2001

UTS: DESIGN,

ARCHITECTURE & BUILDING HANDBOOK

Received on: 31-10-00
CITY CAMPUS
University of Technology, Sydney.
DISCLAIMER
This publication contains information which was current at 1 September 2000. Changes in circumstances after this date may impact upon the accuracy or currency of the information. The University takes all due care to ensure that the information contained here is accurate, but reserves the right to vary any information described in this publication without notice. Readers are responsible for verifying information which pertains to them by contacting the Faculty or the UTS Student Info & Admin Centre.
EQUAL OPPORTUNITY

It is the policy of UTS to provide equal opportunity for all persons regardless of race, colour, descent, national or ethnic origin, ethno-religious background; sex; marital status, pregnancy; potential pregnancy; family responsibilities, disability, age; homosexuality; transgender status; political conviction; and religious belief.

FREE SPEECH

UTS supports the right to freedom of speech and the rights of its members to contribute to the diversity of views presented in our society.

NON-DISCRIMINATORY LANGUAGE

UTS has adopted the use of non-discriminatory language as a key strategy in providing equal opportunity for all staff and students. Guidelines for the use of non-discriminatory language have been developed and all members of the University community are encouraged to use them.

GENERAL INFORMATION

WELCOME

Welcome to the University of Technology, Sydney (UTS), one of the largest universities in New South Wales – a university with an international reputation for quality programs and flexible learning. UTS develops and regularly revises its programs of study in partnership with industry, government and professional bodies, so that its degrees are based on the latest professional standards and current practices. As a result, UTS produces graduates who are ready for work, and this is demonstrated in the high numbers of its students who are members of the workforce within a few months of finishing their degree.

UTS offers its students a lively, supportive and diverse learning environment across three campuses, and a range of social, cultural and sporting facilities to enrich each student’s experience. UTS regards learning as a lifelong experience, and offers a range of programs to cater for the educational needs of people at a variety of stages in their lives, and from diverse backgrounds and cultures.

UTS offers undergraduate and postgraduate degrees, developed by the Faculties of Business; Design, Architecture and Building; Education; Engineering; Humanities and Social Sciences; Information Technology; Law; Nursing, Midwifery and Health; and Science. Each of these faculties is responsible for programs across a number of key disciplines, and many offer courses in conjunction with one another, or with the institute for International Studies. Courses developed and delivered by these faculties reflect the University’s commitment to providing a relevant education to students through flexible and work-based modes of learning and through the ongoing internationalisation of the curriculum.

ABOUT THE UTS HANDBOOKS

Every year UTS produces 10 faculty/institute handbooks which provide the latest information on approved courses and subjects to be offered in the following year. These handbooks include comprehensive details about course content and structure, subject and elective choices, attendance patterns, credit-point requirements, and important faculty and student information. Many of them also contain faculty policies and guidelines for participation in specific courses. This provides students with the necessary information to meet the requirements of the course, complete a program of study, and receive a degree.

UTS also produces a companion volume to these handbooks every year. The UTS Calendar 2001 contains the University Act, By-law and Rules, a list of courses offered across the University, and other useful University information. Copies of the faculty/institute handbooks and the UTS Calendar 2001 are held in the University’s libraries and faculty offices and can be purchased at the Co-op Bookshop. Every effort is made to ensure that the information contained in the handbooks and the Calendar is correct at the time of printing. However, UTS is continuously updating and reviewing courses and services to ensure that they meet needs, current and emerging, and as a result information contained in these publications may be subject to change.

For the latest information, see the University’s website at:
www.uts.edu.au

APPLICATIONS

Undergraduate
The NSW and ACT Universities Admissions Centre (UAC) processes most applications for undergraduate courses which start at the beginning of the year. Students are required to lodge these UAC application forms between August and December; early closing dates may apply to some courses. To find out more about these courses and the application procedures, check the UAC Guide, or the UAC website at: www.uac.edu.au
Students can also apply for entry to some UTS courses by lodging a UTS application form directly with the University. These are usually courses that are not available to recent school leavers and do not have a UAC code.

Postgraduate
Applications for postgraduate courses should be made directly to UTS. For courses starting at the beginning of the year, most applications open in August with a first round closing date of 31 October. For courses starting in the middle of the year, applications open in May. For more information about applying to study at UTS, contact the UTS Student Info & Admin Centre.

International students
International students’ applications for both postgraduate and undergraduate courses can be made either directly to the International Programs Office or through one of the University’s registered agents. For courses starting at the beginning of the year, applications should be received by 30 November of the previous year. For courses starting in the middle of the year, applications should be received by 31 May of that year. For more information, contact the International Programs Office.

Non-award and cross-institutional study
Students who want to study a single subject at UTS which is not part of a UTS degree or qualification, must apply for non-award or cross-institutional study. There are four application periods, and closing dates vary for each semester. For more information contact the appropriate faculty or the UTS Student Info & Admin Centre.

FEES AND COSTS

Service fees
Service fees are charged to students to contribute to the cost of a range of facilities and services which are generally available to all students during the course of their study.

Variations and exemptions
Fees and charges may vary from year to year. In certain circumstances, some students may be eligible for reduced service fees.

For full details of variations and exemptions to the fees listed below, contact the UTS Student Info & Admin Centre.

Fee components

<table>
<thead>
<tr>
<th>Fee component</th>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Union Entrance Fee</td>
<td>a once-only charge for new students</td>
<td>$22</td>
</tr>
<tr>
<td>Union Fee</td>
<td>a semester-based charge for currently enrolled students</td>
<td>$113 per semester</td>
</tr>
<tr>
<td>Students’ Association Fee</td>
<td>a yearly charge for currently enrolled students</td>
<td>$54.40 per year</td>
</tr>
<tr>
<td>Student Accommodation Levy</td>
<td>a yearly charge for currently enrolled students</td>
<td>$58 per year</td>
</tr>
<tr>
<td>Student Identification Card Charge</td>
<td>a yearly charge for students enrolled on a tuition fee basis</td>
<td>$15 per year</td>
</tr>
</tbody>
</table>

1 Charges have been adjusted to reflect the University’s liability for Goods and Services Tax (GST).

Course fees
No course fees are paid by local students undertaking undergraduate studies at UTS. Students are, however, liable for HECS charges (see following page). Many postgraduate courses attract a course fee. These course fees are calculated on a course by course basis and are charged in addition to the service fees outlined above. Payment of course fees may vary depending on a student’s status, and on conditions laid down by the faculty. Please contact the relevant faculty for full details.

Details of course fees are outlined under each course entry in this handbook. Readers should note that fees quoted throughout the handbook are correct at the time of publication however they are subject to change and should be confirmed with the Student Info & Admin Centre.
Course fees for international students
At the time of publication, course fees for undergraduate international students range from $5,000 to $8,250 per semester, and for postgraduate international students from $4,000 to $8,250 per semester. These vary from time to time and the International Programs Office should be contacted for up-to-date information.

International students in Australia on a student visa are required to undertake full-time study as a condition of their visa.

For more information contact the International Programs Office.

Other costs
Students may incur other costs while they study at UTS. These may include books, printed sets of reading materials, photocopying, equipment hire, the purchase of computer software and hardware, and Internet services.

HECS
(Higher Education Contribution Scheme)

HECS is a financial contribution paid to the Commonwealth Government by tertiary students towards the cost of their education. It is payable each teaching period and the amount paid will vary according to the number of credit points undertaken and the method of payment nominated by the student.

Most students have three choices in the way they pay HECS:
1. paying all of the HECS up front and receiving a 25% discount
2. deferring all payment until a student's income reaches a certain level, or
3. paying at least $500 of the HECS contribution up front and deferring the remainder.

Note: These options may not apply to New Zealand citizens and Australian Permanent Residents.

Commonwealth legislation sets strict conditions for HECS over which the University has no control. HECS charges are based on the subjects in which students are enrolled on the HECS census date. It is important for students to realise that any reductions in their academic workload after the census date for a particular semester will not reduce their HECS liability.

Students who defer their HECS payments become liable to commence repayment once their taxable income reaches the repayment threshold. This does not necessarily mean at the conclusion of their studies - a student's income may reach this threshold before then.

New students, students returning from leave and students who are commencing a new or second course, must complete a Payment Options Declaration form. This form must be lodged with the University by the census date and should show a valid Tax File Number.

For Autumn semester, the HECS census date is 31 March, and for Spring semester, the HECS census date is 31 August. HECS census dates for other teaching periods can be obtained from the UTS Student Info & Admin Centre.

There are a number of variations to these guidelines. It is the responsibility of each student to find out which HECS conditions apply to them. Information can be obtained from the booklet HECS Your Questions Answered, which is available from the HECS office on 1800 020 108 (www.hecs.gov.au) or the UTS Student Info & Admin Centre.

FINANCIAL HELP

Austudy/Youth Allowance

Students aged under 25 years, may be eligible to receive financial assistance in the form of the Youth Allowance.

Full-time students aged over 25 years may be eligible to receive Austudy which provides financial help to students who meet its income and assets requirements. Application forms and information about eligibility for Austudy are available from the Student Services Unit at Kuring-gai or City campuses.

Commonwealth legislation sets strict requirements for Austudy/Youth Allowance over which the University has no control. It is important that the students concerned understand these requirements.

Students who receive Austudy and decide to drop subjects during the semester, must be aware that to remain eligible for Austudy they must be enrolled in a minimum of 18 credit points, or have a HECS liability for the semester of 375 equivalent full-time student units. The only exceptions made are for students with disabilities which interfere with their studies, students who are single supporting parents or, in some exceptional cases, those who have been directed by the University to reduce their study load.
For more information, talk to a financial assistance officer in the Student Services Unit.

telephone (02) 9514 1177 (City)
or (02) 9514 5342 (Kuring-gai)

Application forms for both schemes should be lodged as soon as possible with any Centrelink office, or at:

Centrelink Student Services
Parker Street, Haymarket
Locked Bag K710
Haymarket NSW 2000

Abstudy

Abstudy assists Aboriginal and Torres Strait Islander tertiary students by providing income support and other assistance. For more information about Abstudy, contact the staff at Jumbunna, Centre for Australian Indigenous Studies, Education and Research.

Level 17, Building 1 (Tower Building)
telephone (02) 9514 1902

UTS LIBRARY

The University Library collections are housed in three campus libraries which contain over 650,000 books, journals and audiovisual materials as well as a large range of electronic citation and full-text databases. Services for students include assistance in finding information through Inquiry and Research Help desks and online reference assistance, training programs, Closed Reserve, loans, reciprocal borrowing and photocopying facilities. The Library’s extensive range of electronic information resources, such as catalogues, databases and Electronic Reserve, and online services, such as research assistance, online training, loan renewal, reservations and inter-Library requests, can be accessed on campus and remotely 24 hours a day from the Library website.

The Library is open for extended opening hours. More information about the Library can be found at:

www.lib.uts.edu.au

UNIVERSITY GRADUATE SCHOOL

The University Graduate School is a pan-university organisation which enhances the quality of postgraduate research studies and supports research degree students, providing leadership in framing policy for postgraduate development in partnership with the faculties. It provides a contact point for postgraduate research degree students and supports them in their studies.

The University Graduate School is located in Building B2, Blackfriars, City campus.

SUPPORT FOR STUDENT LEARNING

Student Services Unit

To ensure student success, the University provides a range of professional services to support different aspects of student life and learning at UTS.

These services include:

• orientation and University transition programs
• student housing and assistance in finding private rental accommodation
• workshops and individual counselling to enhance effective learning
• assistance for students with disabilities and other special needs
• student loans and financial assistance
• health services
• personal counselling
• assistance with administrative problems or complaints
• assistance when extenuating circumstances impact on study
• help with getting a job
• campus interview program.
All these services are sensitive to the needs of students from diverse backgrounds and are available at City and Kuring-gai campuses with flexible hours for part-timers.

The Student Services Unit website offers a jobs database, 'where UTS graduates get jobs', virtual counselling and links to the 'student help' website:

www.uts.edu.au/div/ssu

Transition to university programs – Orientation 2001

UTS offers a free Study Success program of integrated lectures and activities before semester begins, to help new students manage the transition to university study. There are specially tailored programs for part-time and international students as well as for recent school leavers. Students are informed of academic expectations, the skills needed to be an independent learner, and learning strategies which can help them successfully manage the workload. They are also provided with valuable information about how the University and its faculties operate, and the services provided.

For more information, contact:
Student Services Unit
telephone (02) 9514 1177 (City)
or (02) 9514 5342 (Kuring-gai)

Careers Service

The Careers Service can help students make the link between various UTS courses and the careers they can lead to. The Careers Service also offers general career guidance, and assists with job placement for students seeking industry experience or permanent or casual employment. Contact the Careers Service on:

telephone (02) 9514 1471 (City campus)
www.uts.edu.au/div/cas

Counselling

Counsellors are available at both the City and Kuring-gai campuses for individual consultation. Group programs are also held throughout the year.

For further information, contact:

telephone (02) 9514 1471 (City campus)
or (02) 9514 5342 (Kuring-gai campus)

Telephone counselling is available on (02) 9514 1177.

Health

The Health Service offers a bulk billing practice to students at two locations. For appointments, contact:

telephone (02) 9514 1166 (City campus)
or (02) 9514 5342 (Kuring-gai campus)

Housing

University Housing provides assistance to students in locating private accommodation. A limited amount of UTS-owned housing is also available.

telephone (02) 9514 1509 (listings)
or (02) 9514 1199 (UTS accommodation)

Special Needs Service

The University has in place a range of services and procedures to improve access for students with disabilities, ongoing illnesses and other special needs. Students who have disabilities or illnesses which may impact on their studies are encouraged to contact the Special Needs Service for a confidential discussion of the assistance available.

telephone (02) 9514 1177
TTY (02) 9514 1164
e-mail special.needs@uts.edu.au

Financial Assistance

Financial Assistance staff assist students with personal financial matters and are the contact point for student loans. They can also advise on Youth Allowance, Austudy and other Centrelink benefits.

Computer laboratories
Computer laboratories are located throughout the University and are available for all students and staff to use. Details of locations and availability of the computer laboratories may be obtained from the Information Technology (ITD) Support Centre on:
telephone (02) 9514 2222

Student email accounts
UTS provides students with an email account, which gives all students access to email facilities via the web. To find out more about UTS Email, visit the website:
www.uts.edu.au/email/
Alternatively, pick up the brochure Your UTS Email Account available in all ITD General Purpose Laboratories and drop-in centres. If you have any problems activating your account or with the use of UTS Email, contact the IT Support Centre on:
telephone (02) 9514 2222

Computer training
In general, where computer training is necessary as part of a course that attracts HECS, it is provided as part of that course. Students can also consult the Computing Study Centre (see below).

STUDENT LEARNING CENTRES

Chemistry Learning Resources Centre
The Chemistry Learning Centre assists students in undergraduate courses in the faculties of Science; Nursing, Midwifery and Health; Engineering; and Business.

EQUITY AND DIVERSITY
UTS is committed to equal opportunity and the right of all staff and students to work, study and access services in a university environment which is safe, equitable, free from discrimination and harassment, and in which everybody is respected and treated fairly. The University also aims to assist members of under-represented groups overcome past or present discrimination, and to provide a supportive and open organisational culture in which all students and staff are able to develop to their full potential.

UTS has a strong commitment to ensure that the diverse nature of the Australian society is reflected in all aspects of its employment and education. It is the policy of UTS to provide equal opportunity for all persons regardless of race, colour, descent, national or ethnic origin, ethno-religious background; sex; marital status; pregnancy; potential pregnancy; family responsibilities; disability; age; homosexuality; transgender status; political conviction; and religious belief.

The Equity & Diversity Unit provides a range of services for students and prospective students. These include coordination of the inPETS Educational Access Scheme for students who have experienced long-term educational disadvantage; coordination of financial scholarships and awards for commencing low-income students; and the provision of confidential advice and assistance with the resolution of discrimination and harassment related grievances.

Freedom of Information
Under the Freedom of Information Act 1989 (NSW), individuals may apply for access to information held by the University. Personal information may also be accessed under the Privacy and Personal Information Act 1998. In addition to the requirements of the Act, UTS has a number of policies which govern the collection and use of private information.

Student complaints
UTS is committed to providing a learning and working environment in which complaints are responded to promptly and with minimum distress and maximum protection to all parties.
All students and staff have a responsibility to contribute to the achievement of a productive, safe and equitable study and work environment at UTS. The University’s procedures for handling student complaints are based on confidentiality, impartiality, procedural fairness, protection from victimisation and prompt resolution.
Students should first raise their complaint directly with the person concerned where possible or appropriate, or with an appropriate person in the faculty or administrative unit concerned. To seek advice and assistance in lodging a complaint, contact the Student Services Unit or the Equity & Diversity Unit.
The Policy on Handling Student Complaints is published on the Rules, Policies and Procedures website at:
CAMPUS LIFE

UTS Union
The UTS Union is the community centre for the University. It provides food and drink services, lounges and recreational areas, comprehensive social and cultural programs, sports facilities and programs, stationery shops, a newsagency and resource centres. Off campus the Union provides access to a ski lodge, rowing club, sailing club, athletics club and basketball stadium.

Students’ Association
The Students’ Association (SA) is the elected representative body of students at UTS; it is an organisation run by students for students. UTS students have the right to stand for election of the SA and to vote in the annual elections. The SA also employs caseworkers to provide advocacy for students on academic and non-academic matters.

PRINCIPAL DATES FOR 2001

January
1  New Year’s Day – public holiday
2  Summer session classes recommence (to 2 February)
4  UTS Advisory Day
5  Closing date for change of preference to the Universities Admissions Centre (UAC), by mail or in person
6  Closing date (midnight) for change of preference to UAC, via UAC Infoline and website (www.uac.edu.au)
8  Formal supplementary examinations for 2000 Spring semester students
12  Last day to submit appeal against exclusion from Spring 2000
19  Final examination timetable for Summer session available
19  Main round of offers to UAC applicants
22–27  Enrolment of new main round UAC undergraduate students at City campus
24  Closing date for change of preference to UAC for final round offers
26  Australia Day – public holiday
29  Public School holidays end

February
2  Final round of offers to UAC applicants
2  Summer session ends for subjects with formal exams
2  Last day to lodge a Stage 2 appeal against assessment grade for Spring semester 2000
5–16  Formal examinations for Summer session
5–23  Enrolment of new students at City campus
9  Third round closing date for postgraduate applications for Autumn semester 2001 (except Faculty of Business – closing date 16 February)
16  Faculty of Business third round closing date for postgraduate applications for Autumn semester 2001
26  Orientation week for new students commences (to 2 March)
26  Release of results for Summer session
28  Union ‘O’ Day – Clubs and activities day
28  Late enrolment day

March
5  Autumn semester classes commence
7  Late enrolment day
9  Last day to lodge a Stage 2 appeal against assessment grade for Summer session
16  Last day to enrol in a course or add subjects
16  Last day to pay upfront HECS or postgraduate course fees for Autumn semester 2001
19  Applications open for Vice-Chancellor’s Postgraduate Research Student Conference Fund (for conferences July – December)
30  Last day to apply to graduate in Spring ceremonies 2001
31  Last day to withdraw from a course or subject without financial penalty

April
12  Last day to withdraw from a course or subject without academic penalty
12–30  Public School holidays
13  Good Friday – public holiday
16  Easter Monday – public holiday
16–20  Vice-Chancellors’ Week (non-teaching)
18–20  Graduation ceremonies (Kuring-gai campus)
25  Anzac Day – public holiday

May
1  Applications open for undergraduate courses, where applicable, and postgraduate courses for Spring semester 2001
7–18  Graduation ceremonies (City campus)
11  Provisional examination timetable available
22  Closing date for applications for Vice-Chancellor’s Postgraduate Research Student Conference Fund (for conferences July – December)
31  Closing date for undergraduate and first round postgraduate applications for Spring semester 2001
31  Closing date for applications for Postgraduate Equity Scholarships for Spring semester 2001
June
1 Final examination timetable available
11 Queen’s Birthday – public holiday
15 Last teaching day of Autumn semester
16 Formal examinations commence (to 6 July)
29 Second round closing date for postgraduate applications for Spring semester 2001

July
2–6 Vice-Chancellors’ Week (non-teaching)
6–23 Public School holidays
16–20 Formal alternative examination period for Autumn semester students
18–26 Enrolment of new students for Spring semester
25 Release of Autumn semester examination results
26 Formal supplementary examinations for Autumn semester students
30 Spring semester classes commence

August
1 Applications available for undergraduate and postgraduate courses for Autumn semester 2002
1 Applications available for Postgraduate Research Scholarships
3 Last day to withdraw from full-year subjects without academic penalty
3 Last day to lodge a Stage 2 appeal against assessment grade for Autumn semester 2001
10 Last day to enrol in a course or add subjects¹
17 Last day to pay upfront HECS or postgraduate course fees for Spring semester 2001
30 Last day to apply to graduate in Autumn ceremonies 2002
31 Last day to withdraw from a course or subject without financial penalty¹
31 HECS census date

September
7 Last day to withdraw from a course or subject without academic penalty¹
7 Applications open for Vice-Chancellor’s Postgraduate Research Student Conference Fund (for conferences January – June 2002)
24–28 Vice-Chancellors’ Week (non-teaching)
24–28 Graduation ceremonies (City campus)
28 Applications open for UTS Academic Internships
28 Closing date for undergraduate applications via UAC (without late fee)
28 Closing date for inpUTS Educational Access Scheme via UAC
28 Public School holidays commence

October
1 Labour Day – public holiday
5 Provisional examination timetable available
15 Public School holidays end
26 Final examination timetable available
31 Closing date for undergraduate applications via UAC (with late fee)
31 First round closing date for postgraduate applications for Autumn semester 2002
31 Closing date for Australian Postgraduate Awards, the R L Wemer and University Doctoral Scholarships
31 Closing date for applications for Postgraduate Equity Scholarships for Summer session

November
9 Last teaching day of Spring semester
10–30 Formal examination period
20 Closing date for applications for Vice-Chancellor’s Postgraduate Research Student Conference Fund (for conferences January – June 2002)
30 Closing date for applications for UTS Academic Internships
30 Closing date for undergraduate applications direct to UTS (without late fee)
December

3 Summer session commences
   (to 1 February 2002)
7 Closing date for undergraduate
   applications via UAC (with late fee)
10–14 Formal alternative examination period
    for Spring semester students
14 Last day for students enrolled in
    Summer session to apply to graduate in
    Autumn ceremonies 2002
19 Release of Spring semester examination
    results
20 Public School holidays commence
    (to 28 January 2002)
25 Christmas Day – public holiday
26 Boxing Day – public holiday

1 HECS/Postgraduate course fees will apply after the
   HECS census dates (31 March and August or last working
   day before). Contact the relevant Faculty Office for further
   information about enrolment and withdrawal deadlines
   for flexible delivery subjects.

Note: Information is correct as at 9 August 2000. The
University reserves the right to vary any information
described in Principal Dates for 2001 without notice.
MESSAGE FROM THE DEAN

I would like to welcome all new and continuing students, both local and international, to the academically diverse Faculty of Design, Architecture and Building. I trust you will find your study here this year both personally challenging and intellectually profitable.

The Faculty of Design, Architecture and Building is centrally located on Harris Street in Ultimo in a large modern, purpose-built building. Our facilities are of the highest level nationally, providing some of Sydney’s best spaces for exhibitions, performances and conferences and include advanced laboratories and workshops for computing, photography, printing and manufacturing technology as well as an exhibition gallery, and even a coffee shop and bistro.

Our Faculty caters to a broad spectrum of people from around the world offering them eight undergraduate degree programs, as well as a large range of postgraduate coursework and research programs. We are committed to innovative interdisciplinary and cooperative practice-based learning as well as maintaining our longstanding traditional belief in professional/vocational education. Furthermore, students are encouraged to explore the full range of elective and interdisciplinary subjects offered by not only the Faculty but the University at large. Increasingly we are recognising the value of research for both staff and students and are proud of our expanding research culture. For students approaching graduation, we invite them to stay at the cutting edge of their profession by committing to a life-long learning program of continuing professional education created and maintained via the Faculty’s strong links with industry and the relevant professional associations.

