

Data Journalism in Indonesia in the Time of Hoaxes

Adek Roza

A thesis submitted in fulfilment of the requirements
for the degree of Doctor of Philosophy
Faculty of Arts and Social Sciences
University of Technology Sydney

2022

Certificate of Original Authorship

I, Adek Roza, declare that this thesis is submitted in fulfilment of the requirements for the award of Doctor of Philosophy in the School of Communication, Faculty of Arts and Social Sciences, at the University of Technology Sydney.

This thesis is wholly my own work unless otherwise referenced or acknowledged. In addition, I certify that all information sources and literature used are indicated in the thesis.

This research is supported by the Australian Awards Scholarship organised by Australian Government Department of Foreign Affairs and Trade

Signature of student: Production Note:

Date: 3rd July 2022

Acknowledgements

I would like to thank the Australian Government for supporting my doctoral research through an Australia Award Scholarship and University of Technology Sydney (UTS) International staff who worked tirelessly to ensure my research journey went smoothly.

Words cannot express my gratitude to my principal supervisor, Dr Catriona Bonfiglioli, for her invaluable guidance, patience, and feedback. I would also like to thank my co-supervisor, Dr Anne Kruger, for sharing her knowledge to enrich my thesis.

This endeavour would not have been possible without the guidance and support from the UTS Graduate Research School staff, the research office at the Faculty of Arts and Social Sciences and the FASS IT team, and staff at UTS Library.

I could not have undertaken this journey without my academic colleagues in the UTS Higher Degree Research workspace and Scholar Centre. I also thank my Indonesian friends who were on hand anytime for help.

I am indebted to my research participants, who generously allocated their time, shared valuable knowledge, and facilitated my data collection.

I would acknowledge the editorial assistance of professional editor Dr Terry Fitzgerald in giving this thesis a final shape.

I would be remiss in not mentioning my family. It was my parents who always put education first and my siblings who always encouraged me to study. I dedicated this work to my wife, Nur, and my children, Kirana and Bianka. Their love and belief in me have sustained my spirits and motivation.

Abstract

News media outlets in Indonesia have been struggling to maintain their businesses and roles in society in these challenging times. News outlets have dealt with the digital disruption that has been decimating the news industry during the past ten years. In that period, Indonesia has also held three contentious elections – the presidential elections of 2014 and 2019 and the Jakarta gubernatorial election of 2017 – all of which were affected by hoaxes and disinformation on social media platforms. Hence, news media outlets striving to find sustainable business models are now facing a complex information ecosystem that demands rigorous verification.

This thesis examines how local Indonesian media outlets have adopted data journalism to fight against hoaxes and disinformation and to support their businesses. It also explores how some government institutions have implemented data journalism skills to improve their websites and public communications. Through a thematic analysis of rich natural data, semi-structured interviews, and a case study of five online news outlets, this research has revealed the changes brought by data journalism in Indonesian newsrooms and how agents outside the journalistic field are influencing the development of data journalism.

After presenting the current news media situation in Indonesia as a background and applying the propaganda model, this study demonstrated the challenges the news industry players faced in the wake of the digital disruption caused by the arrivals of new players in the journalistic field. The established players have been forced to improve their journalism products by adopting data journalism. As well, the impact of the government's micro-level policy and human resources on data availability is a key obstacle to the performance of data journalism. Yet, these obstacles are not discouraging journalists. News outlets that are not affiliated with legacy media organisations appear to have greater capacity to adapt to the new journalistic genres.

This thesis offers a picture of the dynamics of news production in Indonesia: the emerging new roles in the newsroom, the supporting roles that have become

instrumental, and how journalists need to distribute their authority and renegotiate journalistic doxa to maintain their journalistic cultural capital and at the same time strengthen their economic capital. On a macro level, this research has identified interactions between news outlets, technology companies, not-for-profit organisations, and government institutions crucial to the adoption of data journalism.

This study's findings provide a timely critique of the role of journalism in Indonesia against a backdrop of digital disruption of the news industry in an era of disinformation. This thesis suggests that rather than competing with social media in terms of speed and productivity, news media need to embrace journalistic cultural capital, including intelligent commentary, accuracy, and clarity. It also encourages news outlets and their journalists to deploy technology and collaborate to improve the quality of their work and to initiate new business models.

Keywords: Indonesia's news media, data journalism, digital disruption, hoaxes and disinformation, field theory, government public relations.
