

**Factors Driving Individuals' Behavioural Intention  
to Use Cryptocurrency in Saudi Arabia**

**BY**

**SAAD ALAKLABI**

A THESIS SUBMITTED IN FULFILMENT OF THE REQUIREMENTS

FOR THE DEGREE OF

**DOCTOR OF PHILOSOPHY**

Under the supervision of

Dr. Kyeong Kang and Dr. Osama Sohaib

University of Technology Sydney

Faculty of Engineering and Information Technology

April 2022

# Certificate of Original Authorship

I, Saad Alaklabi declare that this thesis, is submitted in fulfilment of the requirements for the award of Doctor of Philosophy, in the Faculty of Engineering and Information Technology at the University of Technology Sydney.

This thesis is wholly my own work unless otherwise referenced or acknowledged. In addition, I certify that all information sources and literature used are indicated in the thesis.

This document has not been submitted for qualifications at any other academic institution.

This research is supported by the Australian Government Research Training Program.

**Signature:**

Production Note:  
Signature removed prior to publication.

**Date:** 20 Aug 2022

# Acknowledgement

First, I would like to start by thanking "Allah", my Lord, for giving me the strength and ability to reach this point in my study journey.

My sincere thanks go to my mother and father for their continuous prayer and encouragement. Besides my parents, I would like to thank my brothers and sisters for supporting me spiritually throughout my research and life. Also, I would like to extend my thanks to my lovely wife Asmaa and my children Fayez and Tuqa for their motivations, patience, and sharing this journey with me.

I also would like to express my sincere gratitude to my supervisors, Dr Kyeong and Dr Osama, for their continuous support of my PhD study and guidance during my study.

I am very grateful to my great uncle Dr Saud Alaklabi for his support during my study journey. He used to back me up and encourage me during my scholarship.

Many thanks are also due to my friends Saleh Alharbi and Abdullah Alshamrani, who supported me at the beginning of my PhD journey. Also, I would like to thank Dr Cherry Russell and Gordana Ristic for providing proofreading service for my thesis.

Last but not least, I would like to thank all of the friends I met during my PhD study who were there when needed.

## List of Publications

The following research papers were published from work undertaken by the author during this PhD research study.

## Abstract

Although globalisation and new advanced technologies have brought numerous benefits to humankind in the last 30 years, they have also caused numerous concerns and corporate scandals, leading to the emergence of the first digital currency, Bitcoin, after the global crisis of 2008. Since then, cryptocurrency uses and uses cases have grown exponentially yet remain limited in scope and geographical dispersion. Also, despite the growing interest of the scientific community and both official and private stakeholders in the topic, scholarly research on the factors influencing individuals' intention to use cryptocurrency is still scarce and provides contradictory evidence regarding some factors. Also, several factors from the technology adoption field had never been tested in the cryptocurrency field. Moreover, several regions have been excluded from prior research, including Saudi Arabia, with no previous empirical research on this topic.

For these reasons, the purpose of this study was to explore the factors driving individuals' behavioural intention to use cryptocurrency in Saudi Arabia by employing a unique research model based on the theory of reasoned action and extending with several external factors which some have not yet been tested in the field of cryptocurrency use. Data are obtained from September to November 2019 by a quantitative research methodology – an online, self-administered survey and analysed by several statistical techniques. The study's final sample included 181 respondents, citizens of Saudi Arabia.

This study has confirmed some previous study results and came with new findings. The attitude was the most significant predictor of intention to use cryptocurrencies in Saudi Arabia, with a direct and positive effect. Subjective norm was also a significant predictor of Saudis' intention to use cryptocurrencies, having a positive direct effect. The additions to the original TRA model, namely perceived usefulness, perceived enjoyment, and

personal innovativeness, were found as statistically significant predictors of both attitude and intention to use cryptocurrencies with a positive effect. In contrast, privacy risk and financial risk were found as statistically significant predictors of attitude and intention to use cryptocurrencies with a negative effect. Security risk was not a significant predictor of the attitude and intention of Saudi residents to use cryptocurrencies.

This study contributes to both theory and practice by extending the TRA model with a range of external factors enabling the assessment of the factors affecting the intention to use cryptocurrency from human, financial and security perspectives and providing the first empirical data on this topic in Saudi Arabia. The study also enables further research on this topic and comparing study results, thus improving understanding of the phenomenon. It also provides various stakeholders with valuable information and recommendations regarding cryptocurrency use, enabling them to make better decisions in this area.