To complement your studies, I encourage all of you to take full advantage of the large range of cultural and sporting events available through UTS clubs and associations. There is much on offer within the University and the larger Sydney community that can shape and influence your perceptions and your subsequent endeavours. Finally, I wish all of you a rewarding and enjoyable academic year.

FACULTY MISSION STATEMENT

The Faculty’s mission is to provide an environment which encourages a high sense of purpose, superior performance and a vision for national leadership in the areas of design, construction and property education. The Faculty aims to provide opportunities for education, training and research in accordance with international standards of best practice and management. The Faculty aims to fulfil its purpose in the following manner:

1. to provide undergraduate and postgraduate courses that both reflect and advance relevant professional disciplines
2. by way of cooperative education, to enhance the integration of educational programs with professional, industrial, commercial and societal activities
3. to focus and promote a contextual awareness in government and society in those areas of Faculty interest
4. to encourage staff and student research that will advance the Faculty’s purpose
5. to encourage Faculty and staff consulting at an appropriate level that will provide a sharing of Faculty expertise and that will strengthen and develop teaching programs
6. to pursue strategies that will reinforce intra-faculty cooperation in research and teaching and that will promote cooperative ventures externally
7. to promote policies that will enhance the quality of teaching, technical and administrative activity and that will provide for staff development
8. to maintain and promote programs in relevant areas of continuing professional education.

APPLICATIONS

Undergraduate applications
Applicants will only be accepted on the official form available from the University Admissions Centre (UAC), which must be lodged with the UAC by the specified closing date. The UAC publishes a guide every year which details all application requirements, and these should be followed carefully.

The University currently requires all Non-Recent School Leaver applicants for Design to submit to UTS a questionnaire. For Recent School Leaver applicants for BDesign (Fashion and Textile Design), the questionnaire is optional. If a questionnaire is submitted, the applicant may be invited to attend an interview and be allocated bonus points. For all other Recent School Leaver applicants, no questionnaire is required. The questionnaire is available from the UTS Student Info & Admin Centre or the Faculty Office. Please check the UAC Guide for submission deadline.

An Information Evening, covering all relevant information on the Faculty’s courses and application for admission, is held prior to the closing date for applications. UTS normally holds an HSC Advisory Day in early January.

Postgraduate coursework applications
Applicants should complete the Graduate Coursework application form available from the UTS Information Service or the Faculty Office. Applications normally close at the end of October, however later applications will be considered. Some postgraduate awards may have a mid-year intake. Contact the Faculty Office in May for details.

Research degree applications
In the first instance, intending applicants should contact the Associate Dean (Research, Graduate and Industry Programs) on (02) 9514 8791 to discuss their proposed research topic and identification of potential supervisors. Applicants are encouraged to meet with potential supervisors prior to lodging an application. Applicants should complete the Master’s Degrees by Thesis or the Doctoral Degrees application forms, as appropriate. Applications can be lodged at any time during the year.

INFORMATION FOR DESIGN, ARCHITECTURE AND BUILDING STUDENTS

Location and contacts
Student Administration Unit
The Student Administration Unit manages the student administration activities of the Faculty and is responsible for a broad range of activities including: admission; enrolment; graduation; timetabling; course information and promotion; and student progression matters. The Unit is committed to providing a high standard of service to students and Faculty staff.

University Rules

The University's Rules are published in the UTS Calendar and online at:

Students who require assistance with the interpretation of University Rules should contact the Faculty Office.
The UTS Rules and policies can also be viewed on the Internet at:

International studies electives

The Institute for International Studies at UTS offers electives in language studies and in the study of contemporary societies in parts of the non-English-speaking world. All subjects are taught over one semester and have a value of eight credit points.

Language studies

All students wishing to take language studies as a credited part of their degree are required to enrol through the Institute for International Studies, whether the language studies are undertaken in UTS or elsewhere. The Institute offers some language programs at UTS, has made arrangements with other universities for some languages to be taught to UTS students, and can make special arrangements for individual students to attend specific language programs where academic needs demand. The individual student's level of language proficiency before entry to the UTS program decides their level of language study. There is a range of entry levels to the various programs available. Most are available at beginner's and post-HSC levels, and some at more advanced levels.

The Institute offers language programs in Chinese, French, German, Greek, Indonesian, Italian, Japanese, Malaysian, Spanish and Thai. The availability of the Russian major is currently being reviewed. There is also a Heritage major that permits students with previous exposure to a language and culture to continue their study in countries such as Greece, Hong Kong, Korea, Poland, Taiwan and Vietnam. The Institute can arrange for the teaching of other language programs depending on availability and demand.

Contemporary society

The Institute also offers a series of subjects that provide an introduction to the contemporary societies, politics, economics and cultures of the countries of East Asia and South-East Asia, Latin America and Western Europe that are the areas of specialisation of the Institute.

Introductory subjects are offered on the contemporary societies of China, Japan, Latin America, South-East Asia, Hong Kong, Taiwan and Europe. There are no prerequisites for any of the Contemporary Society subjects. All subjects are taught in English and are available, with the permission of their faculties, to all UTS students.

Further information is available in the 2001 handbook of the Institute for International Studies or contact:
Institute for International Studies
University of Technology, Sydney
10 Quay Street, Haymarket
telephone (02) 9514 1574
fax (02) 9514 1578

Insearch

Insearch, which is wholly owned by the University of Technology, Sydney, offers a Foundation Studies Certificate in Design and a Diploma in Design (Visual Media). These programs are designed for students who are not currently qualified for direct university entry. While the University cannot guarantee admission to its degree programs (except for international students), students who have completed the Foundation Studies Certificate program may apply for admission to the first year of the Bachelor of Industrial Design, Bachelor of Interior Design or Bachelor of Fashion & Textiles. If admitted, students who have completed the Diploma program may be granted up to one year's advanced standing in the Bachelor of Visual Communication degree.

For further information contact:
The Registrar
Insearch
Ground Floor

Prizes and scholarships are awarded each year to students in the Faculty for meritorious work. These are made available through the generosity of private individuals and public organisations. Prizes are awarded in respect of each academic year (unless otherwise stated) and are presented annually at a Faculty ceremony, normally in June or July in the following year.

A number of scholarships are also available for postgraduate students in addition to those below and intending applicants should contact the University Graduate School on (02) 9514 1521 for details.

**Design**

**Haworth Australia Award for Innovation in Interior Design**

Haworth Australia Pty Ltd has established this award to reward academic achievement in innovative interior design. The award is open to any full-time Bachelor of Design (Interior Design) student who has successfully completed the 86880 Major Project IT in the course. The award has a cash value of $1,000.

**Woods Bagot Scholarship in Interior Design**

This scholarship was established in 1994 to reward academic achievement in Interior Design and to assist students in gaining professional work experience. It is awarded to a student enrolled in the third year of the Bachelor of Design (Interior Design) course who has demonstrated academic excellence. The scholarship is tenable for two years and has a cash value of $2,000.

**Architecture**

**Alexander and Lloyd Australia Design Prize**

The award was first made available in 1967 by the firm of architects, Alexander and Lloyd Pty Ltd. Since then the donors have continued to support the efforts of the Faculty and to provide incentives to students. It is awarded annually to the student obtaining the highest weighted average mark in Year 2 of the Architecture course. The prize is a cash award of $100.

**Board of Architects Prize**

The Board of Architects awards an annual prize of $500 to the graduating student in Architecture who, in the opinion of the students in the Year 6 class, has contributed most to the work and progress of the class as a whole.

**The Board of Architects Year Prizes**

Awarded to the student in each of the first four years who, in the opinion of the Faculty, shows outstanding achievement in the Architecture course. The prizes are cash awards of $250.

**Brewster Murray Pty Ltd Prize**

The firm of architects Brewster Murray Pty Ltd has encouraged the efforts of students undertaking studies in Architecture since 1967 by offering an award annually to the student attaining the highest weighted average mark in Year 4 of the Architecture course. The prize is a cash award of $500.

**Byera Hadley Testimonial Prize**

This prize, formerly administered by the Department of Technical and Further Education, is financed from a bequest made by the late Mr Byera Hadley, a former Lecturer-in-Charge of Architecture. The award became an official prize of the then Institute in 1977. At the discretion of the Faculty Board in Design, Architecture and Building, the prize is awarded biennially to the student who achieves the best performance in the subject 11961 Architectural Design and Technology 2 of the Architecture course. The award comprises a cash prize of $150 plus a certificate.

**The Carl Nielsen Professional Development Award**

This annual award aims to assist recent graduates in Industrial Design at UTS to visit leading overseas industrial design groups and manufacturing companies noted for their commitment to high standards of product design. It will be granted to the applicant judged as the most capable of taking advantage of the opportunities it may provide to advance his or her future professional standing as an industrial designer in Australia.

Written applications, from graduates of the previous five years, will be accepted up to March 31; application information may be obtained from the Faculty Office or the Faculty’s website. $2000 will subsequently be available for collection from the Faculty on presentation of a final travel schedule and copies of correspondence confirming invitations and arrangements for visits to nominated design groups/companies.

**The Edward Alexander Memorial Prize**

This prize has been established to honour the late Edward Alexander who was a graduate of the East Sydney Architecture School and contributed a great deal to the school’s life and scholarship. It is awarded to the student
enrolled in Year 1 of the Architecture course who attains the highest mark in the subject 11911 Architectural Design 1. The prize consists of a certificate and a high quality architectural publication with a cash value of $250.

**J J Greenland Prize for Excellence in the Field of Energy Conservation in Buildings**

This prize is funded from the proceeds of the sale of *Foundations of Architectural Science*, written by Dr Jack Greenland, a former member of the School of Architecture. The prize is awarded to a student enrolled in the Architecture course who demonstrates excellence in the field of energy efficient design in the technology component of the subjects 11951 Architectural Design and Technology 1 (Year 5) and 11961 Architectural Design and Technology 2 (Year 6). It consists of textbooks to a value of $300.

**The New South Wales Chapter of the Royal Australian Institute of Architects Prizes**

This body awards a prize and, in addition, administers as Trustee, two Memorial Prizes which are awarded to students in Architecture:

1. **A W Anderson Memorial Prize**
   The late A W Anderson was active in forming the RAIA and was twice President of the New South Wales Chapter. This prize is awarded for the highest weighted average mark in the subjects 11933 Theory Studies 3 and 11943 Theory Studies 4. It comprises a certificate and a cash award of $100.

2. **W A Nelson Memorial Prize**
   This prize is awarded for the best dissertation carried out during Years 5 or 6 of the Architecture course. It comprises a certificate and a cash award of $120.

3. **The RAIA NSW Chapter Prize**
   This prize is awarded annually to the graduating student in Architecture with the highest weighted average mark over Years 5 and 6. It comprises a certificate and a cash award, the amount of which is determined each year.

**Tony Van Oene/Concrete Masonry Association of Australia Memorial Prize**

This prize was established in 1992 from a donation received from the Concrete Masonry Association of Australia and the estate of Tony Van Oene, a former student of the School of Architecture. The prize is awarded to a student enrolled in the Architecture course who achieves the highest average mark in the design components of the subjects 11951 Architectural Design and Technology 1 (Year 5) and 11961 Architectural Design and Technology 2 (Year 6). It consists of textbooks related to architecture and urban design to a cash value of $360.

**William Edmund Kemp Memorial Prize**

A fund has been established to perpetuate the memory of Mr William Edmund Kemp and his services as an architect with the Department of Education, in connection with Architecture and Technical Education in New South Wales. Mr Kemp designed the original buildings and workshops of Sydney Technical College at Ultimo and the Museum of Applied Arts and Sciences. The fund provides a medal and a cash prize of $300. The prize is awarded annually to the student who gains the highest weighted average mark in Year 3 of the Architecture course.

**Building studies**

**AMP Land Economists Prize**

This prize was established in 1989. It is awarded to a full-time student enrolled in the degree course in Land Economics who obtains the highest weighted average mark on completion of the subjects in Year 2 of the full-time program. This prize has a cash value of $500.

**Archibald Howie Memorial Prize**

The Late Sir Archibald Howie provided a fund for a prize to encourage and promote interest in studies in the Construction Management course. The prize, in the form of cash, may be awarded by the Trustees to a student who obtains the best results in the full final-year program of the Construction Management degree course, either part time or full time. The prize is valued at $150 and is awarded biennially.

**The Australian Institute of Building, NSW Chapter Medal**

This award was established in 1987. It is presented to the graduating student from the Construction Management degree course who achieves the highest weighted average mark. The prize consists of a cash award of $100, a certificate and a suitably inscribed medal.
Australian Institute of Construction Estimators Prize

This prize was established in 1984 by the Australian Institute of Construction Estimators. The prize is awarded to the Construction Economics student who achieves the highest weighted average mark in the subjects in the second half of the undergraduate course. The prize has a cash value of $250.

The Australian Institute of Quantity Surveyors (NSW Chapter) Prize

The New South Wales Chapter of the Australian Institute of Quantity Surveyors offers a prize each year for the student who obtains the highest weighted average mark (WAM) for the Construction Economics course upon graduation. The award comprises a sum of $250 plus one year’s associate membership of the AIQS, including the entrance fee, where the recipient is eligible.

The Australian Institute of Quantity Surveyors (NSW Chapter) Environmental Contribution Award

The AIQS (NSW Chapter) has established a new, annual prize to be presented to a student enrolled in the Master of Building in Construction Economics course, who achieves the highest mark in the subject 17560 Research Project. The award comprises a cash prize of $500 and a Certificate of Achievement.

Australian Property Industry Gold Medal

This prize was established in 1991 by the Australian Institute of Valuers and Land Economists. It is awarded to a student enrolled in the Land Economics degree course who completes the degree with the best aggregate mark in Valuation subjects. The prize takes the form of a certificate, a gold medal and a cash award of $100.

Australian Property Industry Year Prizes

These prizes were established in 1991 by the Australian Institute of Valuers and Land Economists. The prizes are awarded to six students enrolled in the Land Economics degree course who have performed best in the six years of the course as described by the part-time program. The six prizes each have a cash value of $200.

FM Link Australia International Facility Management Award

This prize was introduced in 2000. It is to be awarded annually to the student who receives the highest cumulative result in the individual essays submitted for the subject 17550 Environmental Economics. A subject mark of at least a Credit is required before consideration. The prize is a cash award of $1,000 and a Certificate of Achievement.

Francis E Feledy Memorial Prize

This award was established by the staff of the British Motor Corporation as a memorial to the late Francis E Feledy for his work as an architect and engineer with that company. The award was first made available in 1966 through the then Department of Technical Education. In 1974, the then Institute became the Trustee of the fund. At the discretion of the Trustee, the prize is awarded annually to an outstanding part-time student entering his/her final year in each of the Faculties of Engineering; Science; and Design, Architecture and Building. Each prize is valued at $600.

Grosvenor International Prize in Project Management

This prize will be awarded to the student in the second year cohort who, in the opinion of the students in second year of the Project Management Program, has contributed most to the progress of the cohort as a whole. The prize has a cash value of $500 and a Certificate of Achievement.

Grosvenor International Prize in Urban Estate Management

This prize will be awarded to the student in the second year cohort who, in the opinion of the students in second year of the Urban Estate Management Program, has contributed most to the progress of the cohort as a whole. The prize has a cash value of $500 and a Certificate of Achievement.

Hugh B Gage Award

The late Hugh Gage, Quantity Surveyor of Parramatta, established this award for students in Construction Economics to encourage initiative and to promote further study. The award has been presented annually since 1972 to the best Construction Economics student completing the subjects in Year 2 of the part-time undergraduate course. The prize has a cash value of $125.

Land Economists Prize

The Australian Institute of Valuers and Land Economists offer this prize, established in 1991, to a student enrolled in a standard-year program (either part-time or full-time) of the Land Economics degree course who achieves
the highest weighted average mark for the year out of all students enrolled in the course. The prize takes the form of a certificate and a cash prize of $200.

**Property Council of Australia Scholarship**
This scholarship was established in 1991 by the Building Owners and Managers Association. It is awarded to a student in the Land Economics degree course who has demonstrated exceptional achievement during the first half of the course and is recognised as having potential for making a contribution to the Australian property industry. The scholarship comprises a certificate and cash award of $2,000, paid in two instalments.

**Real Estate Institute of New South Wales Prize**
This prize was established in 1989. It is awarded to the best graduating student from the Land Economics degree course (based on the graduating weighted average mark). The prize has a cash value of $1,000.

**The RICS Construction Economics Prize**
Awarded to the student who obtains the highest weighted average mark in their first year of the Construction Economics course. The prize has a cash value of $250.

**The RICS Land Economics Prize**
Awarded to the student who obtains the highest weighted average mark in their first year of the Land Economics course. The prize has a cash value of $250.

**Rider Hunt High Achievement Award**
Rider Hunt of Sydney offers an annual award for the Construction Economics student who has the highest weighted average mark in the undergraduate course, subject to that student having a satisfactory performance in the year for which the award is given. The weighted average mark is calculated in the same manner as that used in the consideration of honours. The award has a cash value of $500.

**Tracey Brunstrom and Hammond Group Prize in Construction Management**
This prize will be awarded to a registered student in the postgraduate course in Project Management who attains the highest mark in the subject 16020: Construction Project 2. The prize has a cash value of $1500 and a Certificate of Achievement.

**Tracey Brunstrom and Hammond Group Prize in Project Management**
This prize will be awarded to a registered student in the postgraduate course in Project Management who attains the highest mark in the subject 17601 Graduate Project. The prize has a cash value of $1500 and a Certificate of Achievement.

DESIGN

Bachelor of Design
A revised structure and curriculum for the Bachelor of Design was introduced in 1999. In 2001, all students will continue with or transfer to the new programs.
All new students will undertake what is substantially a common first semester (Level 100) as well as a specific core subject which introduces them to their major area of design: Visual Communication, Fashion and Textile Design, Interior Design or Industrial Design. The rationale behind this approach is based upon:
• the sharing of a common design process
• common knowledge and skills
• a common social context within which designers operate, and
• the desirability for designers in each area to establish personal and professional links with those in adjacent areas.
The course is delivered by way of studios, lectures and workshops.
The second- and third-year curricula consists of professionally focused coursework. The final year is based upon personal research and professionally oriented project work with the final semester being a major project of the student’s own choosing.
The course also features a number of elective studies to be taken either within the Faculty or elsewhere. The choice of electives or a sub-major is at the student’s discretion but is subject to availability and approval.
All students are required to gain practical experience in professional design practice to augment and complement their academic studies. Advice and approval should be sought from the appropriate members of staff.

Regulations
These regulations are to be read in conjunction with the University’s Rules and By-law, as contained in the UTS Calendar and online at: www.uts.edu.au/div/publications/policies/index.html
These regulations relate to the majors in the Bachelor of Design course: Fashion and Textile Design; Industrial Design; Interior Design; and Visual Communication.

Awards and graduation
Old course
A student is deemed to have completed the educational requirements for the Bachelor of Design course when he or she has achieved at least 192 credit points made up of the following:
152 credit points from required Major Studies subjects including:
• 24 credit points for Design 1 at 100 level
• 104 credit points at each of 200, 400, 500, 600 and 700 levels
• 24 credit points from major project at 800 level
• 24 credit points of elective subjects – 6 credit points at each of 300, 400, 500 and 600 levels
• 12 credit points of design theory subjects.
New course
A student is deemed to have completed the educational requirements for the Bachelor of Design course when he or she has achieved at least 192 credit points made up of the following:
• 132 credit points from core program subjects
• 24 credit points of elective study
• 36 credit points of cross-disciplinary design subjects, including level 100 and Design Theory subjects.

Progression
A student must pass all prerequisites at one level of study before being eligible to proceed to the next level. This requirement may be varied with the approval of the Director of Program.

Design Theory
The Design Theory strand is an important element in the Bachelor of Design programs with the necessary attainment of 12 credit points being the minimum. These subjects may be offered in a variety of modes and students may undertake them at any time during their course although this will depend on availability.
Elective stream

Students are required to undertake 24 credit points of electives. This may be in the form of a sub-majors – 24 credit points in a single specialist area, or may be freely chosen by students from a variety of electives offered by the University.

Assessment policy

This policy statement has been adopted in accordance with the University’s policy on assessment. Successful implementation of this policy requires understanding, commitment and active participation in assessment processes by both students and staff. It is important that staff and students are familiar with the policy and that they work to ensure that assessment processes are conducted as consistently and fairly as possible.

The assessment period for the Bachelor of Design is one semester.

A semester program for each subject is provided to students by the third week of the semester. This program provides, in more detail than the subject description, an outline of the content, staffing, teaching/learning strategies, pattern of assignments, assignment weighting and basis of assessment planned for the semester. The basis for assessment is spelt out in the semester program for each subject. Attendance and participation in classes may be a prerequisite to a passing assessment in all subjects. Achievement of a subject’s aims becomes difficult if many lectures, seminars, tutorials or studio/workshop sessions are missed.

The assignment conditions set by the subject lecturer define as necessary the submission format, the submission deadline and the assessment criteria. The submission deadline is the date and time at which the assignment is due. Assignments are required to be delivered to the subject lecturer, or to the person nominated by the subject lecturer to accept submissions, before the deadline.

Late submissions will not be accepted. The only exceptions to this policy can occur where prior arrangements have been made with the subject lecturer. Students are strongly advised, in their own interest, to make an incomplete submission on time rather than to seek acceptance of a late submission.

Incomplete assignment submissions will be accepted before the deadline and will be assessed, and any students who believe themselves to have been prevented by disability or misadventure from completing an assignment may attach to their submitted work a written explanation of the circumstances preventing completion.

Subject assessments are compiled by coordinating examiners, in consultation with staff teaching in the subject and with the Director of Program. In the compilation of subject assessments, assignment marks are weighted to reflect the duration, importance and effectiveness, as a measure of competencies, of the various assignments. Each grade proposed is based upon a percentage score.

A conceded pass or R result can be awarded to a student by the Examination Review Committee. This is given to a student whose mark is just below the pass/fail boundary. In any one semester a student may be awarded one conceded pass only, and in order to be granted that, must have achieved passing grades in all other subjects attempted and a Weighted Average Mark (WAM) of 55 or greater in that assessment period.

The Examination Review Committee meets to consider consolidated results. Medical and other properly submitted evidence about factors affecting a student’s performance plus records of absences and approved leave are considered. When approved and adopted by the Examination Review Committee, results become official and are released to students by the University’s Student Administration Unit.
Bachelor of Design in Fashion and Textile Design

- Course code: DF01
- UAC code: 601040
- Testamur title: Bachelor of Design
- Abbreviation: BDesign
- Course fee: HECS (local) $6,500 per semester (international)

Fashion and textile design is concerned with the design of fashion clothing, surface and textiles, their related fields and technologies. The course deals with the changing needs and values of society and how this reflects on the direct and allied industries. The context of the course covers aspects from street to high-end fashion, and fashion to interior textiles.

Fashion and textile designers work with or alongside manufacturers and marketers; they have responsibility for design direction and marketability of produced concepts. They need to have an awareness of current and projected trends and values in lifestyle, and a detailed understanding of materials, technologies and process methodologies of the fashion and textile industry. The structure of the course is planned to produce graduates who aspire to the highest level of practice and who, as individuals, are capable of adapting to the diversified and changing nature of the industry while developing a personal philosophy and style.

In the first year, the curriculum supports problem-based and self-directed learning. In the Autumn semester students are involved in multidisciplinary study, including design communications, research methods and contextual studies. The common program is complemented by fashion and textiles fundamentals. Major studies for fashion and textile design commence in the Spring semester and focus on technology and communication in both disciplines. Design theory supports core study areas.

Second-year subjects comprise three complementary streams: fashion, textile, research and communications. Through the study of theory and practice in these fields, students develop their understanding of the design process, its adaptation and application to society. Third-year subjects, while continuing these streams, encourage specialist development of individual design practice, together with a professional experience program and academic research. Fashion design involves the study of the varied levels and market areas of this design field, while textile design encompasses the spectrum of surface design, with all its nuances.

Bachelor of Design in Industrial Design

- Course code: DD01
- UAC code: 601050
- Testamur title: Bachelor of Design
- Abbreviation: BDesign
- Course fee: HECS (local) $6,500 per semester (international)

Industrial designers are concerned with the design of products to be produced by manufacturers. Employed by design consultants and industry, industrial designers are responsible for the visual and tactile qualities of products, their efficiency and cost effectiveness, and the wider implications the product may have to the society and the environment. This course is planned to produce graduates who can adapt successfully to industrial and social change and be capable of taking leadership roles in industry.

