

# **DESIGNING A QUALITY MANAGEMENT SYSTEM FOR A CAMBODIAN UNIVERSITY**

By

Chhang Rath

A thesis presented to the University of Technology, Sydney

In partial fulfilment of the requirement for the degree of Doctor of Education

December 2010

## **Thesis Certification**

The work presented in this thesis is, to the best of my knowledge and belief, original except as acknowledged in the text. I hereby declare that I have not submitted this material, either in whole or in part, for a degree at this or any other institution.

.....

## **Abstract**

Quality assurance has been a legislative requirement in Cambodian universities since 2003, yet it is still a relatively new concept. A formal quality-management framework at a systemic level does not yet exist and little attention has been paid to this in the higher education sector. This has led Higher Education Institutions (HEIs) to make ad hoc decisions in dealing with quality issues. Despite some institutions having appointed dedicated quality assurance officers, there is little evidence of a quality management culture in Cambodian universities. For these reasons, the creation of a formal quality management system is imperative in order to ensure that universities conduct their operations effectively and can operate in a global higher education context.

The study has documented and analysed the issues, structures and processes of quality management in higher education in England, Australia and Thailand. This analysis has been applied to the Cambodian context in order to develop a relevant quality management framework for a particular Cambodian university (City University). This framework may also serve as a model for other higher education institutions in Cambodia.

The study included an analysis of the extensive literature related to the quality management systems currently employed in universities in England, Australia and Thailand. Senior managers, academics and staff in three Thai universities and in higher education institutions in Cambodia were surveyed and interviewed. This dual approach allowed the examination of the benefits and disadvantages of applying the features of externally established quality management systems to the Cambodian context.

Higher education institutions, in particular public universities, face many constraints and challenges in Cambodia, including scarcity of resources, poor governance, lack of autonomy, no culture of quality, poor human resource development and the like. These constraints prevent a standard Western-style system from being introduced into Cambodia in the short term. Nonetheless, it is imperative that Higher Education Institutions establish a formal and non-punitive quality management system. Introduction of a quality management system in two phases is recommended.

The first phase of the quality management system consists of simple, basic and general elements of quality with a view to establishing a quality culture in every academic's mindset, and permeating the ideals of a quality management programme throughout the entire

university population. When a culture of quality management is well embedded, the next phase could be implemented. This second phase introduces broader and higher level elements of quality, such as benchmarking, student attributes and a national qualifications' framework, closely linking internal quality management systems and external regulatory requirements to ensure consistency in the quality of graduates across the higher education sector, as well as attaining national, regional and international recognition.

The quality management model proposed will be an important contributor to reshaping and improving quality practices in higher education, as well as informing future key planners and higher education policy makers about quality management in Cambodia.

## **Acknowledgements**

I would like to express my profound thanks to the following people for their support and contribution to this thesis.

First and foremost, I would like to express my profound gratitude to my supervisors Professor Mark Tennant and Professor Tony Moon for their constructive feedback on my thesis. I would not have completed it without their practical support and valuable assistance.

Second, I would like to dedicate my deep gratitude to Professor Geoff Scott for his explicit guidance and constructive feedback on my research proposal. Then, my heartfelt thanks also go to Professor Alison Lee, who was a coordinator of the coursework program in the Faculty of Education, for her guidance in research methodology and design.

Third, I would like to extend my profound appreciation to administrative and support staff in the Faculty of Arts and Social Sciences for their assistance and support; especially the IT persons who provided me with quick and responsive assistance which made it possible for me to write up the thesis.

Last but not least, I am particularly grateful to academics, staff and managers in both Cambodia and Thailand who participated in this research and made it possible for me to conduct my fieldwork. Without their participation and contribution, the purpose of this research would not have been achieved.
