Clothing Comfort, Health and Wellness in General Duty Police Load Bearing Vests from 2008 to present day.

Novel development possibilities in advanced textiles and garment design, that can be derived from motorcycle wear and sports wear.

Shelden Vaughan
A thesis submitted for the degree of Master in Design
2012

University of Technology, Sydney (UTS), Australia.
Certificate of Authorship/Originality

I certify that the work in this thesis has not previously been submitted for a degree nor has it been submitted as part of requirements for a degree except as fully acknowledged within the text.

I also certify that the thesis has been written by me. Any help that I have received in my research work and the preparation of the thesis itself has been acknowledged. In addition, I certify that all information sources and literature used are indicated in the thesis.

Date:
Acknowledgments

I would like to acknowledge my Supervisor, Alana Clifton-Cunningham and express my sincere thanks to her for all her patience, dedication, encouragement and guidance during this design masters.

Professor Marie O’Mahony inspired me to write this thesis originally and drove my interest in technical textiles and technical fashion design.

For their ongoing support, I thank my parents Peter and Jennifer and my sister Tennille and her husband Jason and my brother Keir. To Carlos, you have always supported me and I always appreciate this.

To my dear partner, Milena, thank you for all you encouragement, you helped me to get there in the final months with your kindness.

I dedicate this work to my late Uncle Barry Breen, who always believed in me and who always wanted the best for me.
Contents

I. Chapter 1: Introduction to the thesis 12
   1.1.1 The duty belt as used by General Duty Police Officers 13
   1.1.2 The load bearing vest as used by General Duty Police Officers 15
   1.2 Significance of the Research 20
      1.2.1 General Duty Police Injuries related to the duty belt: An International perspective 21
      1.2.2 The broader research perspective 22
      1.2.3 Novel solutions that may be derived from motorcycle and sportswear design 26
      1.2.4 Considerations around equipment innovations 27
      1.2.5 Incorporating ballistic protection into load bearing vests 27
   1.3 Cultural issues related to policing, modern policing and the need for new technologies 30
      1.3.1 The problematic and why police forces have perceived that they have needed to go high tech 31
      1.3.2 The evolution of the New South Wales Police uniform 35
      1.3.3 The tasks that New South Wales General Duty Police undertake on a daily basis 36
   1.4 Thesis plan: Outline of the chapters 48

II. Chapter 2: Literature Review 50
   2.1 Soldier modernisation in Australia 50
   2.2 Canadian Army soldier burden analysis 56
   2.3 Science in clothing comfort 66
      2.3.1 Components of clothing comfort 67
   2.4 Improving comfort in clothing 69
   2.5 Sam Browne and Beyond: A Look at Duty Belts 70
      2.5.1 Who was Sam Browne? 70
      2.5.2 Ergonomic considerations 71
      2.5.3 Considerations for Women 71
   2.6 Updating Sam Browne: Designing better load bearing systems for the modern Peace Officer 79
      2.6.1 Regarding the abstract to this journal article 79
      2.6.2 Introduction 79
      2.6.3 Literature review within the article 80
   2.7 Ergonomic load bearing systems 82
   2.8 Battle rattle: The stuff a soldier carries 85
      2.8.1 The vest system 85
      2.8.2 The RACK 86
   2.9 Future Soldier – Expanded System: Rheinmetall to supply the Bundeswehr with cutting-edge “Gladius” infantry equipment 87

III. Chapter 3: A Critical analysis of the New South Wales load bearing implementation 92
   3.1 New South Wales Police load bearing vest design analysis 93
## Contents

3.1.1 Incorporating ballistic protection into load bearing vests; Strategic design considerations 3.1.2 User comfort and wellness; Thermal management analysis 3.1.3 Wear-ability considerations in garment design 3.1.4 The physiological & biomechanical aspects of load carriage 3.1.5 The biomechanics of the human spine: Loads on the spine 3.1.6 The biomechanics of the human spine: Common injuries of the back 3.1.5 Future procurement considerations 3.1.8 New South Wales Police Annual Report 2011 3.2 International police load bearing vests; a general design analysis 3.2.1 British general duty police load bearing vests 3.2.2 US general duty police load bearing vests 3.2 International police load bearing vests; a general design analysis