The program is designed to reflect the many changes occurring in industrial design. The increasing reliance on information systems and the development of powerful computing tools are changing the way designers work and how they relate to their clients and the users of products. The program expresses these developments through an emphasis on collaborative work, information handling and use of electronic technologies. The process of design is studied within a systems context. Understanding the place of design in the context of the socio-cultural, economical, and environmental systems provides the foundation for the design of products which are sustainable over the long term.

Course structure

The curriculum is based on a problem-solving approach and self-directed learning. Students take a largely common first semester of multidisciplinary study.

Lectures, seminars and tutorials support students engaged in projects and in workshops which are run concurrently with the projects. The workshops focus on subjects ranging from manufacturing and ergonomics to marketing and engineering science. A strand of design theory subjects runs throughout much of the course as does elective study which provides an opportunity to develop expertise in another area of design such as transport or film and video.

Bachelor of Design in Interior Design

- Course code: DT01
- UAC code: 601060
- Testamur title: Bachelor of Design
- Abbreviation: BDesign
- Course fee: HECS (local) $6,500 per semester (international)

Interior design is concerned with the design of all aspects of the interior built environment. Interior design is carried out as a response to needs expressed according to the uses of the built environment. Interior designers work with building construction, building materials and building product supply industries according to their individual theoretical position or that of an employer, to create designs for interior built environments. Interior designers work with other building design consultants such as engineers and architects. Interior designers need to have a thorough understanding of all phases of cultural aspects of designed space, from the objective to the subjective, from the individual to the collective, the material to the non-material and be able to work within the media that represent those aspects of cultural space, in their design work.

Curriculum

The interior design program allows for a broad view of the role of the interior designer. To implement this the course allows for specialised and flexible learning paths in which experimentation, exploration and investigation are offered. The first year of study consists of interior design specific subjects and common design subjects. Interior design specific subjects are undertaken by interior design students only. Common design subjects are undertaken by all students of the four design disciplines and involve projects that foster interdisciplinarity in design activities. In Years 2 and 3, the interior design student may choose a specialised sequence of studios from a range of elective core subjects. An interdisciplinary project in fourth year offers a collaborative subject in the final year of study. The first semester of final year consists of a single design project and a dissertation. In the single ‘Industry’ project, students investigate the practice of interior design in the course of completing the studio design work. In the dissertation, students carry out research and analysis of a selected design topic. In the final semester of study, each student completes an individual semester-long design project in which they demonstrate their particular interior design stance.

Students will be required to elect core subjects for the following year. This will be done during the Spring semester of the preceding year. The program reserves the range of subjects to be offered until the election process takes place. Students may only enrol in subjects that are being offered. The numbers for each subject are limited. The allocation of students to subjects will be subject to an equitable distribution process.

Core subjects from other programs may be elected but are subject to the approval of the program director of both Interior Design and the program from which the subject is chosen.

Interior Design core subjects

Seventy-two credit points are required in the Interior Design core by the end of Year 3. Students must take a minimum of four subjects from the Interior Industry subject stream. The remaining subjects required for Years 2 and 3 can be taken from the other two Interior subject streams with a minimum of three subjects from each of these streams. Interior Design core subjects will be offered on a student demand basis.

**Level 700**
- 86777 Professional Practice and Industry Project 6cp
- 86780 Research Dissertation IT 6cp
- 85700 Interdisciplinary Project 6cp
- 85470 Criticism and Argument 2cp

**Level 800**
- 86880 Major Project IT 24cp

---

1. These are examples of Design Theory subjects which may be offered. A total of 24 credit points of electives are to be completed during Years 2 and 3.

2. One Design Theory subject is to be taken each semester.
Bachelor of Design in Visual Communication

- Course code: DV01
- UAC code: 601070
- Testamur title: Bachelor of Design
- Abbreviation: BDesign
- Course fee: HECS (local) $7,000 per semester (international)

Visual communication design involves the creation, processing and production of messages in an ever-expanding range of communication contexts. Designers are employed for their expertise and creativity to develop the optimum form and impact of the message. The message may need to instruct, direct, inform, entertain and/or persuade and its form may include text, image and/or sound which may be generated by hand and/or digitally. The medium of the message may be static and/or dynamic.

The Visual Communication course aims to prepare students for this diversity and expects graduates to aspire to the highest level of professional practice and to take an imaginative and constructively critical approach to their work. Two important features of the course are that students are encouraged to develop their own creative abilities and to be aware of the broader cultural, social and political impact of their design work.

Subjects actively encourage conceptual skills and design processing in the context of communication, rather than the performance of technical operational skills. This is emphasised throughout the course which is structured to allow students to select areas of interest particularly in the second half of the course.

¹ These are examples of Design Theory subjects which may be offered.

Elective subjects

The following one semester subjects are available for non-Visual Communication students; selection criteria apply. Please seek academic advice.

- 87335 Design Projects VC 3 (S)    | 6cp      |
- 87445 Design Projects VC 4 (S)    | 6cp      |
- 87555 Design Projects VC 5 (S)    | 6cp      |
- 87665 Design Projects VC 6 (S)    | 6cp      |
These are examples of Design Theory subjects which may be offered.
ARCHITECTURE

Overview of courses
The Architecture program at UTS offers intellectual and professional education through two distinctive but consecutive and strongly interconnected degree courses. The first tier of this two-tier structure comprises a Bachelor of Arts in Architecture, awarded after successful completion of the first four years of the program, while the second tier comprises either a Bachelor of Architecture or a Master of Architecture degree after a further two years of study.

The Bachelor of Architecture is a professional degree i.e. a qualification accepted for candidates seeking to take the professional examination of the Board of Architects and Royal Australian Institute of Architects (RAIA) as a prerequisite to registration under the provision of the Architects Act. The Bachelor of Architecture may be undertaken only after the successful completion of the Bachelor of Arts in Architecture degree (or equivalent), a degree which by itself does not lead to professional recognition.

Please note that for administrative purposes all potential students, irrespective of the likelihood of entry with advanced standing must apply for entry to the Bachelor of Arts in Architecture program; neither the Bachelor of Architecture nor the Master of Architecture may be undertaken as a 'stand alone' degree.

All students entering Years 1–5 of the course will enrol in either the Bachelor of Arts in Architecture program (Years 1–4 inclusive) or the Bachelor of Architecture/Master of Architecture program (Year 5), details of which are provided below.

Under the current course structure students may be eligible to undertake a range of degree options, and may choose to undertake such degrees in a variety of year patterns. The chart below outlines likely patterns.

### Course aims – cooperative education

A fundamental aim of the Architecture courses offered in the Faculty is to provide opportunities for students to combine study with practice, which is realised through the use of a combination of full-time and cooperative education programs.

The essence of cooperative education is the joint provision of architectural education by both the academy and the architectural profession. In this way a balance is maintained between intellectual study and practical training, between the study of architecture as a scholarly discipline in the University and the provision and development of professional skills in the workplace. Students thus engage contemporaneously in academic pursuits and practice through carefully monitored programs.

Delivery of architectural education in the cooperative mode places serious pedagogical obligations on both providers and students. On the part of the University, the obligation is to provide intellectual training by offering informed and challenging programs that treat in detail the study of architecture as a scholarly discipline. On the part of the profession, in cooperation with the University in the provision of architectural education, the obligation is to provide the practical training and experience that leads to the development of the skills necessary for the pragmatic practice of architecture as a professional and vocational discipline. On the part of the student the obligation is to assimilate the two, to weld the intellectual with the practical, the academic with the vocational, the University with the profession.

This parallel development in intellect and practice makes for balanced and well-informed students who can contribute at all stages of their education to their vocational discipline. The structure of the program also allows for maximum flexibility of study choices and career specialisation.

**Option** | **Award** | **cp** | **Year 1** | **Year 2** | **Year 3** | **Year 4** | **Year 5** | **Year 6** | **Year 7**

Legend:  
F/T: Full-time attendance  
co: Cooperative attendance  
(xx): Credit points
In general the cooperative education model means that students attend the University for one full day (9.00 a.m. - 9.00 p.m.) plus one additional evening (5.00 p.m. - 9.00 p.m.) per week during semester, while at the same time gaining practical experience by working, and thus being trained in an architect's office for at least a further three days per week.

Approved architectural experience is a precon­dition for the award of each of the degrees. Generally it takes approximately two years for a student to accumulate sufficient practice credit points to qualify for the award of the Bachelor of Arts in Architecture degree, and four years to qualify for the awards of Bachelor of Architecture or the Master of Architecture degrees.

At the completion of the academic program, and with the signed approval of the Director of Professional Practice, a student may submit a completed log book to the Board of Architects for confirmation of eligibility to submit for the Board of Architects Examination with a view to qualifying for vocational registration.

All information regarding registration with the Board of Architects and membership of the NSW Chapter of the Royal Institute of Australian Architects may be obtained from:

Portfolio reviews and viva voce examinations

Portfolio reviews
At Years 1, 2 and 3 of the BA in Architecture and BA (Hons) in Architecture degree programs the subjects 11911/11921/11931 (Architectural Design 1, 2 and 3); and 11912/11922/11932 (Technology 1, 2 and 3) are monitored by a Portfolio Review Panel which inspects the year’s work of each student, monitors the marks awarded and arrives at a final grading by consensus. At Year 5 level of the new Bachelor of Architecture/ Master of Architecture degree program the single subject 11951 (Architectural Design and Technology 1) is similarly reviewed.

The Portfolio Review Panel will consist of some or all of the following:
- Professor of Architecture
- Subject-strand Director: Architectural Design
- Tuition Staff: Architectural Design
- Subject Coordinator: Design
- three student representatives from the Year level being examined.
- all staff contributing to the specific subject(s) and/or component(s) in the Year level being examined.

This approach ensures that consistent standards can be applied and provides stringent safeguards.

Viva voce examinations
At Year 4 level of the BA and BA (Hons) degree programs, and at Year 6 level of the new Bachelor of Architecture/Master of Architecture programs, the subjects 11941 (Architectural Design 4) and 11961 (Architectural Design and Technology 2) respectively will be examined by way of a viva voce review.

The Viva Voce Review Panel is similar to the Portfolio Review Panel with the addition of an external academic and a professional representative.
Bachelor of Arts in Architecture

- Course code: AAOJ
- UAC code: 601000
- Testamur title: Bachelor of Arts in Architecture
- Abbreviation: BA
- Course fee: HECS (local)

The Bachelor of Arts in Architecture degree provides the first of a two-tier professional education course offered within the Faculty, the second tier comprises the Bachelor of Architecture/Master of Architecture programs which are outlined below.

The Bachelor of Arts in Architecture is a four-year program which may be undertaken as either a Pass degree or as an Honours degree.

Pass degree

The Pass degree of Bachelor of Arts in Architecture is of four years' duration and comprises 144 credit points.

Year 1 is undertaken via full-time study, comprises 48 credit points and involves the equivalent of approximately 21 contact hours per week over two semesters. Years 2, 3 and 4 are undertaken as part of a cooperative education program, with each year comprising 32 credit points and involving the equivalent of 13 contact hours per week over two semesters.

While all subjects are compulsory in the Bachelor of Arts in Architecture program, a wide range of content choices, and opportunities for specialisation, are available to students via the Elective Studies subjects.

Any student entering the architecture course at Year 4 level i.e. entering with advanced standing, will not be eligible for award of the Bachelor of Arts in Architecture degree, (either Pass or Honours degree), after the successful completion of Year 4 of the BA program. For such students Year 4 will be considered as a qualifying year for entry to Years 5 and 6 of the course. Students must have been enrolled for, and have successfully completed, a minimum of two full years of the program to be eligible for receipt of the degree.

Eligibility for the Honours program

Any student who has passed all subjects at Years 1 and 2 level and recorded no failures at Years 1 or 2 level, may elect to undertake the Honours Qualifying program in Year 3. The decision to undertake the Honours Qualifying program will be made at the beginning of Semester 2 of Year 3, with students undertaking additional work towards the Honours degree in that semester.

To qualify for entry into the Honours program in Year 4, students undertaking the Honours Qualifying program in Year 3 must:

1. pass all subjects undertaken at Year 3 level, including any elective subjects undertaken outside the program
2. obtain a weighted average mark at Credit level or above calculated on the basis of all subjects undertaken and required for the Pass degree at Year 3 level
3. pass the subject 11936 Honours Qualifying at Credit level or above.

Students who do not meet these requirements will undertake the Pass degree program in Year 4.

1 This course is not offered to international students.
Students who have already successfully completed the Pass degree of the BA in Architecture and who wish to undertake the Honours program will be eligible to do so provided that they:

1. have recorded no failures at either Years 3 or 4 levels
2. have obtained a weighted average mark at Credit level in all Year 3 and Year 4 subjects
3. have not previously attempted and recorded a fail in the Year 3 and/or 4 Honours program, and
4. enrol in the Honours program in the academic year immediately following that in which they have completed the BA Pass degree and thus prior to their receipt of that degree. Such students would be exempt from the Year 3 Honours Qualifying program but would be required to undertake the full Year 4 Honours program. Please note that in such cases only one BA degree will be awarded.

Bachelor of Arts (Honours) in Architecture

- Course code: AA04
- Testamur title: Bachelor of Arts (Honours) in Architecture
- Abbreviation: BA(Hons)
- Course fee: HECS (local)\(^1\)

The Honours degree of the Bachelor of Arts in Architecture is an essential component of the educational profile established within the new course structure, particularly in light of the continuation of the professional course at both Bachelor of Architecture and Master of Architecture level. Entry to the professional Master's program will be through the BA (Honours) in Architecture program. The Honours degree is nominally of four years' duration and comprises 180 credit points. To be awarded the Honours degree of Bachelor of Arts in Architecture a candidate must fulfil all the requirements for the Pass degree plus:

1. undertake and achieve at least a Credit grade in the Year 3 subject 11936 Honours Qualifying
2. undertake and achieve passes in the Year 4 subjects 11945 Honours Elective Thesis and 11946 Design Honours
3. have recorded no failures in any Year 3 or 4 subjects
4. obtain a weighted average mark at Credit level or above calculated on the basis of all subjects undertaken and required for the Pass degree at Year 4 level.

Class of Honours

Provided that the above conditions have been met, the class of Honours to be awarded will be determined as follows, subject to Faculty Board approval:

- First Class Honours – weighted average mark of 75 or above in subjects 11945 Honours Elective Thesis and 11946 Design Honours
- Second Class Honours Division 1 – weighted average mark of \( \geq 70 \) but \(< 75 \) as above
- Second Class Honours Division 2 – weighted average mark of \( \geq 65 \) but \(< 70 \) as above
- Third Class Honours – weighted average mark of \( \geq 50 \) but \(< 65 \) as above.

\(^1\) This course is not offered to international students.
Students who undertake the Honours program in Year 4 but who record failures in any of the Honours components will (having satisfactorily completed all other subjects) be awarded the Pass degree of Bachelor of Arts in Architecture.

Note: Under special conditions the Year 4 subject 11946 Design Honours may be substituted for an equivalent subject. See details under Special conditions for elective in Year 4.

Honours program in Year 4

The Honours program in Year 4 may be undertaken either:

1. concurrently with all other Year 4 subjects as a full-time year (32+30=62 credit points). Students wishing to take this option would begin research for their major Honours thesis immediately after receiving notification of their successful completion of the full Year 3 program (i.e. mid December of the third academic year)

or

2. over two years in a cooperative education mode. Students wishing to take this option would be required to undertake the subjects 11941 Architectural Design 4, 11942 Technology 4, 11943 Theory Studies 4 and 11944 Professional Practice 4 in the first year (32 credit points) followed by the subjects 11946 Design Honours, and 11945 Honours Elective Thesis in the second year (30 credit points).

Yearly progression

1. The BA in Architecture and the BA (Honours) in Architecture programs encourage maximum integration between architectural design subjects and those dealing with technology. Accordingly, students who fail, at any given year level, either the subject Architectural Design or the subject Technology (or both), will not be allowed to enrol in any subject in the next year level until these subjects have been passed. Neither architectural design subjects nor technology subjects can be ‘carried’ into a subsequent year.

Example – a student who had passed 11912 Technology 1 but who had failed 11911 Architectural Design 1 would be prohibited from enrolling in any Year 2 subjects until the subject 11911 Architectural Design 1 had been successfully repeated.

2. Subjects other than the architectural design and technology subjects may, at the discretion of the Program Director, be ‘carried’ into a subsequent year. However, failed subjects can only be carried into the subsequent year provided that the total number of subjects failed does not exceed two. Any student who fails more than two subjects at any year level will not be allowed to proceed to the next level of study.

Example – a student who passed both Architectural Design 1 and Technology 1 but who failed two of the other Year 1 subjects would be allowed to ‘carry’ the two failed subjects into Year 2, thus enrolling in a full Year 2 program plus the two failed Year 1 subjects.

3. Students ‘carrying’ subjects may enrol only in subjects that are in two consecutive years of the course.

Example – as described above, a student may undertake Year 2 subjects while ‘carrying’ up to two Year 1 subjects. However, a student would not be allowed to enrol in any Year 3 subjects until all Year 1 subjects had been successfully completed.
4. In addition to the above, entry to Years 3 and 4 are dependent on each student accruing the specified amount of architectural experience points, gained by virtue of their compulsory work in architectural offices. Students who have not accrued sufficient points and/or have not had them so approved by the Director of Professional Practice will not be eligible for enrolment in Year 3 or 4, regardless of having successfully completed the requisite academic program.

**Elective studies**

In each of Years 1, 2 and 3 of the BA program all students will be able to choose to study areas of specific interest by enrolling in the subjects Elective Studies 1, 2 and 3. At each year level the subject carries a weighting of six credit points, thus allowing students to undertake either two components at three credit points each or one component at six credit points.

Students will be free to choose from a range of available options as follows:

1. components offered within the Architecture program
2. subjects offered in other programs in the Faculty of Design, Architecture and Building, subject to approval by the Program concerned
3. subjects offered in other faculties in the University, subject to approval by the Faculty concerned.

Please note that subjects undertaken outside the Architecture program may not exceed six credit points.

Components offered within the Architecture program may vary from year to year depending on staff availability. Components to be offered within the BA in Architecture program in 2001 are listed below. Students will be advised of any changes/additions at the beginning of the academic year.

In special instances students may be directed to utilise the six credit points available in the Elective Studies strand to 'pick up' a compulsory subject that they might otherwise have missed. For example, given the program's commitment to acknowledging previous educational experiences, students accepted directly into the course at Year 2 or 3 level may be required, as a condition of their enrolment with advanced standing, and in order to address a perceived 'lack' in their previous education, to undertake prescribed subjects or components from an earlier year.

In all such cases, all required subjects will be confirmed with individual students prior to enrolment.

Note that in some elective components maximum class size may be limited according to availability of facilities.

In terms of timetabling, appropriate teaching hours will be allocated in each of the first three years for Elective Studies. Since students may elect to choose subjects from outside the Architecture program, these timetable hours refer only to elective components offered within the program. Additionally, students should note that subjects taken outside the Architecture program must not conflict with the program's timetable for compulsory subjects.

Students entering the Architecture program with previous university experience may request exemptions from the subject Elective Studies at the appropriate year level(s).

**Elective subjects offered within the Architecture program**

**Subject to staff availability** the following elective components will be offered within the Architecture program in 2001:

**Year 1**

</tbody>
</table>

1 Maximum class size is 25.
2 Maximum class size is 15.
Other selected specialist study areas may be offered from time to time, depending on available expertise. Further details may be found in the Subject Descriptions section in this handbook.

**Elective subjects available in the Faculty in 2001**

Certain subjects from programs in the discipline of Design may be available as suitable elective subjects for students enrolled in the BA in Architecture degree. As a general principle, students enrolled in Years 1-3 of the BA in Architecture might consider those subjects offered in the Design discipline under the heading of Elective Stream. Further details may be found in the relevant section of this handbook.

Additionally, certain subjects from programs in the discipline of Building Studies may be available as suitable elective subjects for students enrolled in the BA in Architecture degree. Further details may be found in the relevant section of this handbook.

**Elective subjects offered by other faculties**

Students may undertake subjects in other faculties of the University, subject to approval by both the specific faculty concerned and by the Coordinator of Electives in the Architecture program.

**Special conditions for elective in Year 4**

While students wishing to undertake the Bachelor of Architecture degree must first successfully complete all subjects in the BA in Architecture degree, and those wishing to undertake the Master of Architecture degree must complete the BA (Honours) in Architecture degree at the required level, certain students may not wish to proceed to the professional degrees, choosing instead to leave after completion of either the Pass or the Honours degree of BA in Architecture. In such cases a student may, with the permission of the Program Director of Architecture, elect not to enrol in, but rather to undertake a special Year 4 Elective Studies program. This would be in an area of the student's special interest, such a course of action allowing for greater flexibility and offering the potential for the development of alternative career specialisations at an early stage. Please note, however, that students wishing to exercise this option may delete no more than 12 credit points from the Year 4 compulsory program.

In the immediate future, and for reasons of the availability of resources, only a limited range of alternatives will be offered within the Architecture program and, depending on the student's intended speciality or future study plans, he or she will be encouraged to look to other areas of the Faculty/University.

Students completing the final year of their degree, may apply to undertake, as part of their fourth year of study, certain components offered within the Bachelor of Architecture course. To do this they would need to take components from Years 5 and 6 to replace the 10 credit points of 11941 Architectural Design 4.
Bachelor of Architecture

- **Course code**: AA05
- **Testamur title**: Bachelor of Architecture
- **Abbreviation**: BArch
- **Course fee**: HECS (local)

Following the successful completion of four years of architectural education at UTS or its judged equivalent at another institution as determined by the Program Admissions Panel, the Faculty will offer a further degree program – the Bachelor of Architecture.

The Bachelor of Architecture is the second tier of a professional degree structure i.e. a qualification accepted for candidates seeking to take the professional examination of the Board of Architects and Royal Australian Institute of Architects as a prerequisite to registration under the provision of the Architects Act administered by the Board of Architects of NSW; and to professional membership of the Institute. The degree program is of two years’ duration and may be undertaken only after the successful completion of the Bachelor of Arts in Architecture degree (either Pass, Honours degree or qualification judged equivalent). The Bachelor of Architecture degree is undertaken as part of a cooperative education program over two years – referred to here as Years 5 and 6 - each comprising 32 academic credit points, and involving the equivalent of 13 contact hours per week in each year over two semesters.

Total minimum academic credit-point requirement before the professional Bachelor of Architecture degree may be awarded is 208: 144 obtained from the Pass degree of BA in Architecture, plus 64 from the Bachelor of Architecture. Students entering with a BA (Honours) degree in Architecture (180cp) must nevertheless complete all 64 credit points of the Bachelor of Architecture program.

All subjects in the Bachelor of Architecture degree are compulsory.

On the basis of the weighted average mark achieved across all subjects the Bachelor of Architecture degree will be awarded with Honours.

**Eligibility for entry**

The Bachelor of Architecture program may be undertaken only after the successful completion of either the Pass or Honours degree of Bachelor of Arts in Architecture, or the equivalent from another institution as judged by the Program Admissions Panel.

All students who have successfully completed the four-year BA in Architecture or BA (Honours) in Architecture degree at UTS will automatically be accepted into the Bachelor of Architecture program as continuing students provided that they enrol in the Bachelor of Architecture in the next academic year after award of the degree, or seek leave of absence for no longer than one academic year after the award and have the required amount of architectural experience for entry into Year 5.

**Note:** Entry to each of Years 3, 4, 5 and 6 of the course is based on each student accruing a specified minimum number of architectural practice credit points based on their office experience. While this specified minimum may, under special circumstances, be relaxed at Years 3 and 4 levels, entry to Years 5 and 6, and the awarding of the Bachelor of Architecture degree, is strictly conditional upon students accruing in each case the specified minimum number of points prior to enrolment/graduation. Details of practice credit-point requirements may be obtained from the Director of Professional Practice.

Students applying with suitable qualifications from other institutions, or UTS BA in Architecture graduates who have not proceeded directly to the Bachelor of Architecture course, would be ‘external’ students and would apply through the NSW and ACT Universities Admissions Centre (UAC) in the normal way. ‘External’ applicants would constitute new students and entry places would be limited, depending on quotas (available EFTSU).

