

Augmenting Pedagogic Writing Practice with Contextualizable Learning Analytics

Antonette Aileen Shibani Michael Xavier

B.E. (with Distinction) in Computer Science Engineering
Anna University (India), 2010

M.Sc. in Information Studies
Nanyang Technological University (Singapore), 2012

Thesis submitted in partial fulfilment of the requirements for the degree of
Doctor of Philosophy

University of Technology Sydney

Connected Intelligence Centre

October 2019

Antonette Shibani (2019). Augmenting Pedagogic Writing Practice with Contextualizable Learning Analytics.

Supervisors:

Prof. Simon Buckingham Shum, University of Technology Sydney

Dr. Simon Knight, University of Technology Sydney

Certificate of Original Authorship

I, Antonette Aileen Shibani Michael Xavier declare that this thesis, is submitted in fulfilment of the requirements for the award of Doctor of Philosophy, in the Connected Intelligence Centre at the University of Technology Sydney.

This thesis is wholly my own work unless otherwise referenced or acknowledged. In addition, I certify that all information sources and literature used are indicated in the thesis.

This document has not been submitted for qualifications at any other academic institution.

This research is supported by the Australian Government Research Training Program.

Signature: Shibani

Date: 16/10/2019

Dedicated to my parents

Prof. Dr. Leema Rose, my darling mother and confidante, who taught me kindness, hard work, and gratitude towards all things in life.

Mr. Michael Xavier, my loving father and pillar of support, who seeded confidence and trust in his little girl to conquer the big wide world.

Acknowledgements

I owe a ton of gratitude to people for their support in my doctoral learning journey. The journey has transformed me as a person and a researcher to become more critical, inquisitive, and reflective in my thinking.

Firstly, my sincere gratitude to my supervisors Prof. Simon Buckingham Shum and Dr. Simon Knight for their guidance throughout my PhD – I have definitely learnt from the best. Their sense of responsibility in going above and beyond to assist a student never ceases to amaze me.

I remember the warm welcome I received from Simon Buckingham Shum on the day I arrived at UTS, and the warmth has never faded since. With his ideological and innovative outlook, Simon has shaped my thinking and made me question my understandings. Thank you, Simon, I have been incredibly lucky to work with you, and learned so much from you. Simon Knight has been an amazing colleague and mentor, to whom I can turn to at any time. With his pragmatic thinking and way to question everything, he has taught me the value in constructive conflict, amongst many more. Thank you, Simon, for putting up with my seemingly naïve questions at times and guiding me to be a responsible researcher. My constant scramble having to address both Simon and Simon without confusing others hasn't been so bad after all, with the other perks that came with them!

Thanks to the enthusiastic instructors who brought life to the project in their classrooms and trusted me with their students. They are the true champions in making the innovations effective by making them practically feasible. Special thanks to Dr. Philippa Ryan who first implemented the project with her students in Law and the tutors. My sincere thanks go to Dr. Nicole Sutton, Raechel Wight and the tutors for their dedicated involvement in the project with Accounting. I'm also grateful to the students who participated in the research studies that form the basis of my empirical work. Their feedback and involvement have contributed to improvements for the future and helped us rethink what we were building.

My deep appreciation goes to my colleagues at the Connected Intelligence Centre for the conversations and feedback that have tuned my thinking in my research and beyond – in particular, Kirsty Kitto, Roberto Martinez, and Andrew

Gibson. My sincere thanks to CIC's web developer Radhika Mogarkar, who played a big role in bringing the tool into production use for large cohorts of students. Thanks also to Gabrielle, Emma, and Ratha for taking care of anything that needs fixing. Thanks to the #PhDGang for making the hard PhD life enjoyable with your presence and cheerfulness. To all CICers, thanks for being part of the wonderful family of lab colleagues.

I'm grateful for the support of Agnes Sandor and Claude Roux from Naver Labs Europe (previously, Xerox Research Centre Europe) for developing the Natural Language Processing Parser on which the writing feedback tool is built. My sincere thanks goes to my internal reviewers Lori Lockyer and Jo McKenzie, UTS, for reviewing my thesis and providing feedback on my initial draft. Thanks to Elizabeth Koh from the National Institute of Education, Singapore, for paving the way for my research career. Thanks also to the reviewers and friends who have provided valuable feedback on my work.