### IV. Chapter 4: Garment design or multi-performance

4.1 Advanced textiles; Applications for health and wellbeing 4.1.1 Advanced textiles for climate control; Three-dimensional (3D) spacer textiles 4.1.2 Wool as a wicking layer 4.1.3 Phase change materials (PCM) 4.1.4 Hard and soft textile combinations in garment design 4.1.5 Textiles finishes for climate control 4.1.6 Advanced textiles: Innovations that inform garment design 4.2 Hard and soft textiles: A Dainese® motorcycle safety wear product study 4.2.1 Fitting comfort; ergonomics related to garment construction 4.2.2 Ergonomics related to load carriage 4.3 User comfort and wellness 4.3.1 Comfort and wellness in clothing design 4.3.2 Clothing layering for comfort and wellness; Thermal management for comfort 4.3.3 Introducing the load bearing vest into Police Forces: Occupational Health & Safety (OH&S) considerations 4.3.4 Considerations around duty equipment innovations 4.3.5 Chapter conclusion

### V. Chapter 5: Conclusion

5.1 Research methodology discussion and the significance of the research 5.1.1 The significance of the research, new contributions to the field of load carriage 5.1.2 Discussion around the research methodology used in this research study
Contents

5.1.3 The limitations and subsequent implications of these limitations related to this research study 174

5.2 Overview of the thesis structure and main findings 175

5.2.2 The main findings of this research study; New knowledge and information that has been discovered 176

5.3 Future research and design development recommendations 178

5.3.1 Recommendation: Advanced technical textiles, textile finishes 178
5.3.2 Recommendation: Garment layering to enhance climate control; 179
5.3.3 Recommendation: Strategies to reduce the load carriage burden to General Duty Police Officers; 179
5.3.4 Recommendation: User field trials for prototype General Duty Police load bearing vests; 179
5.3.5 Recommendation: Hard and soft textile combinations in load bearing vest design and fabrication; 180
5.3.6 Recommendation: Ballistic and stab proof protection; 180
5.3.7 Recommendation: Deploying load bearing vests in conjunction with high visibility garments; 180
5.3.8 Recommendation: Occupational Health and Safety (OH&S) - The physiological and biomechanical aspects of load bearing vest design; 181
5.3.9 Recommendation: Creation of strategic industry partnerships with major specialist manufacturers of technical garments; 182
5.3.10 Recommendation: Creation of an International research collaboration around load bearing vest implementation programmes into major Police Forces; 182
5.3.11 Recommendation: Monitoring health and wellness in General Duty Police Officers; 183
5.3.12 Recommendation: Sourcing of lightweight energy storage hardware for electronic duty gear; 183

Abstract

This research document reveals recent developments in advanced textiles and in technical garment design which may assist in the design development of human load carriage garments. From discussions into human load bearing systems, load bearing garments, advanced textiles for comfort, health and wellness derived from motorcycle and sportswear, reviewers will learn that there are a multitude of novel possibilities available to assist them in the development of future load bearing vests for Police Officers and Emergency Service Personnel.

Motorcycle wear is generally well advanced in terms of providing high levels of user protection aimed towards reducing injury and improving user health and wellness through enhancing factors such as climate control (breathability) and increased movement. Through the use of advanced textiles in modern motorcycle wear and by the way in which these garments are constructed structurally, they provide a much higher level of protection than what was previously available to motorcyclists. Likewise, sportswear has increasing become more high-tech, as athletes have demanded so much more of the garments they use. Increasing performance characteristics such as improving climate control for example, can significantly enhance user performance, health and wellbeing. This research document further explores motorcycle wear and sportswear as being relevant areas of garment design that may assist in informing load bearing vest design.
Glossary of Terms