**Awarding of Bachelor of Architecture degree with Honours**

The Bachelor of Architecture will be awarded with Honours, with the class of Honours being based on the weighted average mark calculated on the basis of all subjects attempted in
Years 5 and 6 as follows, subject to Faculty Board approval:
First Class Honours 75 or above
Second Class Honours ≥65 but ≤75.

There will be no award of Third Class Honours in the Bachelor of Architecture program. Students who do not meet the above criteria but who pass all subjects in Years 5 and 6 will be awarded the Pass degree of Bachelor of Architecture. In addition, students who at any stage record a fail grade in any subject(s) in Years 5 and/or 6 will be awarded the Pass degree once all subjects have been successfully completed.

Yearly progression

Students who fail the subject 11951 Architectural Design and Technology 1 (Year 5) may not enrol in any Year 6 subject until the former subject is successfully repeated.

Any Year 5 subject other than 11951 Architectural Design and Technology 1 may, at the discretion of the Program Director, be ‘carried’ into the subsequent year. However, any student who fails more than one subject in Year 5 will not be allowed to enrol in any of the subjects in Year 6 until the subjects have been successfully completed.

In addition, and as outlined above, entry to Years 5 and 6 will be strictly conditional upon each student having accrued the requisite number of architectural experience points for that year level.

Master of Architecture (parallel program)

- Course code: AA55
- Testamur title: Master of Architecture
- Abbreviation: MArch
- Course fee: tba (local)¹

Following the successful completion of four years of architectural education at UTS (or its judged equivalent at another institution as determined by the Program Admissions Panel) culminating in the award of a BA (Honours) degree in Architecture with First Class Honours or with Second Class Honours Division 1 (equivalent to 180 credit points) the Faculty will offer a further degree program – the Master of Architecture – as an alternative to the Bachelor of Architecture.

The Master of Architecture degree is not a ‘stand alone’ degree; it can not be undertaken as a postgraduate course following the award of a Bachelor of Architecture degree. It is specifically structured so that it may, for those students undertaking it, replace the Bachelor of Architecture degree. It will not be awarded in addition to the BArch, as described below.

The Master of Architecture degree is the second tier of a professional degree structure of two years full-time duration (referred to here as Years 5 and 6) or three years cooperative education comprising a further 96 credit points in total.

The Master’s program comprises all the requirements for the Bachelor of Architecture degree (180cp from BA + additional 64cp) plus an additional subject. This subject, the Master’s Research Elective, comprises a further 32 credit points and may be taken either:

1. concurrently with all other Years 5 and 6 subjects as two full-time years

   \[(32 + 16 = 48cp \text{ per year } \times 2 \text{ years } = 96cp)\]

   or

2. following completion of the ‘normal’ Years 5 and 6 subjects

   \[(32cp \text{ per year } \times 2 \text{ years } = 64cp),\]
   as one additional year (Year 7) involving a further 32cp (64 + 32 = 96cp).

Total academic credit-point requirement before the Master of Architecture degree may be awarded is 276 (180 obtained from the Honours degree of BA in Architecture + 96).

¹ This course is not offered to international students.
All subjects in the Master of Architecture degree are compulsory, with considerable flexibility of subject content being offered in the Master’s Research Elective components. Current students completing all requirements for a UTS Bachelor of Architecture degree in 2001 at the requisite level (see point (c) below) may undertake the Master’s Year 7 program in 2001.

### Eligibility for entry

Entry to the Master of Architecture program proceeds by three possible routes. Conditions of entry and course requirements for each are listed below.

**Candidates entering with a UTS Honours degree of BA in Architecture**

Candidates seeking to enter the Master of Architecture program from Year 4 of the first degree program would be required to hold a Bachelor of Arts in Architecture with First Class or Second Class, Division 1 Honours and have completed all compulsory subjects.

**Candidates entering with an equivalent first degree in Architecture from another institution**

All candidates seeking to enter the Master of Architecture program with a first degree in Architecture from another institution would be subject to a portfolio interview conducted by the Program Admissions Panel. Such candidates must:

1. be able to demonstrate that they hold the equivalent of a First Class or Second Class, Division 1, Honours degree of BA in Architecture from UTS
2. satisfy the interviewing panel that their architectural design work is of a standard comparable to that of the Credit level achieved by Year 4 students at UTS, and
3. have previously successfully undertaken a major piece of academic writing equivalent to the Honours Elective thesis as described above.

Students who do not satisfy the above requirements would normally be expected to undertake all or part of the Year 4 BA (Honours) in Architecture program before being eligible to enrol in the Master of Architecture degree. In some cases it may be necessary, in order to address perceived deficiencies or structural differences in previous educational programs, for such candidates to undertake all or part of the Year 3 BA in Architecture program, as well as that of Year 4.

Candidates from other institutions who meet the above entry requirements would be eligible for enrolment and would undertake the program as outlined above. Note, however, such 'external' applicants would constitute new students and entry places would be limited, depending on quotas (available EFTSU).

**Candidates completing all requirements for a UTS Bachelor of Architecture degree**

Candidates who have completed all requirements for the UTS Bachelor of Arts degree may, provided they have not yet been awarded the BArch degree, be eligible as candidates for the Master of Architecture degree provided that:

1. they have not recorded failures in any subject required for the BArch degree
2. have achieved a weighted average mark of 70 or above calculated on the basis of all subjects undertaken in Years 5 and 6
3. have not already attempted the Honours component of the BA and achieved a result less than 65. Please note that such candidates will be required to complete in one additional year of study the subject Master’s Research elective; and that the Master’s degree will not be awarded in addition to the Bachelor of Architecture.

### Awarding of Master of Architecture degree

To be awarded the Master of Architecture degree, students must (a) pass all required subjects in Years 5 and 6 at credit level or above, and (b) must have recorded no failures in any subjects in Years 5 and 6. Students enrolled in the Master’s program in Year 5 who fail any subjects will revert in Year 6 to the Bachelor’s program. Students enrolled in the Master’s program in Year 6 who fail any subjects will be awarded the Bachelor of Architecture degree once all requisite subjects are passed.
BUILDING STUDIES

Three undergraduate courses of cooperative education are offered:

- Bachelor of Building in Construction Management
- Bachelor of Land Economics
- Bachelor of Building in Construction Economics.

Regulations

These regulations shall be read in conjunction with the University’s Rules and By-law, as contained in the UTS Calendar.

Progression

- On the recommendation of the Examination Review Committee, the Faculty Board may, in exceptional circumstances, exempt a student from the regulations relating to progression.
- The year in these regulations is defined as the program for a year shown in the current edition of the Faculty handbook.
- A student may not enrol in subjects spanning more than two consecutive years of the course.
- A student may undertake subjects totalling not more than 8 credit points from the previous year while doing a full program from the next year.
- A full-time student who is required to repeat subjects totalling more than 8 credit points may enrol in subjects from the next year which would bring the student’s total program to not more than 48 credit points.
- A part-time student who is required to repeat subjects totalling more than 8 credit points may enrol in subjects of the next year which would bring the student’s total program to not more than 32 credit points.
- In exceptional circumstances, course programs at variance with the above rules may be approved by the Associate Dean.

Guidelines for the awarding of Honours

The award of Honours in undergraduate degree courses may be recommended by the Faculty Board for meritorious performance. Any such award is entirely within the discretion of the Faculty Board and numeric calculation of level of performance is only one of the matters taken into consideration.

Examinations and assessment

Final grading for progression is determined by combining the total marks for class work and for final examinations, if any. Class assignments and quizzes are therefore of great importance.

Final examinations will be held at the end of the year, but some examinations may also be held at the end of the Autumn semester.

Arrangements for informal examinations, conducted in class, will be announced by the lecturer in each case. It is each student’s responsibility to be present.

Conduct of the Examination Review Committee

The Faculty Board has determined that the following procedures govern the operation of Examination Review Committees for each course.

1. The Examination Review Committee is a subcommittee of the Faculty Board with delegated power to make decisions on behalf of the Board.
2. The Examination Review Committee may modify the assessment of any examiner, subject to the clauses below.
3. A conceded pass in a subject may be awarded if the following are satisfied:
   (a) the subject mark is in the range 45 per cent to 49 per cent
   (b) the student’s weighted average mark for the assessment period is 55 per cent or greater
   (c) only one failure is recorded for that assessment period.
4. Extenuating personal circumstances should not be taken into account in the examiners’ assessments, but any such circumstances and recommendations may be brought to the attention of the Examination Review Committee.
5. Results should not be withheld unless the issue is expected to be determined within a week (e.g. by the submission of further or revised work) of the commencement of the following semester. Otherwise a failure should be recorded.
6. The Dean or Associate Dean may amend the decisions of the Examination Review Committee in the case of obvious clerical or arithmetic errors.
7. Except as to (6), no alterations may be made to the subject assessments of the Examination Review Committee other than by the use of an official review procedure.

8. The Associate Dean may amend the progression of a student as determined by the Examination Review Committee in the light of subject reassessments.

9. All alterations made under (6) are to be reported to the Faculty Board.

University Medal

A student who displays exceptional merit in any of the undergraduate degree courses may be recommended for the award of the University Medal in addition to graduating with First Class Honours. Any such recommendation will be submitted to the appropriate University committee for approval.

Checking of enrolment details

It is the student’s responsibility to check that her or his enrolment is correctly shown on the listings which will be exhibited on the noticeboards during the first few weeks of each semester, and to notify the Faculty Office of any errors.

Attendance

It is the student’s responsibility to attend lectures and carry out all assignment and examination work in every subject in which he or she is enrolled.

On rare occasions, students repeating a subject may make special arrangements with the Coordinating Examiner regarding exemption from attendance at lectures for part of a course and/or credit for work previously completed. Any such arrangement must be documented, and it is the student’s responsibility to obtain, in writing, clear evidence of the details of the arrangement from the Coordinating Examiner.

Assignments

Assignments are to be handed in on or before the date and time specified in the program. Late assignments will not be accepted unless accompanied by a medical certificate or the like. It is each student’s responsibility to make sure that the receipt of his or her assignment is noted by the lecturer.

Lecturers may, at their discretion, accept late assignments (and exact appropriate penalties), if students make arrangements in advance.

Withdrawal from subjects

Students are referred to the relevant University Rule regarding withdrawal from subject(s) and their program of study.

The Associate Dean may grant approval for students to withdraw without academic penalty beyond the prescribed date.

Students having problems with the course caused by personal or work-related pressures are advised that the matter should, in the first instance, be discussed with the Program Director.

Queries and counselling

The Program Director and Subject Coordinators are course counsellors, and queries of a general nature should be addressed to them. However, matters concerning a single subject should be raised, in the first instance, with the lecturer in that subject.
Bachelor of Building in Construction Management

- Course code: AB03
- UAC code: 601013
- Testamur title: Bachelor of Building in Construction Management
- Abbreviation: BBuild
- Course fee: HECS (local) $6,000 per semester (international)

Aims

The Building graduate is concerned with management of the construction process. Extensive technological skills go hand in hand with the capacity to manage people, materials, equipment and plant in order to carry out this task as effectively as possible.

A great deal of the learning occurs through assignment work in which students participate in projects which simulate the conditions of actual practice. Hence students know what roles to expect and learn to exercise the judgment required of a professional.

Course structure

The course may be undertaken either full time or part time and to graduate a student has to complete 192 credit points of academic study which includes 8 credit points of electives. The course focuses on resource and site management but also covers areas such as materials, structures, services, estimating, law, economics and construction technology.

Students are required to undertake practical studies as part of this program which for full-time students would typically involve field work and simulated office practice and for part-time students appropriate employment for the majority of their course. For detailed requirements advice should be sought from the Course Program.

It should be noted that some subject streams will involve prerequisites whereby an earlier subject in a stream will have to be completed before undertaking a subsequent subject. These streams are Construction, Construction Project, Structures, Law, Materials, Estimating, Drawing and Surveying and Services. Approval will have to be obtained before these requirements can be varied.

Before each yearly enrolment students should seek academic advice about the requirements for subjects they are about to undertake, their eligibility for doing so and the suitability of the subjects to their progression.

Professional membership

Upon graduation, students may be eligible to apply for membership of a number of relevant professional bodies. While enrolled at the University, students may also take out student membership.

Students should note that the Faculty's regulations regarding approved practical experience as set out apply to the award of its degrees, are different from, and may not meet, the practical experience requirements demanded by the professional bodies as a condition of membership.

Students should bear in mind their future professional intentions when satisfying the practical experience requirements for their degree.

Australian Institute of Building (AIB)

The Australian Institute of Building (AIB) is the main professional association for building students and is recognised by Royal Charter.

The Bachelor of Building in Construction Management course satisfies the academic requirements for corporate membership of the Australian Institute of Building. There are additional professional experience requirements necessary for chartered membership concerning which students should refer to the AIB for details.

Bachelor of Land Economics

- Course code: AB06
- UAC code: 691033
- Testamur title: Bachelor of Land Economics
- Abbreviation: BLandEc
- Course fee: HECS (local) $6,000 per semester (international)

Aims

The objectives of the Land Economics course are as follows:

- to produce a broadly educated graduate prepared for a career in the property industry
- to equip students with an understanding of the legalities, principles, and processes required in order that they can fill a professional role as a property analyst, valuer, real estate agent, business agent, stock and station agent, auctioneer, property manager or a number of these
- to develop an appreciation of a professional ethic which emphasises responsibility and responsiveness to community needs.

The course satisfies the educational requirements for licensing as a real estate agent, on-site residential property manager, business agent, stock and station agent, strata managing agent, registration as a valuer and practice as a project manager.

Professional membership

Upon graduation, students may be eligible to apply for membership of a number of relevant professional bodies. While enrolled at the University, students may also take out student membership.

Students should note that the Faculty’s regulations regarding approved practical experience as set out apply to the award of its degrees, and are different from, and may not meet, the practical experience requirements demanded by the professional bodies as a condition of membership.

Students should bear in mind their future professional intentions when satisfying the practical experience requirements for their degree.

Although reference should be made to specific organisations, a guide to the requirements of the various bodies for admission to full membership is as follows.
Australian Property Institute (API)
Student membership is actively sought by the Institute, and students are encouraged to join the various study groups, details of which are available from the Registrar.

The requirements for Associate Membership include the following:
(a) a degree in a recognised course of study, i.e. Bachelor of Land Economics at the University of Technology, Sydney
(b) a minimum of two years’ approved professional experience prior to application.

Under the provisions of the Valuers Registration Act 1974, valuers are required to be registered. Full details can be obtained from the Department of Fair Trading.

Real Estate Institute of NSW (REI)
The REI is the main professional body for real estate agency practice. Student membership is available and encouraged.

Amongst other things, membership entitles the student to receive the REI journal and participate in any of their Chapters, such as, Property Management, Commercial and Industrial, and Valuation.

Royal Institution of Chartered Surveyors (RICS)
The Bachelor of Land Economics degree is accredited as meeting all the academic requirements for full corporate membership of RICS. Upon completion of the degree students may apply to the RICS to undertake their practical experience requirements which comprise a further two years of supervised and approved experience in industry. The RICS conduct an Assessment of Professional Competence at the end of this period.

Industrial experience
In addition to attending classes, students are required to gain practical experience in appropriate professional or industrial organisations. Full-time students undertake practical studies as part of the program included in core subjects. They are also required to gain approved professional experience in the final two full-time years of their programs. Part-time students are required to enrol each year, except Year 1, in the professional/industrial experience subject and to supply details of the experience gained. Further details can be obtained from the Director of Program.

**Bachelor of Building in Construction Economics**

- **Course code:** AB04
- **UAC code:** 601023
- **Testamur title:** Bachelor of Building in Construction Economics
- **Abbreviation:** BBuild
- **Course fee:** HECS (local) $6,000 per semester (international)

### Aims

The Bachelor of Building in Construction Economics degree provides quantity surveying education in applied economics for the construction industry, and leads to a professional qualification in quantity surveying. Quantity surveyors provide financial and economic advice relating to the cost management of projects from the time of their conception and extending throughout the design, construction and deployment phases. Quantity surveyors are key professionals in the construction industry and their clients include developers, government agencies, building proprietors, architects and contractors.

The degree may be conferred with First or Second Class Honours for meritorious performance.

### Attendance

For part-time students attendance at University is on a two half-day release basis for 13 weeks each semester, but full-time students may be expected to attend at any time during the week. The course has been designed for each part-time year to have a maximum of four academic subjects. The contact hours allocated to each subject are nominal and will often be a combination of lectures, tutorials, workshops and self-directed teaching methods.

The course is designed so that students may transfer between part-time and full-time attendance patterns or between Construction Management and Construction Economics courses after Year 2 full time or Year 3 part time without incurring an extension to the duration of their course.

### Industrial experience

Undergraduate studies in Construction Economics are designed around the concept of cooperative education, and thus require concurrent practical experience as part of the program.
Part-time students are required to obtain the equivalent of 144 weeks (three years) approved industrial experience, comprising nominally four days per week full-time employment in the construction industry. Employment outside the construction industry may also be given some consideration. Industrial experience attained prior to commencement of the course will also be accepted subject to approval. Students must have at least 48 weeks (one year) approved experience prior to entering the final year of the course. Graduation will be delayed until the University is satisfied that its industrial experience requirements have been met.

Full-time students are required to obtain the equivalent of 48 weeks (240 days) approved industrial experience. Successful completion of the compulsory practical studies components of Construction 1–4 can contribute up to 24 weeks of the total requirement, the remaining experience necessarily coming from industry placement. Students must have at least 16 weeks (80 days) approved industry placement prior to entering the final year of the course and at least 24 weeks (120 days) approved industry placement prior to graduation. Graduation will be delayed until the University is satisfied that its industrial experience requirements have been met.

Advanced standing

Students with previous academic or industrial experience may be given recognition for prior learning (RPL) in the course. No student may be given advanced standing in excess of three-quarters of the course without the approval of Academic Board.

Students with advanced standing are given the opportunity to tailor their program of study in line with subjects completed previously at other institutions. This flexibility encourages students to design their own individual learning experiences and enables efficient articulation without repetition. Identified areas of weakness can also be targeted and strengthened. Students will not be exempted from elective subjects due to previous study or qualifications.

Students given advanced standing are eligible to enter the course by way of the Semester Bridge, which runs as a full-time or part-time program and is delivered in an electronic distance learning mode.

There is a range of articulation pathways in the course, and students holding previous qualifications should contact the Faculty Office for further information.

Professional membership

Successful completion of the undergraduate course satisfies the educational requirements for admission to the following professional organisations.

Royal Institution of Chartered Surveyors (RICS)

The Royal Institution of Chartered Surveyors (RICS) is a highly valued and respected professional association in the international community. The Bachelor of Building in Construction Economics degree is accredited as meeting all the academic requirements for full corporate membership of the RICS. Upon completion of the degree students may apply to the RICS to undertake their practical experience requirements which comprise a further two years of supervised and approved experience in industry. The RICS conduct an Assessment of Professional Competence at the end of this period.

Australian Institute of Quantity Surveyors (AIQS)

The Australian Institute of Quantity Surveyors (AIQS) is the main professional body for quantity surveyors in Australia. Successful completion of the Bachelor of Building in Construction Economics degree is accredited for admission to full corporate membership, though particular experience requirements also need to be met. Part-time students can obtain this experience during the last two years of their course so that they will be eligible for interview (Assessment of Professional Competence) immediately upon completion. Full-time students must obtain the two years' experience after completion of their course.

Australian Institute of Building (AIB)

The Australian Institute of Building (AIB) is the main professional association for building students and is recognised by Royal Charter. The Bachelor of Building in Construction Economics degree is accredited as meeting all the academic requirements for full corporate membership of the AIB. Before becoming a Chartered Building Professional, additional practical experience requirements and an interview are necessary. Students should refer to the AIB for full details.
Other professional bodies
The Bachelor of Building in Construction Economics degree is also accredited by the New Zealand Institute of Quantity Surveyors (NZIQS), the Hong Kong Institute of Surveyors (HKIS), the Institute of Surveyors, Malaysia (ISM), the Singapore Institute of Surveyors and Valuers (SISV), the Institute of Quantity Surveyors of Kenya (IQSK), the Nigerian Institute of Quantity Surveyors (NIQS), and the Sri Lanka Institute of Quantity Surveyors (SLIQS). Graduates can also apply to join the Chartered Institute of Building (CIOB) based in the UK, via an AIB reciprocity agreement.

Semester Bridge

Additional program

| 16225 QS Project (Summer) | 12cp |
| 16300 Industry Studies    | 12cp |

Note: The Semester Bridge is available only to students who are eligible for advanced standing.
COMBINED DEGREES

New Bachelor of Design courses commenced for students entering first year in 1999, however, students undertaking second, third and fourth year remain in the old course. From 2000, all students will continue in or transfer to the new course. For further details of the new course refer to the section on Bachelor of Design.

Bachelor of Design in Fashion and Textile Design/Bachelor of Arts in International Studies

- Course code: DF02
- UAC code: 609260
- Testamur title: Bachelor of Design Bachelor of Arts in International Studies
- Abbreviation: BDesign BA
- Course fee: HECS (local) $6,500 per semester (international)

Fashion and textile design is concerned with the design of fashion clothing, surface and textiles, their related fields and technologies.

The aim of the combined degree in Fashion and Textile Design and International Studies is to produce graduates who have developed perspectives and skills that will enable them to meet the professional demands of an internationalised marketplace.

The Bachelor of Design in Fashion and Textile Design/Bachelor of Arts in International Studies is a six-year degree in which the study of Fashion and Textile Design is integrated with a major in the language and culture of another country. Students spend the fourth year of study at a university overseas.

The combined degree program in Fashion and Textile Design and International Studies provides students with additional practical skills, in particular those that make them aware of the international contexts of fashion and textile design by providing them with the opportunity to acquire knowledge of a language and culture other than English.

Course structure

The Bachelor of Design in Fashion and Textile Design curriculum is based on a problem-solving approach and self-directed learning. Students take a common first semester of multidisciplinary study. Fashion and Textile Design studies commence in the second semester and focus on core design fundamentals of both fashion and textiles, with a strong base of technology across both disciplines. All students are required to gain practical experience in professional design practice to augment and complement their academic studies.

The Bachelor of Arts in International Studies requires undergraduates to study a major – a region or country specialisation – over a minimum of three years. In Sydney, students study language and culture for at least two years, followed by a period of study overseas.

In the International Studies Program, students focus on one of the following countries or majors: Argentina, Chile, China, France, Germany, Indonesia, Italy, Japan, Malaysia, Mexico, Russia, Spain and Thailand. The availability of the Russian major is currently being reviewed. There is also a Heritage major that permits students with previous exposure to a language and culture to continue their study in countries such as Greece, Hong Kong, Korea, Poland, Taiwan and Vietnam.

Australia and the Asia-Pacific is only available as a major to International Students. International Students may access one of the other majors offered provided that the country they choose as their major is able to grant them a visa to study there. This would need to be determined prior to commencing subjects within the International Studies major. If a visa cannot be granted, then it will not be possible to undertake the chosen major.

Students are admitted to the International Studies program with no guarantee of entry to a specific major, though every effort is made to meet student preferences.

Each of the specialisations within the International Studies program is 96 credit points, and includes 32 credit points (four 8 credit point subjects) of instruction in Language and Culture; 8 credit points of study of Comparative Social Change; 8 credit points of study of Contemporary Society; and 48 credit points (two semesters) of study at a university or institution of higher education in the country or region of specialisation.

There are no prior language requirements for the International Studies component of this combined degree, except for programs within the Heritage major.
Arrangements for In-country Study

All students are required to complete four consecutive semesters of study of Language and Culture before proceeding to In-country Study. There are different classes available for students according to their level of language proficiency.

The Institute for International Studies makes arrangements for students to spend two semesters of In-country Study at an institution of higher education in the country of their major. The costs of tuition in host institutions overseas and travel between Sydney and the designated host institutions are borne by UTS except in cases where a scholarship has been awarded to the student with provision for these costs. Under those circumstances, the funds that would have otherwise been allocated towards the student’s tuition and travel will be redirected to support the In-country Study program in general. In most cases, the cost of living for the period of In-country Study will not exceed the cost of living away from home in Sydney. However, students should be aware that the cost of living in some countries – notably Japan – may be higher than in Sydney.