I gratefully acknowledge the financial support and scholarships I received towards presenting my PhD work at research conferences. Thanks to ACM-W, Society for Learning Analytics Research, Asia-Pacific Society for Computers in Education, UTS Vice-Chancellor's conference fund, and the Connected Intelligence Centre, UTS for the sponsorship.

I have been tremendously supported by my family, to whom I'm very grateful. Huge thanks to my husband Vignesh who endured the best and worst of me during this challenging phase of life. He's been that caring, respectful, and loving partner everyone yearns to get, and I'm incredibly lucky to have him stand by me. Thanks to my parents, brother Sheen and his family, and relatives back in India for their encouragement, prayers and constant support throughout the years. Thanks to my dear friends who are always there for me. It's their emotional support that kept me sane and smiling during the long hours I put into this PhD. Last but not the least, I believe that nothing would have been possible if not for the blessings of the Almighty. Thank you, God, for the strength, opportunities, and protection you offer me every single day.

Preface

The following peer-reviewed publications produced during the PhD candidature contribute to my thesis.

Journal Papers

- **Antonette Shibani**, Simon Knight, and Simon Buckingham Shum (Under review) Educator Perspectives on Learning Analytics in Classroom Practice.
- Simon Knight, **Antonette Shibani**, Sophie Abel, Andrew Gibson, Philippa Ryan, Nicole Sutton, Raechel Wight, Cherie Lucas, Ágnes Sándor, Kirsty Kitto, Ming Liu, Radhika Vijay Mogarkar, and Simon Buckingham Shum (Under review) AcaWriter: A Learning Analytics Tool for Formative Feedback on Academic Writing.

Sources & Original Work

The thesis draws from original material of my own work in the publications listed above, to which I retain copyright permissions as an author of the work. Such prior publications when used in the thesis are explicitly cited where appropriate, and are not used in entirety. Publications of external authors are credited throughout the thesis with citations in text and references at the end of the thesis. Figures from external sources where authors granted permission for usage are cited in their captions.

Ethics

The research designs in the study are approved by the University of Technology Sydney's Human Research Ethics Committee, and are based on ETH16-675: Academic Essay Self-Assessment Project (AESA Project). The ethics applications subsequently revised for the studies in the thesis have the protocol numbers ETH17-1176, ETH18-2263, ETH18-3080, and ETH19-3475. The most recent participant information sheets and consent forms can be requested by email¹.

Abstract

Academic writing is a key skill that contributes to essential learning outcomes for higher education students. Despite its importance, students often lack proficiency in writing and find it challenging to learn. While previous research suggests that students' writing skills are enhanced through formative feedback, the time-consuming nature of providing formative feedback on individual student drafts, especially in large cohorts, makes it impractical for educators to provide detailed writing support in this way. A promising approach, therefore, is the use of *writing analytics* to provide automated formative feedback on writing. This particular form of *learning analytics*, using computational techniques and natural language processing, provides timely, immediate, and consistent automated feedback to help students improve their writing. However, for such tools to work effectively in pedagogic settings, and be adopted by practitioners, academics need to feel a sense of ownership over how the tool fits into their practice. This recognition motivates an increased emphasis on aligning learning analytics applications with learning design, so that analytics-driven feedback is congruent with the pedagogy and assessment regime.

The thesis investigates how writing practice can be augmented with a writing analytics tool called 'AcaWriter' by aligning it with learning design. The approach is evaluated across two disciplines in authentic higher educational settings using a design-based research approach. Mixed methods and multiple data sources are used to examine how students perceive and interact with automated feedback, and revise their writing. Based on this analysis, the thesis provides empirical evidence that students found the writing intervention and automated feedback from AcaWriter useful, and improved their subject-related writing skills, thus validating its applicability in writing contexts. It identifies varied levels of student engagement with automated feedback and ways to scaffold its application for effective use. Cross-fertilizing research and practice, the key insights gained from these design iterations are formalised as the *Contextualizable Learning Analytics Design* model. The model clarifies how the features, feedback and learning activities around AcaWriter can be tuned for different pedagogical contexts and assessment regimes, by co-designing them

with educators. The thesis also studies the perspectives of educators, who play a key role in implementing such learning analytics innovations in their classrooms. The thesis advances theory and practice in the development of flexible learning analytics applications, capable of providing meaningful, contextualized support that enhances learning, and adoption by practitioners in authentic practice.