3D  Three dimensional
ABS  Australian Bureau of Statistics
APPOINTMENTS  Terminology that NSW police use to describe the equipment that they carry such as handcuffs, their pistol etc.
BACKPACK  Another term used for a rucksack, or a haversack.
BOBBY  Colloquial term for a police officer from Great Britain.
CAPSICUM SPRAY/PEPPER SPRAY  An aerosol spray containing oils derived from cayenne pepper, irritating to the eyes and respiratory passages and used as a disabling weapon. This term is used in Australia only.
COMPOSITE TEXTILE  Is defined as a combination of two or more materials (reinforcing elements, fillers, and composite matrix binder), differing in form or composition on a macro scale. The constituents retain their identities, that is, they do not dissolve or merge completely into one another although they act in concert.
CORDURA  A material
DUTY BELT  The belt that a police officer uses to carry equipment
EQUIPMENT BELT  Another name for a duty belt.
GPS  which stands for Global Positioning System, is a radio navigation system that allows land, sea, and airborne users to determine their exact location.
LBV  Load Bearing Vest
LOAD CARRIAGE  The act of humans conveying; carrying load.
NSW  New South Wales
NSWPF  New South Wales Police Force
HWP  Highway patrol
INTERFET  International Force for East Timor
MNWVG  Monocular Night Vision Goggles
NMI neuromuscular incapacitation; when you apply a high-voltage, low-amperage electric charge to muscle tissue, it’s as if you’re overloading its communication system. Taser’s electric pulses cause affected muscles to contract up to nineteen times per second. Under normal conditions, your body moves by relaxing one set of muscles while contracting another. But if an electronic pulse hits your body, both sets of muscles may try to contract at the same time. Generally speaking, the stronger muscles win out. But because the pulses override the commands from your brain, you have no conscious ability to control their movements. As a result, the affected area of your body will tense up as the surrounding muscles contract. You may lose your balance and fall. Depending upon where you’ve been hit, you may not be able to break your fall or catch yourself. That’s why people who have been hit by a Taser sometimes suffer superficial cuts, bumps and bruises.

**LAC** New South Wales Police term for a Local area command

**LOAD BEARING PLATFORM** Another term for a Load Bearing Vest (LBV).

**LOAD BEARING SYSTEM** Another name for a Load Bearing Vest (LBV).

**LOAD CARRIAGE SYSTEM** Another term for a Load Bearing Vest (LBV).

**OC SPRAY** An aerosol spray containing oils derived from cayenne pepper, irritating to the eyes and respiratory passages and used as a disabling weapon.

**OH&S** Occupational Health & Safety, sometimes known as

**PEPPER SPRAY/CAPSICUM** An aerosol spray containing oils derived from cayenne pepper, irritating to the eyes and respiratory passages and used as a disabling weapon.

**PCM** A phase-change material (PCM/Phase Change Textile) is a substance with a high heat of fusion which, melting and solidifying at a certain temperature, is capable of storing and releasing large amounts of energy. Heat is absorbed or released when the material changes from solid to liquid and vice versa; thus, PCMs are classified as latent heat storage (LHS) units.

**RUCKSACK** Another term used for a backpack, or a haversack.

**SA** Situational Awareness is the perception of environmental elements with respect to time and/or space, the comprehension of their meaning, and the projection of their status after some variable has changed, such as time.

**SOPs** Standard operating procedures

**STANO** Soldier surveillance, Target Acquisition and Night Observation

**TASER** Electronic control device. A taser is an electroshock weapon sold by Taser International. It uses electrical current to disrupt voluntary control of muscles causing neuromuscular incapacitation (NMI) - see neuromuscular incapacitation NMI.

**TRANSPORT PHYSICAL OBJECT** Backpack or rucksack

**TWS** Thermal Weapon Sights

**UAV** Unmanned Aerial Vehicle

**WORKCOVER** An organisation in Australia that administers and controls workers compensation.