Course program

Year 1

**Stage 1**
- 83100 Fashion and Textile Fundamentals 6cp
- 85100 Common Design Project 6cp
- 85200 Design Communications 6cp
- 85300 Research Methods 3cp
- 85400 Design History 3cp

**Stage 2**
- 83250 Design and Technique 6cp
- 83240 Textile Systems 6cp
- 83230 F&T Communications 1 6cp
- 85420 Introduction to Thinking Design 2cp

Year 2

**Stage 3**
- 83331 Fashion Design 1 6cp
- 83333 F&T Communications 2 6cp
- 883xx Elective 6cp
- 971xxx Language and Culture 1 8cp

**Stage 4**
- 83441 Fashion Design 2 6cp
- 83443 Marketing and Management 6cp
- 884xx Elective 6cp
- 972xxx Language and Culture 2 8cp

Year 3

**Stage 5**
- 83332 Print Technology 6cp
- 85430 Design Ecology 2cp
- 50140 Comparative Social Change 8cp
- 973xxx Language and Culture 3 8cp

**Stage 6**
- 83442 Sustainable Practice 6cp
- 85440 Design, Culture and Contemporary Thought 2cp
- 976xxx Contemporary Society 8cp
- 974xxx Language and Culture 4 8cp

Year 4

**Stage 7**
- 977xxx In-country Study 1 24cp

**Stage 8**
- 978xxx In-country Study 2 24cp

Year 5

**Stage 9**
- 83551 Fashion Design 3 6cp
- 83552 Digital Fashion and Textiles (Elective) 6cp
- 83553 Research Project F&T 6cp
- 85450 Design and Asia 2cp
- 8xxxx Elective 6cp

**Stage 10**
- 83661 Fashion Design Elective 6cp
- 83662 Design and Industry 6cp
- 83663 Professional Practice F&T 6cp
- 85460 Theories of Change 2cp
- 8xxxx Elective 6cp

Year 6

**Stage 11**
- 83771 International Design 6cp
- 83780 Research Dissertation F&T 6cp
- 85700 Interdisciplinary Project 6cp
- 85470 Criticisms and Argument 2cp

**Stage 12**
- 83880 Major Project F&T 24cp

1 This is an example of a Design Theory subject which may be offered.

Further details of International Studies subjects and elective options may be found in the 2001 handbook for the Institute for International Studies. Queries regarding the International Studies component of the course should be addressed to the Institute itself on (02) 9514 1574.

Combined degree students are required to confirm, during the University pre-enrolment and enrolment period, the subjects they intend to take for the year with the Institute at 10 Quay Street, Haymarket, Sydney.
Bachelor of Design in Interior Design/ Bachelor of Arts in International Studies

- Course code: DT02
- UAC code: 609280
- Testamur title: Bachelor of Design Bachelor of Arts in International Studies
- Abbreviation: BDesign BA
- Course fee: HECS (local) $6,500 per semester (international)

Interior design is concerned with the design of all facets of the interior environment in response to the particular human activities occurring within. The interior designer works with the building construction and product supply industries to create interior environments for specific purposes.

The aim of the combined degree in Interior Design and International Studies is to produce graduates who have developed perspectives and skills that will enable them to meet the professional demands of an internationalised marketplace.

The Bachelor of Design in Interior Design/ Bachelor of Arts in International Studies is a six-year degree in which the study of Interior Design is integrated with a major in the language and culture of another country. Students spend the fourth year of study at a university overseas.

The combined degree program in Interior Design and International Studies provides students with additional practical skills, in particular those that make them aware of the international contexts of interior design by providing them with the opportunity to acquire knowledge and understanding of a language and culture other than English.

Course structure

The Bachelor of Design in Interior Design curriculum is based on a problem-solving approach and self-directed learning. Students take a common first semester of multidisciplinary study. Interior Design studies commence in the second semester and focus on core design fundamentals of interior design, with a strong base of technology. All students are required to gain practical experience in professional design practice to augment and complement their academic studies.

The Bachelor of Arts in International Studies requires undergraduates to study a major – a region or country specialisation – over a minimum of three years. In Sydney, students study Language and Culture for at least two years, followed by a period of study overseas.

In the International Studies Program, students focus on one of the following countries or majors: Argentina, Chile, China, France, Germany, Indonesia, Italy, Japan, Malaysia, Mexico, Russia, Spain and Thailand. The availability of the Russian major is currently being reviewed. Bachelor of Design in Industrial Design/
Bachelor of Arts in International Studies

- Course code: DD02
- UAC code: 609270
- Testamur title: Bachelor of Design Bachelor of Arts in International Studies
- Abbreviation: BDesign BA
- Course fee: HECS (local) $6,500 per semester (international)

Industrial design is concerned with the design of products for the manufacturing industry. The industrial designer works with manufacturers and has the responsibility not only for the visual and tactile qualities of products but also to a large extent for their safety, efficiency and cost effectiveness.

The aim of the combined degree in Industrial Design and International Studies is to produce graduates who have developed perspectives and understandings that will enable them to meet the professional demands of an internationalised marketplace.

The Bachelor of Design in Industrial Design/Bachelor of Arts in International Studies is a six-year degree in which the study of Industrial Design is integrated with a major in the language and culture of another country. Students spend the fourth year of study at a university overseas.

The combined degree program in Industrial Design and International Studies provides students with additional practical skills, in particular those that make them aware of the international contexts of Industrial Design by providing the opportunity to acquire knowledge and understanding of a language and culture other than English.

Course structure

The Bachelor of Design in Industrial Design curriculum is based on a problem-solving approach and self-directed learning with significant emphasis on multidisciplinary study. All students are required to gain practical experience in professional design practice to augment and complement their academic studies.

The Bachelor of Arts in International Studies requires undergraduates to study a major – a region or country specialisation – over a minimum of three years. In Sydney, students study Language and Culture for at least two years, followed by a period of study overseas.

In the International Studies Program, students focus on one of the following countries or majors: Argentina, Chile, China, France, Germany, Indonesia, Italy, Japan, Malaysia, Mexico, Russia, Spain and Thailand. The availability of the Russian major is currently being reviewed. There is also a Heritage major that permits students with previous exposure to a language and culture to continue their study in countries such as Greece, Hong Kong, Korea, Poland, Taiwan and Vietnam.

Australia and the Asia-Pacific is only available as a major to International Students. International Students may access one of the other majors offered provided that the country they choose as their major is able to grant them a visa to study there. This would need to be determined prior to commencing subjects within the International Studies major. If a visa cannot be granted, then it will not be possible to undertake the chosen major.

Students are admitted to the International Studies program with no guarantee of entry to a specific major, though every effort is made to meet student preferences.

Each of the specialisations within the International Studies program is 96 credit points, and includes 32 credit points (four 8 credit point subjects) of instruction in Language and Culture; 8 credit points of study of Comparative Social Change; 8 credit points of study of Contemporary Society; and 48 credit points (two semesters) of study at a university or institution of higher education in the country or region of specialisation.

There are no prior language requirements for the International Studies component of this combined degree, except for programs within the Heritage major.

Arrangements for In-country Study

All students are required to complete four consecutive semesters of study of Language and Culture before proceeding to In-country Study. There are different classes available for students according to their level of language proficiency.

The Institute for International Studies makes arrangements for students to spend two semesters of In-country Study at an institution of higher education in the country of their major. The costs of tuition in host institutions
overseas and travel between Sydney and the designated host institutions are borne by UTS except in cases where a scholarship has been awarded to the student with provision for these costs. Under those circumstances, the funds that would have otherwise been allocated towards the student’s tuition and travel will be redirected to support the In-country Study program in general. In most cases, the cost of living for the period of In-country Study will not exceed the cost of living away from home in Sydney. However, students should be aware that the cost of living in some countries — notably Japan — may be higher than in Sydney.

¹ This is an example of a Design Theory subject which may be offered.

Further details of International Studies subjects and elective options may be found in the 2001 handbook for the Institute for International Studies. Queries regarding the International Studies component of the course should be addressed to the Institute itself on (02) 9514 1574.

Combined degree students are required to confirm, during the University pre-enrolment and enrolment period, the subjects they intend to take for the year with the Institute at 10 Quay Street, Haymarket, Sydney.
Bachelor of Design in Visual Communication / Bachelor of Arts in International Studies

- Course code: DV02
- UAC code: 609290
- Testamur title: Bachelor of Design Bachelor of Arts in International Studies
- Abbreviation: BDesign BA
- Course fee: HECS (local) $7,000 per semester (international)

Design of visual communication involves the creation, processing and production of messages in a visual form. Designers in this area are employed to use their creativity and knowledge to determine the optimum effectiveness of the message, visually communicated to a selected group of people. The message may be designed to instruct, direct, inform, entertain or persuade, most often incorporating words and images produced freehand or with the assistance of photographic, video and digital technologies. In visual communication, designed messages are reproduced or transmitted to the end user/viewer through print or screen media.

The aim of the combined degree in Visual Communication and International Studies is to produce graduates who have developed perspectives and understandings that will enable them to meet the professional demands of an internationalised marketplace.

The Bachelor of Design in Visual Communication/Bachelor of Arts in International Studies is a six-year degree in which the study of Visual Communication is integrated with a major in the language and culture of another country. Students spend the fourth year of study at a university overseas.

The combined degree program in Visual Communication and International Studies provides students with additional practical skills, in particular those that make them aware of the international contexts of visual communication by providing the opportunity to acquire knowledge and understanding of a language and culture other than English.

Course structure

The Bachelor of Design in Visual Communication curriculum is based on a problem-solving approach and self-directed learning with significant emphasis on multidisciplinary study. Visual Communication studies focus on an understanding of the way the design process is mediated by the contemporary sociopolitical framework within which it occurs. All students are required to gain practical experience in professional design practice to augment and complement their academic studies.

The Bachelor of Arts in International Studies requires undergraduates to study a major – a region or country specialisation – over a minimum of three years. In Sydney, students study Language and Culture for at least two years, followed by a period of study overseas.

In the International Studies Program, students focus on one of the following countries or majors: Argentina, Chile, China, France, Germany, Indonesia, Italy, Japan, Malaysia, Mexico, Russia, Spain and Thailand. The availability of the Russian major is currently being reviewed. There is also a Heritage major that permits students with previous exposure to a language and culture to continue their study in countries such as Greece, Hong Kong, Korea, Poland, Taiwan and Vietnam.

Australia and the Asia-Pacific is only available as a major to International Students. International Students may access one of the other majors offered provided that the country they choose as their major is able to grant them a visa to study there. This would need to be determined prior to commencing subjects within the International Studies major. If a visa cannot be granted, then it will not be possible to undertake the chosen major.

Students are admitted to the International Studies program with no guarantee of entry to a specific major, though every effort is made to meet student preferences.

Each of the specialisations within the International Studies program is 96 credit points, and includes 32 credit points (four 8 credit point subjects) of instruction in Language and Culture; 8 credit points of study of Comparative Social Change; 8 credit points of study of Contemporary Society; and 48 credit points (two semesters) of study at a university or institution of higher education in the country or region of specialisation.

There are no prior language requirements for the International Studies component of this combined degree, except for programs within the Heritage major.
Arrangements for In-country Study

All students are required to complete four consecutive semesters of study of Language and Culture before proceeding to In-country Study. There are different classes available for students according to their level of language proficiency.

The Institute for International Studies makes arrangements for students to spend two semesters of In-country Study at an institution of higher education in the country of their major. The costs of tuition in host institutions overseas and travel between Sydney and the designated host institutions are borne by UTS except in cases where a scholarship has been awarded to the student with provision for these costs. Under those circumstances, the funds that would have otherwise been allocated towards the student's tuition and travel will be redirected to support the In-country Study program in general. In most cases, the cost of living for the period of In-country Study will not exceed the cost of living away from home in Sydney. However, students should be aware that the cost of living in some countries—notably Japan—may be higher than in Sydney.

1 This is an example of a Design Theory subject which may be offered.

Further details of International Studies subjects may be found in the 2001 handbook for the Institute for International Studies. Queries regarding the International Studies component of the course should be addressed to the Institute itself on (02) 9514 1574.

Combined degree students are required to confirm, during the University pre-enrolment and enrolment period, the subjects they intend to take for the year with the Institute at 10 Quay Street, Haymarket, Sydney.
Bachelor of Building in Construction Economics/
Bachelor of Arts in International Studies

- Course code: AB08
- UAC code: 609180
- Testamur title: Bachelor of Building in Construction Economics
  Bachelor of Arts in International Studies
- Abbreviation: BBuild BA
- Course fee: HECS BA
  $6,000 per semester (international)

The Bachelor of Building in Construction Economics and Bachelor of Arts in International Studies is a six-year degree program combining the Bachelor of Building in Construction Economics program with the University's Bachelor of Arts in International Studies.

The Construction Economics degree program provides quantity surveying education in applied economics for the construction industry, and leads to a professional qualification in quantity surveying. Quantity surveyors provide financial and economic advice relating to the cost management of projects for the time of their conception throughout the design, construction and deployment phases. The aim of the combined degree is to provide graduates not only with those skills, but also the ability to deal with other languages and cultures, both within Australia and internationally.

Course structure

Construction Economics covers all the important areas within the discipline and has a clear economic bias. A range of topics are dealt with including quantity surveying, economics, law, design, computing, management, materials science, estimating, construction and services. The construction subjects are a core element of the course. Students are required to undertake practical studies as part of these subjects which typically involve field work or simulated office practice.

The Bachelor of Arts in International Studies requires undergraduates to study a major – a region or country of specialisation – over a minimum of three years. In Sydney, students study Language and Culture for at least two years, followed by a period of study overseas.

In the International Studies Program, students focus on one of the following countries or majors: Argentina, Chile, China, France, Germany, Indonesia, Italy, Japan, Malaysia, Mexico, Russia, Spain and Thailand. The availability of the Russian major is currently being reviewed. There is also a Heritage major that permits students with previous exposure to a language and culture to continue their study in countries such as Greece, Hong Kong, Korea, Poland, Taiwan and Vietnam.

Australia and the Asia-Pacific is only available as a major to International Students. International Students may access one of the other majors offered provided that the country they choose as their major is able to grant them a visa to study there. This would need to be determined prior to commencing subjects within the International Studies major. If a visa cannot be granted, then it will not be possible to undertake the chosen major.

Students are admitted to the International Studies program with no guarantee of entry to a specific major, though every effort is made to meet student preferences.

Each of the specialisations within the International Studies program is 96 credit points, and includes 32 credit points (four 8 credit point subjects) of instruction in Language and Culture; 8 credit points of study of Comparative Social Change; 8 credit points of study of Contemporary Society; and 48 credit points (two semesters) of study at an institution of higher education in a country of the major.

There are no prior language requirements for the International Studies component of this combined degree, except for programs within the Heritage major.

Arrangements for In-country Study

All students are required to complete four consecutive semesters of study of Language and Culture before proceeding to In-country Study. There are different classes available for students according to their level of language proficiency.

The Institute for International Studies makes arrangements for students to spend two semesters of In-country Study at an institution of higher education in the country of their major. The costs of tuition in host institutions overseas and travel between Sydney and the designated host institutions are borne by UTS except in cases where a scholarship has been awarded to the student with provision for these costs. Under those circumstances, the funds that would have otherwise been allocated towards the student's tuition and travel will be redirected to support the In-country
Study program in general. In most cases, the cost of living for the period of In-country Study will not exceed the cost of living away from home in Sydney. However, students should be aware that the cost of living in some countries – notably Japan – may be higher than in Sydney.

Further details of International Studies subjects may be found in the 2001 handbook for the Institute for International Studies. Queries regarding the International Studies component of the course should be addressed to the Institute itself on (02) 9514 1574.

Combined degree students are required to confirm, during the University pre-enrolment and enrolment period, the subjects they intend to take for the year with the Institute at 10 Quay Street, Haymarket, Sydney.
Bachelor of Building in Construction Management/ Bachelor of Arts in International Studies

- Course code: AB09
- UAC code: 609190
- Testamur title: Bachelor of Building in Construction Management Bachelor of Arts in International Studies
- Abbreviation: BBuild BA
- Course fee: HECS (local) $6,000 per semester (international)

The Bachelor of Building in Construction Management/Bachelor of Arts in International Studies is a six-year degree program in which Construction Management studies are combined with International Studies. The Building graduate is concerned with management of the construction process. Extensive technological skills are required alongside the capacity to manage people, materials, equipment and plant in order to carry out this task as effectively as possible. The aim of the combined degree in Construction Management and International Studies is to produce graduates who have not only those skills but also developed perspectives and understandings that will enable them to meet the demands of an internationalised professional environment.

The combined degree program in Building in Construction Management and International Studies provides students specialising in Construction Management with additional practical skills by providing the opportunity to acquire knowledge and understanding of a language and culture other than English.

Course structure

To graduate a student is required to have completed 288 credit points: 192 credit points in Construction Management; and 96 credit points in International Studies. Students are also required to undertake periods of approved industrial training. The degree may be conferred with First or Second Class Honours for meritorious performance.

Construction Management concerns the management of the construction stage of building projects on time, within estimated cost targets and to the level of quality established in the contract documents, and fulfilling the needs of the community. The course focuses on resource and site management but also covers areas such as materials, structures, services, estimating, law, economics and construction technology.

Students are required to undertake practical studies as part of these subjects which typically involve field work or simulated office practice.

The Bachelor of Arts in International Studies requires undergraduates to study a major — a region or country of specialisation — over a minimum of three years. In Sydney students study Language and Culture for at least two years, followed by a period of study overseas. In the International Studies Program, students focus on one of the following countries or majors: Argentina, Chile, China, France, Germany, Indonesia, Italy, Japan, Malaysia, Mexico, Russia, Spain and Thailand. The availability of the Russian major is currently being reviewed. There is also a Heritage major that permits students with previous exposure to a language and culture to continue their study in countries such as Greece, Hong Kong, Korea, Poland, Taiwan and Vietnam.

Australia and the Asia-Pacific is only available as a major to International Students. International Students may access one of the other majors offered provided that the country they choose as their major is able to grant them a visa to study there. This would need to be determined prior to commencing subjects within the International Studies major. If a visa cannot be granted, then it will not be possible to undertake the chosen major.

Students are admitted to the International Studies program with no guarantee of entry to a specific major, though every effort is made to meet student preferences.

Each of the specialisations within the International Studies program is 96 credit points, and includes 32 credit points (four 8 credit point subjects) of instruction in Language and Culture; 8 credit points of study of Comparative Social Change; 8 credit points of study of Contemporary Society; and 48 credit points (two semesters) of study at an institution of higher education in a country of the major.

There are no prior language requirements for the International Studies component of this combined degree, except for programs within the Heritage major.

Arrangements for In-country Study

All students are required to complete four consecutive semesters of study of Language and Culture before proceeding to In-country
Study. There are different classes available for students according to their level of language proficiency.

The Institute for International Studies makes arrangements for students to spend two semesters of In-country Study at an institution of higher education in a country of their major. The costs of tuition in host institutions overseas and travel between Sydney and the designated host institutions are borne by UTS except in cases where a scholarship has been awarded to the student with provision for these costs. Under those circumstances, the funds that would have otherwise been allocated towards the student’s tuition and travel will be redirected to support the In-country Study program in general. In most cases, the cost of living for the period of In-country Study will not exceed the cost of living away from home in Sydney. However, students should be aware that the cost of living in some countries – notably Japan – may be higher than in Sydney.

Further details of International Studies subjects may be found in the 2001 handbook for the Institute for International Studies. Queries regarding the International Studies component of the course should be addressed to the Institute itself on (02) 9514 1574.

Combined degree students are required to confirm, during the University pre-enrolment and enrolment period, the subjects they intend to take for the year with the Institute at 10 Quay Street, Haymarket, Sydney.
Bachelor of Land Economics/Bachelor of Arts in International Studies

- Course code: AB10
- UAC code: 609200
- Testamur title: Bachelor of Land Economics Bachelor of Arts in International Studies
- Abbreviation: BLandEc BA
- Course fee: HECS (local) $6,000 per semester (international)

The Bachelor of Land Economics/Bachelor of Arts in International Studies is a six-year degree which aims to produce broadly educated graduates prepared for careers in the property industry, and to equip students with an understanding of the legalities, principles and processes required in those professional careers. The combined degree program in Land Economics and International Studies will provide graduates not only with the necessary skills in those areas of expertise, but also develop perspectives and understandings that will enable them to meet the demands of an internationalised professional environment.

The course leads to the award of a Bachelor of Land Economics degree that is granted with Honours where a high standard has been achieved. The degree, as awarded by UTS, is the professionally accepted qualification for employment as a land economist, valuer and real estate agent, on-site residential property manager, business agent and stock and station agent.

The combined degree program in Land Economics and International Studies provides students specialising in Land Economics with additional practical skills by providing the opportunity to acquire knowledge and understanding of a language and culture other than English.

Course structure

To graduate a student is required to have completed 264 credit points: 168 credit points in Land Economics; and 96 credit points in International Studies.

The Bachelor of Arts in International Studies requires undergraduates to study a major – a region or country specialisation – over a minimum of three years. In Sydney, students study Language and Culture for at least two years, followed by a period of study overseas.

In the International Studies Program, students focus on one of the following countries or majors: Argentina, Chile, China, France, Germany, Indonesia, Italy, Japan, Malaysia, Mexico, Russia, Spain and Thailand. The availability of the Russian major is currently being reviewed. There is also a Heritage major that permits students with previous exposure to a language and culture to continue their study in countries such as Greece, Hong Kong, Korea, Poland, Taiwan and Vietnam.

Australia and the Asia-Pacific is only available as a major to International Students. International Students may access one of the other majors offered provided that the country they choose as their major is able to grant them a visa to study there. This would need to be determined prior to commencing subjects within the International Studies major. If a visa cannot be granted, then it will not be possible to undertake the chosen major.

Students are admitted to the International Studies program with no guarantee of entry to a specific major, though every effort is made to meet student preferences.

Each of the specialisations within the International Studies program is 96 credit points, and includes 32 credit points (four 8 credit point subjects) of instruction in Language and Culture; 8 credit points of study of Comparative Social Change; 8 credit points of study of Contemporary Society; and 48 credit points (two semesters) of study at an institution of higher education in the country or region of specialisation.

Those who have not previously studied a language and culture other than English are as able to complete this program as those who have.

There are no prior language requirements for the International Studies component of this combined degree, except for programs within the Heritage major.

Arrangements for In-country Study

All students are required to complete four consecutive semesters of study of Language and Culture before proceeding to In-country Study. There are different classes available for students according to their level of language proficiency.

The Institute for International Studies makes arrangements for students to spend two semesters of In-country Study at an institution of higher education in a country of their major. The costs of tuition in host institutions overseas
and travel between Sydney and the designated host institutions are borne by UTS except in cases where a scholarship has been awarded to the student with provision for these costs. Under those circumstances, the funds that would have otherwise been allocated towards the student's tuition and travel will be redirected to support the In-country Study program in general. In most cases, the cost of living for the period of In-country Study will not exceed the cost of living away from home in Sydney. However, students should be aware that the cost of living in some countries—notably Japan—may be higher than in Sydney.

Further details of International Studies subjects may be found in the 2001 handbook for the Institute for International Studies. Queries regarding the International Studies component of the course should be addressed to the Institute itself on (02) 9514 1574.

Combined degree students are required to confirm, during the University pre-enrolment and enrolment period, the subjects they intend to take for the year with the Institute at 16 Quay Street, Haymarket, Sydney.
POSTGRADUATE COURSES

DESIGN

The Faculty offers courses at Graduate Certificate, Graduate Diploma and Master's by coursework levels.

Regulations

These regulations are to be read in conjunction with the University's Rules and By-law, as outlined in the UTS Calendar 2001 and online at: www.uts.edu.au/div/publications/policies/rules/contents.html

Awards and graduation

A student is deemed to have completed the educational requirements for an award when he or she has achieved:

• in the case of the Graduate Certificate in Design and Technology, 16 credit points from required core subjects and 8 credit points from elective subjects
• in the case of the Graduate Diploma in Design, 16 credit points from required core subjects and 32 credit points from recommended and elective subjects
• in the case of the Master of Design (by coursework), 24 credit points from required core subjects, 24 credit points from recommended and elective subjects, and 24 credit points from an approved project and has submitted in the required format, two copies of a record of his or her project work.

