

**SEC REPORTING RESTRICTIONS IN THE MINING INDUSTRY: AN  
EXAMINATION OF THE MODELLING AND VALUE-RELEVANCE OF GOLD  
RESOURCE ESTIMATES**

Stephen E. Kean

A thesis submitted in fulfilment of the requirements for the degree of  
Doctor of Philosophy

June 2013

Accounting Discipline Group  
Business School  
University of Technology, Sydney

Supervised by:

Professor Andrew Ferguson

Professor Philip Brown

Professor Martin Bugeja

## **AUTHORSHIP/ORIGINALITY STATEMENT**

I certify that the work in this thesis has not previously been submitted for a degree nor has it been submitted as part of requirements for a degree except as fully acknowledged within the text.

I also certify that the thesis has been written by me. Any help that I have received in my research work and the preparation of the thesis itself has been acknowledged. In addition, I certify that all information sources and literature used are indicated in the thesis.

Signed .....

Date.....

## **ACKNOWLEDGEMENTS**

I acknowledge the contribution of my supervisors: Professor Andrew Ferguson, Professor Philip Brown and Professor Martin Bugeja. Their guidance and patience has been invaluable and generously abundant.

I would also like to thank all who provided assistance throughout the years: Professor Zoltan Matolcsy and Professor Anne Wyatt for their supervision in the early stages, the various members of ‘Team Ferguson’ for sharing an active interest in mining-related accounting research, visiting academics Professor Dan Dhaliwal, Professor Joe Weber, Professor Peter Easton and Professor Katherine Schipper for their advice, and the participants of the UTS Accounting Discipline Group seminar series, AFAANZ Doctoral Symposium, EAA Doctoral Colloquium and JCAE Doctoral Consortium for listening to my presentations and providing me with helpful feedback.

Lastly, I need to thank the generous financial contributions of the UTS Accounting Discipline Group, and the AFAANZ/CPA Australia/ICAA/NIA.

## Table of Contents

List of Figures and Tables	vi
List of Acronyms	xi
Abstract	xii
1.0 Introduction	1
2.0 Institutional Background: resource reporting	7
2.1 The mining cycle	7
2.1.1 The exploration and development stage of the mining cycle	7
2.1.1.1 The exploration sub-stage of the mining cycle	7
2.1.1.2 The development sub-stage of the mining cycle	10
2.1.2 The production stage of the mining cycle	11
2.1.3 The rehabilitation stage of the mining cycle	13
2.2 Financial reporting	14
2.2.1 Exploration and development costs	14
2.2.2 Production profits, including anticipated rehabilitation costs	17
2.2.3 Implications of financial reporting methods	19
2.3 Resource reporting codes	21
2.3.1 The PRMS	22
2.3.2 The JORC Code, SME Guide and CIM Definition Standards	23
2.3.3 SEC Industry Guide 7	29
3.0 Hypotheses	34
3.1 Resource disclosure as supplementary disclosure	34
3.2 Resource disclosure as voluntary disclosure	38
3.3 Resource disclosure as regulated disclosure	42
3.4 The determinants of revisions of resource estimates	52
3.4.1 The determinants of revisions of contingent resource estimates into reserves	52
3.4.2 The determinants of revisions of inferred resource estimates into developed resources	54
3.4.3 The determinants of revisions of inferred resource estimates into reserves	55

4.0	Data and Research Design	56
4.1	Sample and data sources	56
4.2	Variable measurement	60
4.3	Empirical modelling	67
4.3.1	The components of estimates of total resources	67
4.3.1.1	Predicting future changes in reserve estimates	67
4.3.1.2	Price-sensitivity	68
4.3.2	Gold price movements	72
4.3.3	Exploration expenditure	75
4.3.4	The proportion of developed resources that are reserves	76
4.4	Inferrability issues	77
4.4.1	Development focus	78
4.4.2	Project expansion	79
4.4.3	Survivorship bias	80
4.4.4	Estimation conservatism	80
4.4.5	Differences in the definition of reserves across resource reporting codes	83
4.4.6	Non-linearity	84
5.0	Results	86
5.1	The components of estimates of total resources	86
5.2	Gold price movements	88
5.3	Exploration expenditure	91
5.4	The proportion of developed resources that are reserves	93
5.5	Additional tests	94
5.5.1	The proportion of mineralised material that is inferred resources	94
5.5.2	Separate time periods: 1995-2000 and 2001-2008.	97
5.5.3	Utilising the market price from three months after the financial year end	99
6.0	Conclusion	100
6.1	Limitations and future research	104

## **Abstract**

*I investigate the information content of gold mining firms' estimates of contingent and inferred resources. Contingent resources are distinguished from reserves because contingent resources are not economically viable under current conditions. Inferred resources are distinguished from the others in that they are too preliminary for a reliable assessment of their economic viability. Disclosing these two categories is required in Australia and Canada, but prohibited in the USA by SEC Industry Guide 7. I examine the informativeness of resource estimates in two ways: the association with ex post changes in reserve estimates, and the association with market prices. Following the resource reporting framework, I provide evidence that contingent resources are informative when considered together with gold price movements, and inferred resources are informative when considered together with exploration expenditure and the commercial viability of developed resources. I also provide evidence that the decomposition of estimates of mineralised material into contingent and inferred resources is only weakly associated with corporate disclosure allowed by the SEC. My results inform the regulatory debate over the harmonisation of resource reporting codes by highlighting the utility of the prohibited categories. My result also contributes to the literature that has hitherto focused on reserve estimates. It would appear that, while the SEC prohibition is motivated by concerns of investors being 'misled,' by distorting the disclosure of useful information, the SEC is increasing investor confusion.*