Assessment

The assessment period is one semester.

Credit point system

Each subject offered for credit toward an award has a credit-point value which reflects the effort normally required to complete the subject's study and other work and which provides the basis for the subject's weighting factor. The minimum number of credit points for which a student can be enrolled in a semester is:

• in the case of the Graduate Certificate in Design and Technology, 8 credit points
• in the case of the Graduate Diploma in Design, 8 credit points
• in the case of the Master of Design (by coursework), 8 credit points.

The maximum number of credit points for which a student can be enrolled in a semester is:

• in the case of the Graduate Certificate in Design and Technology, 24 credit points
• in the case of the Graduate Diploma in Design, 32 credit points
• in the case of the Master of Design (by coursework), 32 credit points.

Graduate Certificate in Design and Technology

Course code: D059
Testamur title: Graduate Certificate in Design and Technology
Abbreviation: none
Course fee: $5,040 (local)

This is a part-time, full-fee-paying course of one year's duration.

Aim

This course offers a broad awareness of design and technology in a social and environmental context. It is also of value to those who do not have previous academic qualifications, yet have an interest in the methods and application of the processes of professional design practice.

Qualifications for admission

To qualify for entry to the Graduate Certificate in Design and Technology, an applicant shall hold a Bachelor's degree, diploma or equivalent qualification in an appropriate area, or submit other evidence of general and professional qualifications which indicates that the applicant possesses the educational preparation and capacity to pursue graduate studies.

Requirements

To qualify for the Graduate Certificate in Design and Technology, a student must achieve 24 credit points in not less than one semester of study.

Each subject has a value of 4 credit points. Sixteen credit points must be achieved from

1 This course is not offered to international students.
the core subjects; the remaining 8 credit points can be achieved from elective postgraduate subjects.

**Course program**

**Core studies**

Students must complete core subjects to the value of 16 credit points.

**Autumn semester**

---

**Graduate Diploma in Design**

- **Course code**: D052
- **Testamur title**: Graduate Diploma in Design
- **Abbreviation**: GradDipDesign
- **Course fee**: $10,080 (local) $7,500 per semester (international)

This is a one-year full-time or two-year part-time postgraduate course.

**Aim**

The course examines the nature and processes of design, the roles and responsibilities of designers and their profession, and the impact of design on society. It is particularly suited to graduates working in association with designers or managing design-based processes, as well as designers who wish to upgrade their skills and those concerned with teaching design. In consequence, the course aims to provide a useful understanding of design and the methods and values of designers.

**Qualifications for admission**

Applicants are normally expected to possess a Bachelor's degree or an equivalent qualification in an appropriate area, or be able to submit other evidence of general and professional experience which will indicate that the applicant possesses the educational preparation and capacity to pursue graduate studies.

**Requirements**

To qualify for the Graduate Diploma in Design, a student must achieve 48 credit points in not fewer than two semesters of part-time study. Sixteen credit points must be achieved from the core subjects. The remaining 32 credit points must be achieved from recommended and elective subjects.

**Course program**

Students must complete core subjects to the value of 16 credit points.

**Autumn semester**

<table>
<thead>
<tr>

</tbody>
</table>
12 credit points should be achieved from the following recommended subjects:

- Management Techniques and Design 4cp
- Marketing and Design 4cp
- Design History 4cp

**Electives**

Students must complete elective subjects to the value of 20 credit points, drawn from the following areas:

- Sociology of Design 4cp
- Human Factors and Design 4cp
- Photography for Designers 4cp
- Graphic Visualisation 4cp

**Basic computer elective subjects**

- Desktop Publishing 4cp
- Computer Graphics 1 4cp
- Computer Graphics 2 4cp
- Web Design 4cp

**Advanced computer elective subjects**

- Internet Design 4cp
- 3D Computer Animation 1 4cp
- 3D Computer Animation 2 4cp
- Multimedia 1 4cp
- Multimedia 2 4cp
- Digital Print Media 1 4cp
- Digital Print Media 2 4cp

**Note:** As elective subjects are offered in response to demand, not all subjects are available each semester.

---

### Master of Design (by coursework)

- **Course code:** 0051
- **Testamur title:** Master of Design
- **Abbreviation:** MDesign
- **Course fee:** $15,120 (local) $7,500 per semester (international)

The Master of Design is a one-and-a-half-year full-time or three-year part-time postgraduate course.

### Aim

This course provides practising graduates of design with an opportunity to achieve a Master’s degree by a combination of coursework and project work. Coursework areas include the management and marketing of design, the technological and social implications of design, design decision-making, design research methods, computer-aided design and the history of design.

Project work is undertaken in the third year of the course and provides an opportunity for the student to explore an area of particular interest or professional benefit.

### Qualifications for admission

To be accepted for admission to the Master of Design (by coursework) an applicant would normally be required to possess a recognised four-year degree (or equivalent) in an appropriate area of design, and have completed not less than two years of appropriate professional experience since graduation.

In exceptional circumstances, applicants who do not meet these criteria may be considered for entry by the Postgraduate Committee on the basis of their previous professional and academic experience.

### Requirements

To qualify for the Master of Design (by coursework) a student must achieve 72 credit points in not fewer than three semesters of study. Twenty-four credit points must be achieved from the project i.e. by two semesters' successful work on an approved project program. Twenty-four credit points must be achieved from the core coursework subjects. The remaining 24 credit points must be achieved from an approved program of recommended and elective coursework subjects.
Each student is assisted by the Director of Postgraduate Design Program to develop a pattern of study best suited to their needs, made up of coursework and project work.

**Course program**

**Core studies**

Students must complete core subjects to the value of 24 credit points.

- 82901 Psychology of Design 4cp
- 82903 Technological Change 4cp
- 82905 Research Methods 4cp
- 82917 Information Retrieval 4cp
- 82918 Design Ethics 4cp
- 82919 Sustainable Design 4cp

**Project**

Design Project is a program of an individual supervised research and/or design activity undertaken by each student, leading to the submission for assessment of an original body of work. A design project normally consists of four elements or phases — research, development, evaluation, and report.

Students must complete the project value of 24 credit points over two semesters part time, or one semester full time.

- 89917 Design Project (F/T) 12cp
- 89918 Design Project (F/T) 24cp

12 credit points should be achieved from the following recommended subjects:

- 81020 Management Techniques and Design 4cp
- 81920 Marketing and Design 4cp
- 81025 Design History 4cp

The remaining 12 credit points can be achieved from elective postgraduate subjects:

**Elective subjects**

- 82902 Sociology of Design 4cp
- 82009 Human Factors and Design 4cp

**Computer elective subjects**

- 81024 Computer Graphics 1 4cp
- 81924 Computer Graphics 2 4cp
- 81031 Web Design 4cp

**Advanced computer elective subjects**

- 81032 Internet Design 4cp
- 81925 3D Computer Animation 1 4cp
- 81030 3D Computer Animation 2 4cp
- 81033 Multimedia 1 4cp
- 81034 Multimedia 2 4cp
- 81035 Digital Print Media 1 4cp
- 81036 Digital Print Media 2 4cp

Note: As elective subjects are offered in response to demand, not all subjects are available each semester.

**ARCHITECTURE**

While a Master of Architecture degree by coursework is available, it is run in parallel with the final two years (Years 5 and 6) of the combined BA (Arch) and BArch program. See page 35 for details.

**BUILDING STUDIES**

The Faculty’s coursework postgraduate programs feature flexible and innovative attendance patterns, designed to suit busy practising professionals.

Attendance patterns range from part-time evening classes to full-time attendance of separate week-long or equivalent sessions (i.e. attendance over five consecutive days or two-and-a-half days on a given week, two-and-a-half days on another). This permits students to tailor study to their professional and personal lives and allows those living in the country, interstate or overseas to participate. Specific attendance dates are available from the Faculty Office.

**Regulations**

These regulations shall be read in conjunction with the University’s Rules and By-law, as indicated in the UTS Calendar 2001 and published online at: www.uts.edu.au/div/publications/policies/rules/contents.html

**Graded awards in Graduate Diploma courses**

Graded awards in Graduate Diploma courses (except for the Graduate Diploma in Planning) may be recommended by the Faculty Board for meritorious performance. Any such award is entirely within the discretion of the Faculty Board and the numeric calculation of level of performance is only one of the matters taken into consideration. The Faculty Board would not normally consider for graded awards any student who has not obtained the following numeric levels on the basis of a weighted average mark over the whole of the course:

- 75 and above — with distinction
- 65 to less than 75 — with credit.

**Discontinuation of registration**

The registration of a Graduate Certificate/ Diploma or Master’s candidate may be discontinued if the Faculty Board is dissatisfied with his or her progress.
Faculty Board may deem unsatisfactory progress to include the following:
1. failure in any two subjects
2. failure in a subject twice.

Graduate Certificate in Urban Estate Management
- Course code: AB64
- Testamur title: Graduate Certificate in Urban Estate Management
- Abbreviation: none
- Course fee: $5,400 (local)

Graduate Diploma in Urban Estate Management
- Course code: AB52
- Testamur title: Graduate Diploma in Urban Estate Management

- Testamur title: Master of Business Administration
- Abbreviation: MBA
- Course fee: $1,500 per six-credit-point subject (local) $7,000 per semester (international)

(in conjunction with the Faculty of Business)

Aims
Property is an exciting and challenging field that has become increasingly complex and professional over the last 20 years. The Urban Estate Management program is designed to provide:
- graduates in other fields such as architects, builders, planners, engineers, quantity surveyors, lawyers, project managers, economists and financiers with the opportunity to extend their professional qualifications and their understanding of property development and investment issues and techniques.

Expected outcomes of the program for students are as follows:
- understanding of the social, environmental, political, economic, managerial, legal and physical systems which contribute collectively to the effective management and development of property assets
- ability to initiate and/or create proposals for the development of property and, as part of this process, satisfy economic, social, financial, legal, planning and building constraints
- ability to determine the needs of the client organisation
- ability to establish an appropriate management structure, in order to allow the development to be completed as efficiently as possible
- ability to monitor the development process ensuring that all consultants, the project manager and contractors satisfy the client needs
- ability to estimate the social costs and benefits of development and, with community acceptance of this ability, to manage a property investment portfolio in order to provide an adequate return to the owner
- ability to satisfy the needs of tenants
- ability to protect, maintain, develop and enhance the urban environment
- development of a keen appreciation of the professional ethic which emphasises responsibility and responsiveness to the community to initiate and/or create proposals for the development of property.

Qualifications for admission
To qualify for entry to the Graduate Diploma in Urban Estate Management an applicant shall hold a Bachelor's degree or a Diploma in Technology; or possess an equivalent qualification; or submit other evidence of general and professional qualifications which demonstrate the applicant's educational preparation and capacity to pursue graduate studies.

1 This course is not offered to international students.
72 Postgraduate courses

The Graduate Certificate in Urban Estate Management is for applicants who have good practical experience but may lack the professional qualifications or academic entry requirements for the Diploma. Applicants will be assessed on their individual merits. On completion of the Certificate, articulation with the Graduate Diploma in Urban Estate Management or the Master of Land Economics is possible.

For both the Certificate and Diploma programs, all non-degree qualified applicants seeking admission are required to satisfy a Faculty panel that their experience is equal to the rigorous requirements of the course at whichever level they seek to enter.

New applicants will be considered for entry to the program in both Autumn and Spring semesters.

Requirements

The Graduate Diploma in Urban Estate Management is a two-year part-time or one-year full-time course. Students must achieve 48 credit points from the subjects listed below. There are opportunities for additional study leading to the awards of Master of Land Economics or a Master of Project Management.

The Graduate Certificate in Urban Estate Management is a one-year part-time, full-fee-paying course. Students must achieve 24 credit points selected from the subjects listed below which are shared with the diploma program.

All subjects are provided by the Faculty. Not all subjects will be offered in each year and availability will depend upon viable subject enrolments.

Graduate Diploma in Building Surveying and Assessment

- Course code: AB57
- Testamur title: Graduate Diploma in Building Surveying and Assessment
- Abbreviation: GradDipBuildSurvAssess
- Course fee: $9,600 (local)

Aims

The aims of this two-year part-time course are to enable students to lead, coordinate and/or participate in the Local Government approvals process as multiskilled professional building surveyors/certifiers, and to assess buildings on behalf of owners as an extension of building surveying to private enterprise beyond that of certification. To this end, graduates of the course will be competent in the following roles:

- multiskilled surveyors and facilitators within multidisciplinary groups engaged in the assessment and approval of urban projects on behalf of the community, through local government
- professional building surveyors engaged in the certification of complexes for compliance with both performance and prescriptive-based criteria as specified in the Building Code of Australia
- in presenting sound arguments which are cognisant of the social, legal, technical, safety, health and environmental issues, and are properly assessed and evaluated in any approval, study, assessment or certification
- in presenting comprehensive evidence before a Board of Referees or a Court as a professional expert witness.

The graduates of this course are intended to make a major contribution to the industry as well as the community as more informed professionals returning to their own disciplines, as building surveyors at senior levels in local government, or as consultant building surveyors involved in certification or assessing building performance for owners, users and investors.

Qualifications for admission

To qualify for entry an applicant should hold a Bachelor’s degree or a Diploma in Technology, or an equivalent qualification and have substantial relevant experience, or submit such other evidence that demonstrates the applicant’s capacity to pursue graduate studies.

Applicants will be expected to be competent in the areas of Building Technology and Engineering Fundamentals prior to starting the course. Further information on this can be obtained from the Course Director.

Requirements

The Graduate Diploma in Building Surveying and Assessment requires the completion of eight 6-credit-point subjects totalling 48 credit points. The course is undertaken by attendance at eight week-long (or equivalent) sessions over two years.

The course is divided into two blocks each containing four 6-credit-point subjects. Only one block of four subjects will run each year.

1 Faculty may not be accepting new students in 2001.

2 This course is not offered to international students.
Master of Building Surveying (Fire)\(^1\)

- Course code: AB71
- Testamur title: Master of Building Surveying
- Abbreviation: MBuildSurv
- Course fee: $14,400 (local)\(^2\)

Aims

The aim of this three-year part-time program is to enable students to lead and participate in the process of assessing the fire safety performance of buildings and to be competent in the overall assessment of a building’s performance in accordance with the Building Code of Australia. The course provides detailed instruction in fire dynamics, human behaviour in fire, fire safety science and fire safety systems as well as broader instruction in related building assessment issues. Students in this course will also be given instruction in, and be expected to apply, research methodology necessary to more fully examine issues related to building assessment.

At the conclusion of the course graduates should be able to:

- carry out detailed assessments of fire engineered designs prepared by others
- prepare fire engineered designs for buildings amenable to the application of standard fire engineering software packages
- provide strategic advice to clients at design stage on fire safety aspects
- analyse and advise on alternate fire safety solutions
- determine requirements for fire upgrading of existing buildings
- work closely with other professionals and authorities in revising/reviewing fire safety guidelines
- function as a principal consultant in the overall assessment of a building’s performance.

As well as being technically competent in the above students should be able to communicate their advice in a logical and coherent manner and be capable of defending their views in cases of litigation.

Qualifications for admission

To qualify for entry an applicant should hold a Bachelor’s degree or a Diploma in Technology (or an equivalent qualification) and have substantial relevant experience, or submit such other evidence that demonstrates the applicant’s capacity to pursue graduate studies. Applicants will be expected to be competent in the areas of Building Technology and Engineering Fundamentals prior to starting the course. Further information on this can be obtained from the Course Director.

Students who have or are completing the Graduate Diploma in Building Surveying and Assessment will be given advanced standing into the course, and credit will be given for subjects completed in that course which form part of the Master’s program.

Requirements

The Master of Building Surveying (Fire) requires the completion of eight 6-credit-point subjects plus a 24 credit point research project. The course is undertaken over three years part time with lecture-based subjects in the first two years. Lectures are delivered in a block mode with four one-week-long sessions per year. Only one block of four subjects will run each year.

\(^1\) Faculty may not be accepting new students in 2001.

\(^2\) This course is not offered to international students.
Graduate Certificate in Building Performance

- Course code: AB62
- Testamur title: Graduate Certificate in Building Performance
- Abbreviation: none
- Course fee: $4,800 (local)

Aims

The aims of this one-year part-time, full-fee-paying course are as follows:

- to provide an alternative entrance path for students wishing to enter the Graduate Diploma in Building Surveying and Assessment course who do not meet the entrance requirement (students who successfully complete this course may enter the Graduate Diploma in Building Surveying and Assessment course with advanced standing), and

- to provide an avenue for students to gain expertise in the area of building performance assessment.

Graduates of this course will have the following:

- an understanding of the building surveying certification process with particular reference to performance-based certification
- a detailed knowledge of the effect of fire on buildings, a knowledge of building regulations related to fire and how to prevent or minimise fire-related damage
- a detailed knowledge of how to assess the condition of the structure and a detailed knowledge of the environmental performance of buildings.

Qualifications for admission

To qualify for entry an applicant should hold a Bachelor's degree or a Diploma in Technology, or a tertiary qualification in a related field with at least three years' relevant experience and a demonstrated capacity to pursue graduate studies.

Requirements

The Graduate Certificate in Building Performance requires the completion of four 6-credit-point subjects totalling 24 credit points. The course is undertaken by attendance at four week-long (or equivalent) sessions over one year. This course will not run in the year 2001, but will be offered in 2002.

Graduate Certificate in Building Regulations

- Course code: AB63
- Testamur title: Graduate Certificate in Building Regulations
- Abbreviation: none
- Course fee: $4,800 (local)

Aims

The aims of this one-year part-time, full-fee-paying course are as follows:

- to provide an alternative entrance path for students wishing to enter the Graduate Diploma in Building Surveying and Assessment course who do not meet the entrance requirements (students who successfully complete this course may enter the Graduate Diploma in Building Surveying and Assessment course with advanced standing), and

- to provide an avenue for students to gain expertise in the area of building regulations.

Graduates of this course will have the following:

- an understanding of the legal framework of regulations
- an understanding of the planning process as it relates to building surveying
- an understanding of the building surveying certification process with particular reference to performance-based certification
- an understanding of the possible causes of damage to buildings, how to calculate the risks involved and how to manage them.

1 Faculty may not be accepting new students in 2001.
2 This course is not offered to international students.
Qualifications for admission
To qualify for entry an applicant should hold a Bachelor’s degree or a Diploma in Technology, or a tertiary qualification in a related field with at least three years’ relevant experience and a demonstrated capacity to pursue graduate studies.

Requirements

  $4,500 per semester (international)

The Planning program is designed to meet the needs of professionals in the many different aspects of urban development, including planners, architects, engineers, social planners, lawyers, managers, and those involved in finance, investment and development.

The Graduate Certificate in Planning is offered as a one-year part-time terminating course, articulating into the second year of the Graduate Diploma in Planning.

The Graduate Diploma in Planning is offered as a two-year part-time terminating course. The Master of Planning is offered as a two-year full-time or three-year part-time course. Students enrolled part-time complete the Graduate Diploma requirements in the first two years.

The Master of Planning degree has been accredited by the Royal Australian Planning Institute, and meets the educational requirements for corporate membership of the Institute.

Aims
The program focuses on the processes by which development takes place, and seeks to improve the quality of the physical planning and development control which form an

1 This course is not offered to international students.
integral part of those processes. The course covers the following topics: the major social and environmental issues of cities and regions; the economics and the practicalities of how development takes place; the processes of statutory planning and development control as subjects of academic inquiry; capable of much higher levels of performance; and planning decisions and their influence on costs, function, feasibility, building form and aesthetics.

The course adopts an integrated, skills-based educational approach and provides practical experience of innovative planning techniques.

The aims of the course are met by a significant component which emulates planning practice. This is feasible if the students have had relevant work experience since gaining an appropriate first degree, if they work in a related area, and if the attendance pattern provides for periods of intensive interaction in lectures, seminars and group project work.

The course has been structured around the core subjects, Planning 1A, 1B, 2A and 2B. These subjects consist primarily of a continuing major planning project. The other subjects have been structured to provide knowledge, context, concepts and techniques which can be applied in the project work.

Qualifications for admission
To be eligible for entry an applicant should possess an appropriate first degree and at least three years' relevant experience. Appropriate first degrees would include a Bachelor's degree in planning, architecture, geography, economics, land economics, commerce, law, engineering and building. Other qualifications may be accepted if supported by extensive relevant work experience. Work experience is relevant if it includes the holding of a responsible position related to the planning or administration of land, or the design, financing, regulation, construction or management of buildings or infrastructure.

Requirements
The Graduate Certificate in Planning requires the completion of subjects totalling 24 credit points, by attending four week-long sessions over one year.

The Graduate Diploma in Planning requires the completion of subjects totalling 48 credit points, by attending eight week-long sessions over two years.

The Master of Planning requires the completion of 72 credit points. In the three-year part-time program students attend 10 week-long sessions in the first two-and-a-half years and the equivalent of two weeks in the last half year. Full-time students attend six week-long sessions in each year of the two years of the program in conjunction with part-time students. Between attendance weeks they may attend additional classes and seminars.

(in conjunction with the Faculty of Business)

The Project Management program is designed for graduates and experienced professionals who want to upgrade their qualifications and skills to service clients better and keep pace with employer expectations and industry change. Project management attracts people with in-depth experience in many different fields and disciplines and is ideal for those seeking new or wider horizons of career opportunity.

\(^1\) This course is not offered to international students.
The program provides a comprehensive grounding in both the underlying principles and practical aspects of project management and addresses the Australian National Competency Standards for Project Management and PMBOK Guide.

Delivered through coursework, distance and workplace learning, the courses in the program focus on the project life cycle and key project management functions. Students also have opportunities to focus on specific project types and industries such as product development, IT, building and construction or organisational change.

Aims

The aims of the Project Management program are to develop practitioners who have the following skills and abilities:

- who can understand and apply project management principles and techniques
- lead a group of specialist professionals engaged in the overall management, planning and control of projects across a wide range of industries and technologies
- appreciate the roles and utilise the services of specialist consultants and contractors used in the project delivery process
- communicate effectively, and at all levels
- lead and motivate individuals and project teams
- make decisions and/or policies and/or solutions on the basis of either complete or incomplete information
- identify options and utilise the benefits of circumstance or unexpected opportunity
- establish clear guidelines for complex tasks/situations and facilitate completion no matter what problems arise
- satisfy economic, social, financial, legal, environmental and similar requirements
- work within all corporate, production, organisational and/or technological constraints
- evaluate the social impact, cost and benefits of the project and accurately assess community acceptance or otherwise
- evaluate completed projects and ensure information about lessons learnt is available for improvement of future projects and processes.

Qualifications for admission

To qualify for entry to either the Master in Project Management or the Graduate Diploma in Project Management an applicant shall hold a Bachelor's degree or an equivalent qualification, or submit such other evidence of general and professional qualifications which demonstrate the applicant's educational preparation and capacity to pursue graduate studies at the desired level. A minimum of five years' work experience is expected.

To qualify for entry to the Graduate Certificate in Project Management an applicant shall hold a Bachelor's degree or a Diploma in Technology or an equivalent qualification, or submit other evidence of general and professional qualifications such that it demonstrates the applicant's educational preparation and capacity to pursue graduate studies at the desired level.

It is usual for graduates from whatever discipline to be accepted for enrolment. It should also be noted that the function of project management itself is such that substantial work experience can provide a sound basis for formal study. The Project Management program is thus designed for professional project managers who wish to build on their knowledge base but who may lack degree or Diploma of Technology qualifications. Thus, all non-degree-qualified applicants must satisfy a Faculty interview panel that their practical experience is equal to the requirements of the course at the level they seek to enter.

Articulation from the Graduate Certificate to the Graduate Diploma and Master in Project Management will be allowed for Certificate students with the approval of the Director of Program.

Graduates of the Graduate Diploma in Urban Estate Management enrolling in the Master of Project Management, would be entitled to exemptions of up to 36 credit points plus credit up to an additional 12 credit points for credit points gained in the Graduate Diploma in Urban Estate Management in subjects from the Master of Project Management as electives, or in subjects shared by the Urban Estate Management and Project Management programs.
All students are expected to be proficient in English comprehension and expression. Applicants previously educated in a language other than English may be required to undertake an assessment as approved by the Academic Board.

Requirements

The program structure allows students a choice of entry requirements and study paths leading to the award of Graduate Certificate (24 credit points), Graduate Diploma (48 credit points), Master of Project Management (72 credit points), and Master of Business Administration (Project Management Major) (96 credit points). Each stage is self contained and can be undertaken through part-time or full-time study.

17218 Project Risk (RCC) 1.5cp
17219 Project Procurement (RCC) 1.5cp

1 For further information on Recognition of Current Competence (RCC) subjects see under Graduate Certificate in Project Management.

Exemptions will be allowed to a number equivalent to the credit points gained for all RCC subjects to bring the total number of credit points for the Graduate Certificate in Project Management to 24.

- Project Integration plus a minimum of 6 of the project competency subjects are required for award of a Graduate Certificate.
- Students will be required to enrol in a minimum of three RCC subjects at any one time.
- Evidence of competence in any units/project competency subjects not taken would be required as a prerequisite for award of a Graduate Certificate.
Master of Property Development

- Course code: AB58
- Testamur title: Master of Property Development
- Abbreviation: MPropDev
- Course fee: $10,800 (local) 
  $6,000 per semester (international)

Master of Business Administration (Property Development Major)

- Course code: B056
- Testamur title: Master of Business Administration
- Abbreviation: MBA
- Course fee: $1,500 per six-credit-point subject (local) 
  $7,000 per semester (international)

(in conjunction with the Faculty of Business)

Aims

The Master of Property Development will enable students to study matters relating to the land economics field, with the purpose of adding depth to their professional activity and minimising the cost to society in general and to clients in particular.

The course has three broad aims:

• to provide a thorough and advanced grounding in the land economics process, markets and institutions
• to develop a range of skills and analytical techniques which will be of use to those seeking to work as researchers, analysts, managers or consultants within the land economics sector, and
• to provide a learning environment which will encourage the further development of critical thinking and value judgment skills at a strategic level in the field of land economics.

Qualifications for admission

Admission to the course will be assessed on merit, given that a four-year full-time equivalent Bachelor’s degree in a land economics related discipline is a prerequisite qualification. Applicants will also need to demonstrate a minimum of three years experience in the land economics field.

More specifically, it is expected that graduates in Land Economics with a Bachelor’s degree from UTS will gain direct entry to the course. Graduates in this discipline from other universities or graduates in other disciplines may be required to complete a qualifying program. Holders of the Graduate Diploma in Urban Estate Management from UTS who also hold an undergraduate degree, and have completed the subject 17701 Environment and Control, will be granted full exemption from the first part-time year of the Master of Property Development. No exemptions will be granted from the second part-time year.

Requirements

The Master of Property Development requires the completion of 48 credit points on a two-year part-time or a one-year full-time basis. Students will undertake four sessions in the first year and two sessions and the Research Project subject in the second year.

- Testamur title: Master of Business Administration
- Abbreviation: MBA
- Course fee: $1,500 per six-credit-point subject (local) $7,000 per semester (international)

(in conjunction with the Faculty of Business) Facility Management (FM) is the fastest growing discipline in the construction and property industries. FM relates to the stewardship of existing facilities to enable effective operation, better business performance and higher levels of worker satisfaction and productivity. It demands a high level of technical knowledge, professional judgment and management skill. FM is recognised throughout the world as making an important contribution to the effective and sustainable operation of built assets and the organisational activities that function within them.

In one sense, FM is a fusion of development, design, construction and asset management functions and demands a breadth of education and training. It has become apparent in recent years that, to be effective, facility managers must deal with an increasing range of issues and challenges. Computer-aided facility management, strategic planning and environmental assessment are just a few of the new driving forces within the discipline.

Techniques like life-cost studies, value management and risk analysis have become critical tools in the search for more efficient built solutions. But once designed and constructed an ongoing evaluation and optimisation process begins that must deal with new technological improvements, changes in standards and ordinances, more stringent environmental legislation, tighter budgetary constraints and a greater selection of business choices.

With the expansion of existing infrastructure and the demands for development to be sustainable, FM will be the construction-related profession of the new millennium.

Aims

Education for facility managers and others involved in asset management activities is best provided at a postgraduate level. With this in mind, UTS has developed a suite of articulated courses which provide flexible pathways for professional people to enter this field or further improve their existing expertise. The courses build on existing knowledge acquired from undergraduate study and are founded on the four ideological pillars of sustainable futures, flexible learning, cooperative education and internationalisation.

Sustainable futures

Sustainable development is the most significant issue facing the global construction industry as we move into the new millennium. It is vital that professionals concerned with the built environment understand and apply techniques that can deliver and operate projects reflecting ecologically sustainable development (ESD) goals. Through proper design and management environmentally compatible solutions can be found that not only minimise the use of resources but also improve profit levels to organisations through lower operating costs and increased worker productivity. Success will enable society to maintain higher living standards and environmental quality that will ultimately lead to a more sustainable future.

Flexible learning

Education is rapidly becoming a global export and the main players in the future will be those that harness the power of information technology to

1 Internet delivery mode only.
services and simultaneously maintain or enhance their external reputation for quality. Flexible learning is the name given to a variety of teaching and administrative practices that meet the needs of a diverse student population in a contemporary social context. It is simply multiple ways of learning, so students have more options and are given more responsibility in the educational process. Flexibility relates to access, participation, course content, teaching strategies, responsiveness, assessment, resource materials and delivery systems. Flexible learning is a distinctive feature of UTS.

Cooperative education
UTS is one of the largest cooperative education institutions in the world. This feature has encouraged close links with business organisations and enabled graduates to be readily employable in industry. Courses can be studied on a part-time basis and rely on the input of professionals working concurrently in a range of fields associated with the built environment. Cohorts commonly comprise senior people seeking career development with backgrounds in architecture, development management, project management, facility management, construction, engineering, property and quantity surveying. While some courses can be completed full-time, all students interact together creating a unique learning mix that encourages the exchange of ideas and experiences in a multidisciplinary context.

Internationalisation
All courses address aspects of facility management that are relevant to practice in any part of the world. The Royal Institution of Chartered Surveyors (RICS) and the International Facility Management Association (IFMA) are two of many transnational professional bodies to which graduates may aspire. All subjects adopt an international syllabus and encourage the examination of local issues in a global context. Students enjoy the opportunity to discuss problems and solutions with others from different countries and cultures. This diversification leads to higher learning outcomes as well as the establishment of friendships and business contacts to an extent not normally encountered in conventional education. An opportunity is also provided for students to experience Australia first hand and to meet their classmates socially. UTS attracts students from over 40 different countries and is a true multicultural university.

Qualifications for admission
Admission to the courses is assessed on merit given that a Bachelor’s degree is the prerequisite qualification. Entry to the Master of Business Administration requires the equivalent of three years of full-time study. Entry to the Graduate Diploma in Building or the Master of Building requires the equivalent of four years of full-time study in a construction or property-related discipline. Applicants with 20 years’ relevant experience but without formal qualification will also be considered. Normally full-time entrants will need to demonstrate that they have at least three years’ relevant experience in the construction or property industries. This latter requirement will be waived, however, where applicants have obtained an Honours level Bachelor’s degree or where applicants are articulating directly from the UTS Bachelor of Building.

A Postgraduate Qualifying Program (commencing in April, August or December) is available for applicants who do not meet the normal academic prerequisites. The Qualifying Program, delivered via the Internet worldwide, is based on the final year of the UTS Bachelor of Building in Construction Economics degree. It comprises the following subjects offered over one calendar year part time:

**April–July**

- 16521 Cost Planning and Modelling 8cp
- 16534 Project Planning and Risk 8cp

**August–November**

- 16513 Economic Analysis 8cp
- 16523 Advanced Cost Engineering 8cp

**December–March**

- 16806 Legal Studies 2 8cp
- 16506 Quantity Surveying Practice 8cp 48cp

Entrants may be requested to complete 16, 32 or 48 credit points from the Qualifying Program depending on their previous qualifications. Admission to articulated courses is guaranteed for students who have successfully completed linked programs.

Requirements
Postgraduate courses in facility management are predominantly delivered in an electronic distance learning mode. Rather than conventional face-to-face discussions, content is conveyed through various technology formats including CD-ROM, software simulations,
Postgraduate courses

Electronic slideshow presentations, online documents, email and video conferencing. The learning style is contemporary and engaging, highly portable and flexible. While some adjustment may be required initially, students soon enjoy learning via these media. Online photographs and private messages also help overcome the absence of conventional social interaction.

UTS uses groupware called TopClass™ to link students together from around the world. An exclusive intranet is created for each course that enables public or private discussion and interaction amongst students and staff. Each course has online instructions relating to subject overview, resources, assessment and feedback. Although online help is available, it is rarely needed as the software is both intuitive and user-friendly.

Electronic delivery is well suited to postgraduate education where the participants are mature age learners, self-motivated and with complex family and work commitments. What may be lost through distance is more than gained through cultural interchange and exposure to the global industry scene.

The Internet-delivered courses create a simulated classroom environment that enables students to communicate easily with their academic instructors and their classmates, submit work electronically and receive prompt feedback. An electronic discussion list enables students to converse with others in the group at a time and from a location suitable to them.

Students ‘mix’ electronically with their classmates, some of whom are local and others from a number of different countries throughout the world. Students complete some parts of their course individually and some parts in groups.

Virtual study groups are established to enable review, discussion and critique processes. All student work is circulated to the group and collectively forms a substantial knowledge base for the courses.

The business core units employ a varied combination of assessment. The emphasis is on demonstration of competence in each of the eight component subjects. Classes for part-time students are organised in evenings, although flexible study options are increasingly being developed. The core units are available offshore in some cases.

Extensive notes are provided on CD-ROM covering all of the Internet-based subjects. Content is communicated in a variety of interesting ways that support online searching, bookmarking and text-selection techniques. Over A$20,000 of proprietary software is contained on the CD-ROM and provided free for educational purposes. Essential textbooks (one per subject) are included in the tuition fees and posted to students along with other course resources.

UTS has state-of-the-art video conferencing facilities that enable tutorials and workshops to be conducted remotely. Students can participate actively through ISDN links or passively through Internet broadcasts. More conventional tools like teleconferencing and facsimile can also be used as appropriate.

The UTS Library has a range of electronic resources available for offshore students. These include online databases for literature searches and downloadable documents that can be accessed and printed on demand. Despite the increasing wealth of electronic resources, access to a university-standard library in-country is still important.

Course programs

Master of Business Administration (Facility Management)

This course comprises 96 credit points of postgraduate education delivered in a combination of on-campus (face-to-face) and off campus (Internet) modes. It is offered as two years full-time or four years part-time study, although the course can be accelerated by studying over Summer and Winter semesters. Entry points are March and August each year. Attendance at UTS is required for the business core units, but these may be exempted where previous postgraduate qualifications in business administration are held. Completion of the UTS Master of Building provides advanced standing to the course of 48 credit points.

¹ 17540 Facility Economics can be substituted with 17560 Research Project where students are articulating from the Master of Building degree.
Master of Building in Construction Economics

This course comprises 48 credit points of postgraduate education also delivered worldwide via the Internet. It is offered as one year full-time or two years part-time study. Entry points are March and August each year. Attendance for one week at UTS is required in either July or December to present the findings of the major dissertation, otherwise the course can be undertaken off-campus. Completion of the UTS Graduate Diploma in Building provides advanced standing to the course of 24 credit points.

One year full-time program
Year 1
17550 Environmental Economics 24cp
17560 Research Project 24cp

Two year part-time program
Year 1
17550 Environmental Economics 24cp
Year 2
17560 Research Project 24cp

Graduate Diploma in Building in Construction Economics

This course comprises 36 credit points of postgraduate education delivered worldwide via the Internet. It is offered as 12 months part-time study. Entry points are March, August and December each year. Attendance for one week at UTS is required in mid February to present the industry case study results, otherwise the course can be undertaken off-campus. Advanced standing to the course of 12 credit points is available in certain cases.

One year part-time program
Year 1
16300 Industry Studies (Postgraduate) 12cp

¹ This chart illustrates the topic content of each course and their articulation design. It is permissible to progressively graduate with all three awards within an overall time frame of two-and-a-half calendar years.
The Faculty offers both PhD and Master’s programs by research and thesis in areas that relate to the three disciplines of the Faculty.

**Doctor of Philosophy**
- **Course codes**: A051
- **Testamur title**: Doctor of Philosophy
- **Abbreviation**: PhD
- **Course fee**: tba (local) $7,000 per semester (international)

The PhD is a University-wide degree which involves an intense period of supervised study and research, culminating in the submission of a thesis. The degree is awarded to candidates who, through original investigation, make a distinct and significant contribution to knowledge in their field of specialisation.

To qualify for admission to a Doctoral degree program, applicants should possess a Bachelor’s degree with First Class Honours, Division 1, and experience in research or a research Master’s degree from UTS, or equivalent.

The PhD applicant’s proposed area of research should be within one of the disciplinary and supervisory areas of the Faculty. Applicants are advised to discuss in detail their proposals with the Associate Dean, Research, Graduate and Industry Programs or nominee.

In submitting an application, applicants should include an outline of their research proposal, detailing the aims, objectives, methodology and required resources/facilities.

During the period of enrolment, candidates are supervised by appropriate academic staff members appointed by the Faculty. Candidates are required to present papers on their thesis topic at Faculty postgraduate seminars annually. Candidates are also invited to participate in other research activities occurring in the Faculty.

**Doctor of Architecture**
- **Course code**: AA54
- **Testamur title**: Doctor of Architecture
- **Abbreviation**: DArch
- **Course fee**: tba (local) $7,000 per semester (international)

The Doctor of Architecture program is intended to enable architects whose work is made public by construction, rather than in print, to receive academic recognition for their work when substantiated by a theoretical discourse at a doctoral level.

Further information on the requirements for admission, registration and assessment can be obtained from the Faculty Office.
Master of Architecture (by thesis)
- Course code: AA51
- Testamur title: Master of Architecture
- Abbreviation: MArch
- Course fee: tba (local)
  $7,000 per semester (international)

Master of Applied Science (by thesis)
- Course code: AB51
- Testamur title: Master of Applied Science
- Abbreviation: MAppSc
- Course fee: tba (local)
  $7,000 per semester (international)

Master of Design (by thesis)
- Course code: D058
- Testamur title: Master of Design
- Abbreviation: MDesign
- Course fee: tba (local)
  $7,000 per semester (international)

A limited number of places are offered each year to suitably qualified students to follow a program of study leading to one of the above awards. These degrees are for graduates seeking to extend and deepen their knowledge by undertaking an appropriate research investigation under professional supervision by academic staff of the Faculty.

To qualify for admission to a Master’s degree (by thesis) program, applicants should possess a Bachelor’s degree, preferably at Honours level or equivalent, and be proficient in English.

The requirement of the degree is the preparation of a thesis which is judged by its examiners to be a distinct contribution to the knowledge of the subject. The format of the body of work and the length of the written dissertation will be determined after discussion within Faculty staff and must be approved by the Graduate Studies Committee.

Candidates may be required in the first instance to undertake coursework subjects in research methodology, to gain exposure to and experience with research methods and skills. They are required to present papers, which form part of the preparation of their thesis, at the Faculty Postgraduate Seminars.

The minimum duration for a Master’s degree (by thesis) is two years full time or three years part time.

General
Applicants for all of the above courses are advised to consult the UTS Calendar for details relating to eligibility for admission, submission of thesis etc. Information may also be obtained from the University Graduate School.

Prospective applicants should discuss possible topics of research with the Associate Dean, Research and Graduate Programs (or nominee).
SUBJECT DESCRIPTIONS

11911
Architectural Design 1
17cp
Undergraduate

The subject Architectural Design is devoted both to the study of design, as an intellectual/academic discipline, and to the practice of designing, as a professional/practical discipline. In each year of the program, key issues are addressed both through formal lectures and by means of practical project-based programs which seek to integrate with design practice the intellectual/academic work from other subject areas within the course. This integration of design and technology with theory studies is the primary objective of the subject Architectural Design and is accomplished through work on project-based design programs. Such programs vary in size and content, from individual, specifically focused, exercises to more ‘complete’ projects, and are calibrated for increased complexity and difficulty throughout the course. In all stages of the design program there is a determination to demonstrate the relevance of linking theoretical studies and applied knowledge in critical assessments.

While the mode of delivery for the above is through project-based design exercises and projects, the traditional model of the studio – as the central or ‘core’ activity of architectural education, as a simulation of architectural practice, and as a locus of individual tuition based on the master/pupil model – can no longer be maintained. Rather, project-based exercises will be structured around interactive small group tutorial sessions involving approximately 15 to 20 students, under the direction of a variety of tutors, and with the specific subject content of each project being introduced by a series of lectures and papers. All design projects will be timetabled to show how this method of delivery is to operate; to emphasise the integration of specific content from other subject areas within the program; and to offer specific requirements and criteria for successful fulfilment of the program. In addition, the use of computer models as specific design aids will be stressed.

Components

Projects 1, Weighting: 0.6
Introduction to the concept of design as an activity which is fundamental to the making of habitable space. This involves developing an elementary understanding of the role of enclosed spaces, climate and materials in providing shelter, from the scale required by the individual to that of the group.

Architectural Computing 1, Weighting: 0.2
The use of the computer is studied as a tool to aid communication in all spheres of design. This component covers the following topics: basic CAD 2D, word processing and spreadsheet; application of Archi-CAD and 3D modelling; application of specific programs as design aids and tools of analysis; introduction to basic environmental modelling.

Architectural Graphics, Weighting: 0.1
This component is an introduction to the following: freehand drawing and graphic techniques; architectural drafting; projections and perspective; computer graphics.

Architectural Model Making, Weighting: 0.1
This component introduces students to elementary physical model making to show the construction and assemblage of buildings. Students will make models of landscape and buildings in their setting.

Note: In order that students may be certified to use the Faculty Workshop facilities, all Year 1 students will be required to undertake a training course of approximately 10 hours’ duration, under the direction of the Workshop Manager.

11912
Technology 1
13cp
Undergraduate

Central to an understanding of architecture and its technology is an appreciation of the relationship of construction to structure and to the technical servicing of buildings. This understanding is developed through the subject by integrating the study of construction, structure and services with project-based
design exercises, where these components are taught concurrently with design programs, allowing students at all stages of their development to test their designs against the reality of the constraints of technology.

**Components**

**Construction 1, Weighting: 0.5**

This component is an introduction to the constructional determinants of design. This is studied by an analysis of precedent which includes analyses of constructional systems and the ordering of building typologies. Statutory regulations and building codes are studied and case studies of small-scale, short-span, single-cell buildings are made.

**Structure 1, Weighting: 0.4**

The practice of architecture necessitates the production of stable buildings. The study of structure is intended to sharpen the predictive ability of building designers in this respect. Students are expected to demonstrate numeracy in their ability to compare systems quantitatively, undertake indicative computer analyses, and to manipulate physical units of force, length and time.

It introduces students to the following: forces acting on buildings – gravity, wind, seismic, temperature, ground movement; resolution of forces; the classification of material properties – stress, strain, elasticity, ductility, strength; cross-sectional properties; introduction to bending moment and shear force plots; simple 2D structures – columns, beams, arches and cables; structographics; consequences of variation in load pattern and jointing details; and introduction to computer usage in all the above.

**Architectural Surveying, Weighting: 0.1**

This component is an introduction to the following topics pertaining to architectural surveying: terminology used; role of service performed and scope of work undertaken by either consultants or others; instruments and equipment used; field work applied to site surveys and measurement of existing buildings, including measured drawings; plotting of services, contours and other site characteristics; recording of site conditions; and locating boundaries and ownership limits through land records.

---

**11913**

**Theory Studies 1**

9cp

Undergraduate

**Components**

**Environmental Science 1, Weighting: 0.3**

This component will deal with issues related to the placement of the built environment in the general context of its surrounding environment from a climatological viewpoint. It covers the following topics: the earth’s orbit around the sun; the aphelion and the perihelion; tilt of the earth on its axis; effect of the above phenomena on net radiation received over the planet’s surface for various latitudes; sun’s declination and alternation of seasons; major world weather systems; sunshine and shade studies related to major climatic regions; and construction of solar charts.

**Theory and Architecture 1, Weighting: 0.5**

This component is intended to introduce students to the roles of thinking, reasoning and argument in the analysis of architecture. Lectures in Part 1 of the component provide introductory discussions on thinking and reasoning skills, common fallacies, problems and problem solving, creativity, criticism and ethics; while the lecture and tutorial program in Part 2 offers an introduction to key issues of contemporary critical theory. In addition, the component aims to provide students with close reading skills, library and research skills, and essay-writing techniques.

**History of Architecture 1, Weighting: 0.2**

The following will be offered in 2001. Students must undertake both topics.

**The Architecture of Antique Greece and Rome**

This topic will study: the development of the Classical Orders and of the theory of beauty in Greek architecture; the buildings of Athens, Delphi and Olympia; the Greek and Roman theatre; Roman domestic architecture; the emergence of Roman concrete as a major building material and as a medium for shaping space and volume; and Roman design theory and practice as reflected in the works of the Emperors Nero, Domitian, Trajan and Hadrian.

**The Architecture of Medieval Europe**

This topic will concern itself at first with the Early Christian and Byzantine architecture of Rome, Ravenna and Constantinople. Thereafter it will turn to the Romanesque and Gothic architecture of France, England, Germany, Spain and Italy.
The importance given to studies related to professional practice is reflected in how they are structured within the course. Students are introduced, from the first year of the course, to the relationship of the professions to society, and to the importance of academic study and research in assuring that this role is properly fulfilled.

Component

Architectural Practice 1, Weighting: 1.0
This component covers the principles of architectural practice and the law. Topics include the following: law and ethics; aspects of trade practice and business structure; master and servant relationships; and taxation.

Elective Studies 1

6cp
Undergraduate
Students choose two from the following components:

Components

Evolution of Human Settlement, 3cp
This component reviews the migration and settlement of modern humankind (Homo sapiens) across the various landmasses of the planet. It focuses on response to place, climate and available resources as well as the role of social structures and cultural mores. It includes case studies by climatic zones: Hot Arid, Hot Humid, Arctic, Temperate, and Mediterranean.

Life Drawing, 3cp
Details of component to be provided at time of enrolment.

Architecture/Technology/History, 3cp
A brief introduction to key ideas associated with the relation between architecture and technology throughout history.

Architectural Design 2

8cp; prerequisite(s): 11911 Architectural Design 1; 11912 Technology 1
Undergraduate
Component

Projects 2, Weighting: 1.0
This component encourages the development of design skills to meet the needs of more complex programs, including residential and related uses. This involves lectures and design exercises embracing social, environmental and technical issues in the grouping and assembling of buildings.

Technology 2

9cp; prerequisite(s): 11911 Architectural Design 1; 11912 Technology 1
Undergraduate
Components

Construction 2, Weighting: 0.6
This component involves the study of domestic scale building, which is also related to project-based design exercises. It covers the following topics: introduction to building economics; case studies of building failures; analysis of constructional systems; analysis of architectural detailing and its relationship to architectural design; integration of services and other technical and environmental constraints as they influence construction; and an introduction to post-occupancy evaluation.

Structure 2, Weighting: 0.4
This component is an introduction to code loadings and the effect of materials and codes on joint detailing. It covers the following topics: the study of stability of low-rise 3D structures to gravity, lateral and torsional actions; bending and shear stress distribution over element X-sections; consequences of hyperstatic systems; composite materials and systems; and the use of computer techniques in all the above.
11923
Theory Studies 2
9cp
Undergraduate
Components
Environmental Science 2, Weighting: 0.4
This component concerns itself with the direct relationship between the built object and its interaction with the environment in which it is placed. It will primarily concern itself with issues of biogeography and cover all major environmental cycles e.g. nitrogen, carbon, oxygen and hydrological cycles. This component will also cover the topics of greenhouse gases, ozone depletion and the ramifications of other anthropogenic inputs into the atmosphere and its likely effect on plant and animal life.

Theory and Architecture 2, Weighting: 0.3
This component is a continuation of previous work on architectural thinking. It introduces students to the architecture and theories of modernism and modernity.

History of Architecture 2, Weighting: 0.3
The following will be offered in 2001. Students must undertake both topics.

The Architecture of the Early Renaissance
The areas of study covered in this topic are as follows: early 15th-century Florence and the work of Filippo Brunelleschi; the writings and building projects of Leon Battista Alberti; the development of the urban palazzo in 15th-century Florence, Pienza and Urbino; Donato Bramante in Milan and Rome; Michelangelo in Florence and Rome; and the early 16th-century projects of Raphael and Giulio Romano.

High Renaissance and Baroque Architecture
Starting with the High Renaissance buildings of Ammanati, Vignola and Palladio, this topic will proceed to an analysis of Baroque architecture through the works of Maderno, Bernini, Borromini, Longhena, Guarini, Neumann, Zimmermann, and von Erlach.

11924
Professional Practice 2
Undergraduate
Component
Architectural Experience
An integral component of each of the programs offered is practical work experience which is acquired concurrently with academic study. Approved work experience is a precondition of the award of each of the degrees. All students must therefore undertake the component ‘Architectural Experience’ and must gain a specified amount of architectural experience prior to graduation.

Students must amass specified amounts of architectural experience by particular stages of the course in order to proceed through the course academically.

Such architectural experience is monitored through a non-academic credit-point system. Full details of the amount of experience to be gained and at what level will be issued to students by the Director of Professional Practice.

Students are required to record their practical experience in the log book of the Architects Accreditation Council of Australia (AACA) (which may be obtained from the RAIA) and all students must submit these log books and work experience sheets for inspection each year. Students who do not submit log books by the dates set down by the staff member responsible for Professional Practice will have a failure recorded in the subject.

Students who have gained the requisite number of non-academic architectural experience points, and have had this verified by the Director of Professional Practice, are no longer required to submit log books and are deemed to have satisfied the criteria for the component Architectural Practice.

Students who have been granted advanced academic standing may also be eligible for an allowance of points in respect of approved practical experience acquired prior to enrolment in the course.

11925
Elective Studies 2
6cp
Undergraduate
Students choose two from the following components:

Components
Sustainable Architecture 1, 3cp
This component covers the following topics: energy usage and its implications for climate change and the acidification of the atmosphere; the contribution of the greenhouse effect and the built environment to these phenomena; infrastructure planning and climate responsive architecture; and resource allocation.
Architectural Computing 2E, 3cp
This course explores building simulation in the design process. It trains the student to extend their use of the features of the software.
This course is designed for architects who already have previous computer design experience with Vectorworks. Students are expected to have access to a computer with Vectorworks Software 8.5 (Education version) to practice the skills learnt each week.
For this course, Vectorworks Software 8.5 (Education version) is run on Macintosh and Windows NT platforms. Students must have completed the Architectural Computing 1 component of 11911 Design.

Architectural Photography 1, 3cp
This component is an introduction to architectural photography, including techniques, form and meaning.

11931
Architectural Design 3
8cp; prerequisite(s): 11921 Architectural Design 2; 11922 Technology 2
Undergraduate Component:
Projects 3, Weighting: 1.0
This component explores the relationship of buildings to their setting, in both rural and urban contexts, together with the integration of social, environmental and technical services to support their use.

11932
Technology 3
5cp; prerequisite(s): 11921 Architectural Design 2; 11922 Technology 2
Undergraduate Component
Construction 3, Weighting: 1.0
This component involves an investigation of more complex and larger scale building systems and their construction. It includes detailed cost planning and budgetary control; evaluation of environmental impact studies and their impact on construction; and analysis of the integration of construction and services in medium-rise and multi-use structures.

11933
Theory Studies 3
9cp
Undergraduate Component
Environmental Science 3, Weighting: 0.4
This component follows on from the work done in 11923 Theory Studies 2: Environmental Science 2, by introducing the topic of energy exchange mechanisms within the built environment. The contribution made by sensible heat load from the occupants and equipment will be discussed, as will the role of the building envelope as an environmental modifier and filler.

Urban Studies 1, Weighting: 0.3
These studies focus on issues which deal with the making of the built environment from the level of the individual building and its setting to the structure and restructuring of cities. In Urban Studies 1, the field of study and the interrelationship of subject areas are outlined. An introductory overview is given on the historical development of cities, which ranges from the planned and utopian city, to the growth of the incremental city. Basic issues relating to landscape are examined – terrain evaluation; reading the landscape and discovering its underlying structure; vegetation; soil morphology; geology; hydrology. Students will gain an understanding of the implications of intervention in natural systems by built objects and the management and control of change.

History of Architecture 3, Weighting: 0.3
The following will be offered in 2001. Students must undertake both topics.

Architecture in Sydney 1885–1930
While defining the ideological framework within which architecture evolved in Sydney and its environs during the period in question, this topic will analyse representative buildings designed by J Horbury Hunt, Harry C Kent, G M Pitt, E Jefferson Jackson, John Sulman, George Sydney Jones, B J Waterhouse, Hardy Wilson, Leslie Wilkinson and Neville Hampson. Research method as applied to the survey and documentation of historical buildings will also be discussed.

Architecture in Europe, 1850–1914
This topic will orientate itself around the work of the following architects: Philip Webb, Richard Norman Shaw, M H Baillie Scott, C F A Voysey, Edwin Lutjens, Charles Rennie
Mackintosh, Victor Horta, Hector Guimard, Otto Wagner, Joseph Olbrich, and Josef Hoffmann. At the same time it will discuss the ideas and theories espoused by the Arts and Crafts movement in England, by the Art Nouveau school in Belgium and France, and by the Secessionist movement in Austria.

11934
Professional Practice 3
4cp
Undergraduate
Components
Architectural Practice 2, Weighting: 1.0
This component covers the following topics:
1. application of cost planning and elemental analysis, their use in design and documentation stages and the development of the final cost analysis in office management
2. time planning and scheduling and its application to building projects and operations.

Architectural Experience
An integral component of each of the programs offered is practical work experience which is acquired concurrently with academic study. Approved work experience is a precondition of the award of each of the degrees. All students must therefore undertake the component ‘Architectural Experience’ and must gain a specified amount of architectural experience prior to graduation.

Students must amass specified amounts of architectural experience by particular stages of the course in order to proceed through the course academically.

Such architectural experience is monitored through a non-academic credit-point system. Full details of the amount of experience to be gained and at what level will be issued to students by the Director of Professional Practice.

Students are required to record their practical experience in the log book of the Architects Accreditation Council of Australia (AACA) (which may be obtained from the RAIA) and all students must submit these log books and work experience sheets for inspection each year. Students who do not submit log books by the dates set down by the staff member responsible for Professional Practice will have a failure recorded in the subject.

Students who have gained the requisite number of non-academic architectural experience points, and have had this verified by the Director of Professional Practice, are no longer required to submit log books and are deemed to have satisfied the criteria for the component Architectural Practice.

Students who have been granted advanced academic standing may also be eligible for an allowance of points in respect of approved practical experience acquired prior to enrolment in the course.

11935
Elective Studies 3
6cp
Undergraduate
Students choose two from the following components:
 Components
Sustainable Architecture 2, 3cp
This component critically reviews the part the current economic paradigm plays in management decisions regarding human settlement and the built environment, and sets out to determine whether this model represents a true costing of the resources used in human-kind’s daily activities.

History of Architecture 3E, 3cp
The following will be offered in 2001. Students must undertake both topics.

Islamic Architecture, 690–1700
What is Islamic architecture? This is the question which this subject seeks to answer as it visits buildings designed for and by Muslims in Jerusalem, Damascus, Baghdad, Samarra, Cairo, Cordoba, Granada, Istanbul and Isfahan.

Architecture in the USA, 1874–1936
Discussion in this unit will revolve around three main themes: 'Shingle Style' architecture and its emergence in the 1870s; developments in the design and construction of high-rise buildings in Chicago during the 1880s and 1890s; and the work of Frank Lloyd Wright between 1893 and 1936.

Architectural Computing 3E, 3cp
This course explores the advantages of the building simulation in the design process. It trains the student to utilise the features of the software. This course is designed for architects who do not have previous computer design experience with Archicad. Students are
expected to have access to a computer with Archicad 6.5 (Education version) to practice the skills learnt each week.

This subject explores how to:
• prepare a graphic technology model
• manipulate the ‘virtual building’
• interrogate and communicate the final design.

For this course, Archicad Software 6.5 (Education version) is run on Windows NT platform.

Theory and Architecture 3A, 3cp
Theory, architecture, philosophy and their interrelations.

Theory and Architecture 3B, 3cp
An introduction to the rise of post-modernism; key ideas and theorists; antifoundationalism; architecture and post-modernism; postmodern space; post-modernism and the city.

11936
Honours Qualifying
6cp; prerequisite(s): successful completion of all subjects in Years 1 and 2
Undergraduate

Components
Research Methods, Weighting: 0.2
This component includes the following topics: an introduction to research methods; methodologies in different disciplines; statistics; library facilities; international databases; and an introduction to thesis preparation.

Preliminary Thesis Submission, Weighting: 0.8
This component involves the preparation, under the supervision of an approved staff member and on a topic agreed to by the Program Director, the supervisor, and student, of a substantial essay outlining and developing one aspect of the proposed thesis topic. This essay should demonstrate the following: research and scholarship skills applied to that particular topic; skills in data gathering and analysis; and the development and presentation of written skills suitable to the preparation of a thesis at Honours level.

11941
Architectural Design 4
10cp; prerequisite(s): 11931 Architectural Design 3; 11932 Technology 3
Undergraduate

Component
Projects 4, Weighting: 1.0
Problems related to the re-use and re-design of obsolete buildings are studied in this component, with account taken of historical and cultural factors, architectural significance, as well as constraints on built form and land use imposed by statute and local regulation.

11942
Technology 4
12cp; prerequisite(s): 11931 Architectural Design 3; 11932 Technology 3
Undergraduate

Components
Construction 4, Weighting: 0.4
This component involves the analysis of the integration of construction and services in high-rise and large-span structures. It covers advanced constructional systems, including studies of precast and prestressed concrete design; timber technology; large-span steel and cable structures; study of building and planning codes and relevant statutory instruments; detailed appraisal of the Burra Charter as it impacts on the rehabilitation of protected buildings; and technical adaptation of existing buildings to new use.

Structure 3, Weighting: 0.3
This component involves students in case studies on the following: building failures; typologies and shape finding; high-rise and long-span buildings; membranes, nets and space frames; wind and earthquake effects. It also covers retrofit in the upgrading of old and damaged buildings, and communication between CAD and computerised analysis.

Applied Services, Weighting: 0.3
This component investigates the management of the various information and control systems that contribute to the built environment’s efficient utilisation of resources and energy. It also covers all mechanical services, air distribution services, and hydraulic services, including professional liaison with appropriate consultants.
11943
Theory Studies 4
6cp
Undergraduate
Components
Environmental Science 4, Weighting: 0.6
This component is an introduction to architectural acoustics and lighting which looks at the response of the human ear and eye. The acoustic program covers the following topics: the characteristics of sound and its propagation; design for acoustic environments; noise control; barriers; isolation; masking and general room acoustics. The lighting program studies two aspects under the headings of daylighting and electrical lighting, including the following topics: glare; colour perception classification systems; daylighting factors; design skies; and lamp technologies. Methods of calculating illuminance will also be covered.

Urban Studies 2, Weighting: 0.4
This component includes seminal case studies of city development with a particular focus on the scale and growth of the 19th-century city. Studies include sociopolitical, economic, physical and ideological critiques of the city.

11944
Professional Practice 4
4cp
Undergraduate
Components
Architectural Practice 3, Weighting: 1.0
This component covers the Architects Act, Regulations and Professional Bodies, and Law and Management. It provides students with the following:
1. a background to statute and common law and the operative legal systems, together with the laws of torts, contracts and agency, in their implications to architectural practice
2. an introduction to management theory and the processes of forecasting, organising, planning, motivating, controlling, coordinating and communicating.
Architectural Experience
An integral component of each of the programs offered is practical work experience which is acquired concurrently with academic study. Approved work experience is a precondition of the award of each of the degrees. All students must therefore undertake the component 'Architectural Experience' and must gain a specified amount of architectural experience prior to graduation.
Students must amass specified amounts of architectural experience by particular stages of the course in order to proceed through the course academically.
Such architectural experience is monitored through a non-academic credit-point system. Full details of the amount of experience to be gained and at what level will be issued to students by the Director of Professional Practice.
Students are required to record their practical experience in the log book of the Architects Accreditation Council of Australia (AACA) which may be obtained from the RAIA) and all students must submit these log books and work experience sheets for inspection each year. Students who do not submit log books by the dates set down by the staff member responsible for Professional Practice will have a failure recorded in the subject.
Students who have gained the requisite number of non-academic architectural experience points, and have had this verified by the Director of Professional Practice, are no longer required to submit log books and are deemed to have satisfied the criteria for the component Architectural Practice.
Students who have been granted advanced academic standing may also be eligible for an allowance of points in respect of approved practical experience acquired prior to enrolment in the course.

11945
Honours Elective Thesis
24cp; prerequisite(s): successful completion of all subjects in Years 1, 2 and 3, including 11936 Honours Qualifying, at credit level
Undergraduate
This subject involves the preparation of a thesis (c. 20,000 words) under the supervision of an approved staff member and on a topic approved by the Program Director, the supervisor and the student. Topic choice will be conditional on adequate supervision in that area being available within the Architecture program, or elsewhere subject to the approval of the Architecture Program Director.
11946
Design Honours
6cp
Undergraduate
This is an additional coursework subject demonstrating design and technology skills at an advanced level.

11951
Architectural Design and Technology 1
17cp; prerequisite(s): BA in Architecture or equivalent
Undergraduate
In Years 5 and 6 of the course the importance given to architectural design and to the integration of design with technology remains paramount, with the two previous subject strands amalgamated into a single subject. Project-based exercises are developed to a greater level of complexity than in the previous years. Again, in all stages of the design program there is a determination to demonstrate the relevance of linking theoretical studies and applied knowledge in critical assessments.

Components
Projects 5, Weighting: 0.7
Studies in this component concentrate on two diverse areas of work. One focuses on the micro level of the individual building where a major public project, involving large-span technology and complex servicing, is selected to be designed in detail. The other involves a study of part of an urban area of a town or city, where the physical, economic and social infrastructure, as well as the built form of the place, has to be redesigned or modified to accommodate change.

Environmental Science 5, Weighting: 0.3
This component involves the specialist application of all prior learning in respect of environmental science, integrated with the Design and Technology component Projects 5.

11953
Theory Studies 5
10cp; prerequisite(s): BA in Architecture or equivalent
Undergraduate

Components
Theory and Architecture 4, Weighting: 0.5
In this component students must choose from a range of alternative seminars offered. In 2001, the following may be available, subject to staff availability:
1. Exploring Space 1: From Simple Beginnings to Baudrillard
2. Building, Dwelling, Thinking: Towards a Phenomenology of Place
3. The Future of the Office
4. Access Equity and Design
5. The Evolution of Technology
6. Fire in Atria.

Urban Studies 3, Weighting: 0.5
This component examines the phenomenon of the suburb and the role of 19th century philanthropists and social reformers in its development. The dynamics of social change, especially with reference to changing patterns of urbanism are also covered.

11954
Professional Practice 5
5cp
Undergraduate

Components
Architectural Practice 4, Weighting: 1.0
This component addresses marketing theory and practice as it relates to architectural practice. It focuses on the financial management of architectural practices and architectural projects including building contract cost control, with relevant operations research.

Architectural Experience
An integral component of each of the programs offered is practical work experience which is acquired concurrently with academic study. Approved work experience is a precondition of the award of each of the degrees. All students must therefore undertake the component 'Architectural Experience' and must gain a specified amount of architectural experience prior to graduation.

Students must amass specified amounts of architectural experience by particular stages of the course in order to proceed through the course academically.
Such architectural experience is monitored through a non-academic credit-point system. Full details of the amount of experience to be gained and at what level will be issued to students by the Director of Professional Practice.

Students are required to record their practical experience in the log book of the Architects Accreditation Council of Australia (AACA) (which may be obtained from the RAIA) and all students must submit these log books and work experience sheets for inspection each year. Students who do not submit log books by the dates set down by the staff member responsible for Professional Practice will have a failure recorded in the subject.

Students who have gained the requisite number of non-academic architectural experience points, and have had this verified by the Director of Professional Practice, are no longer required to submit log books and are deemed to have satisfied the criteria for the component Architectural Practice.

Students who have been granted advanced academic standing may also be eligible for an allowance of points in respect of approved practical experience acquired prior to enrolment in the course.

11956

Master's Research Elective

32cp; normally 8hpw over two years;
prerequisite(s): BA (Honours) in Architecture or equivalent
Undergraduate

The Master's Research Elective is offered in Years 5 and 6 of the course. Candidates for the degree of Master of Architecture must complete this program in addition to all the subjects required for the award of the Bachelor of Architecture degree.

The Master’s Research Elective subject is valued at 16 credit points per year over two years. The subject is divided into two components:

1. a theory component (Master’s Research Elective – Theory) involving the preparation of a written dissertation
2. an applied component (Master’s Research Elective – Application 1 and 2) involving the demonstration by projects of an advanced level of architectural and urban design and technology. This component involves two distinct programs of work, as outlined below.

Students choosing to undertake the Master's Research Elective component after completion of all subjects required for the Bachelor of Architecture degree, must do so over a single year and thus must take both the above Applied programs simultaneously.

Components

Master's Research Elective – Application 1
Weighting: 0.2; 3hpw; Year 5; Semesters 1 and 2
This component involves studies in restructing the city and the remodelling of its infrastructure, both physical and non-physical. It includes case studies at the micro level of the individual building to demonstrate principles of this procedure in practice with studio-based projects to confirm its application.

Master's Research Elective – Application 2
Weighting: 0.2; 3hpw; Year 6; Semesters 1 and 2
In this component students undertake design projects to demonstrate an ability to synthesise all aspects of the design process in creating or re-adapting major buildings, and locate them or reconnect them into new or existing physical settings.

Master's Research Elective – Theory
Weighting: 0.6; 8hpw; Years 5 and 6; Semesters 1 and 2
This component involves the preparation of a written dissertation (c. 30,000 words) under the supervision of an approved staff member and on a topic agreed to by the Director of Dissertations and the candidate.

11961

Architectural Design and Technology 2

17cp; prerequisite(s): 11951 Architectural Design and Technology 1
Undergraduate

Components

Projects 6, Weighting: 0.7
This component requires the development and presentation of designs embodying all aspects of the design process which, in their synthesis, take account of socioeconomic, cultural and physical determinants.

Environmental Science 6, Weighting: 0.3
This component involves the specialist application of all prior learning in respect of environmental science, integrated with the Design and Technology 2 component Projects 6.
Subject descriptions

11963
Theory Studies 6
10cp
Undergraduate

Components
Theory and Architecture 5, Weighting: 0.5
In this component students must choose from a range of alternative seminar programs offered. In 2001 the following may be available, subject to staff availability:
1. Exploring Space 2: Cyberspace, Politics, Power
2. Body, Gender, Space
3. The Future of the Office
4. Access Equity and Design
5. The Evolution of Technology
6. Fire in Atria.

Urban Studies 4, Weighting: 0.5
This component examines the following topics:
regional and urban planning issues in their social context and governmental framework; planning procedures and current ideologies in planning; and infrastructural decision making in the context of city restructuring.

11964
Professional Practice 6
5cp
Undergraduate

Components
Architectural Practice 5, Weighting: 1.0
This component involves the study of building contracts. It covers the following topics:
seminars on the legal base of the provisions of building contracts; comparisons between forms of contracts in current usage and their administration with case studies of practice situations; and role playing, dispute resolution and negotiation skills.

Architectural Experience
An integral component of each of the programs offered is practical work experience which is acquired concurrently with academic study. Approved work experience is a precondition of the award of each of the degrees. All students must therefore undertake the component ‘Architectural Experience’ and must gain a specified amount of architectural experience prior to graduation.

Students must amass specified amounts of architectural experience by particular stages of the course in order to proceed through the course academically.

Such architectural experience is monitored through a non-academic credit-point system. Full details of the amount of experience to be gained and at what level will be issued to students by the Director of Professional Practice.

Students are required to record their practical experience in the log book of the Architects Accreditation Council of Australia (AACA) (which may be obtained from the RAIA) and all students must submit these log books and work experience sheets for inspection each year. Students who do not submit log books by the dates set down by the staff member responsible for Professional Practice will have a failure recorded in the subject.

Students who have gained the requisite number of non-academic architectural experience points, and have had this verified by the Director of Professional Practice, are no longer required to submit log books and are deemed to have satisfied the criteria for the component Architectural Practice.

Students who have been granted advanced academic standing may also be eligible for an allowance of points in respect of approved practical experience acquired prior to enrolment in the course.

12115
Building Science and Environmental Factors
4cp
Postgraduate

This subject examines the theory of building environmental performance and applies the theory to issues of building occupancy and public health and safety.

12170
Building Assessment
6cp
Postgraduate

This subject covers building services, maintenance, technological change, diagnostic, security systems and assessment practice.

12511
Building Technology and Regulation
6cp
Postgraduate

In this subject students undertake a critical examination of building structure, cladding and service systems for a range of building types. The subject covers the following topics: maintenance, life cycle costing and energy
efficiency; purpose and application of building regulations; and interpretation of building documentation in the context of property development and management processes.

12515
Property Life Cycle
6cp
Postgraduate
A strategic and responsible approach to management of property assets requires the ability to understand and respond to economic and social influences which affect the performance of property through a life cycle which begins with raw land and includes development, management and redevelopment. Marketing and effective property management techniques are examined in this subject as responses to changing economic and social forces in the strategic management of property assets.

12518
Property Transactions
6cp
Postgraduate
This subject looks at the following topics: the nature of the ownership of personal property including intellectual property; the nature of ownership of real property including the related concepts of title, leases, mortgages and conveyancing transactions, options to purchase; an overview of the law of contract with emphasis on construction industry contracts and joint venture agreements; the law of negligence including liability for negligently given advice or certification, the operation of the statute of limitations; and the manner in which local government building, planning and subdivision approvals are given including the mechanisms for appeal to the Land and Environment Court.

12524
Property Development
4cp
Postgraduate
This subject provides a framework, tools, techniques and practical approaches for individuals and organisations involved in property development. Material covered will include the following: strategic planning; introduction to project management of property developments; team formation; development and management; project initiation, planning, procurement and completion; the property development process; organisational structure and culture; human resource management; industrial relations; and characteristics and needs of different property development types.

125240
Property Development (Extended)
6cp
Postgraduate
This subject provides a framework, tools, techniques and practical approaches for individuals and organisations involved in property development. Material covered will include strategic planning; introduction to project management of property developments; team formation, development and management; project initiation, planning, procurement and completion; the property development process; organisational structure and culture; human resource management; industrial relations; characteristics and needs of different property development types. This subject comprises the lecture/seminar material as for 12524 Property Development (4cp) with the addition of a further item of assessment related to the objectives of the subject to be negotiated to address specific interests of the student.

12525
Property Analysis 1
6cp
Postgraduate
In this subject students study the following: general accounting principles; capital budgeting techniques; discounted cash-flow analysis; risk analysis techniques; interest rate theory and discount rates; traditional and contemporary principles and methods of valuation, advanced capitalisation and other valuation methods; valuation of different classes of property; and sources of finance. A basic knowledge of a spreadsheet program such as Microsoft Excel is assumed. Students will need to bring a financial calculator to class.

12535
Property Analysis 2
6cp
Postgraduate
This subject covers the following topics: site identification and analysis; financial feasibility analysis for both residential and nonresidential properties; estimation of development feasibility components; sensitivity and risk analysis; preparation of development business
plans and finance proposals; investment market and portfolio analysis; property investment portfolio management including impact of economic size, market constraints, physical constraints, maintenance of market position, reappraisal and culling; risk exposure, profiles, gearing and management; current issues in property and non-property asset investment; and the use of basic computer applications.

12550
UEM Project
6cp
Postgraduate
This subject involves an independent study in an area related to Urban Estate Management, selected by the student, subject to approval of the Director of Program.

16001
Preparatory Studies
8cp
Undergraduate
This subject helps students to develop professional communication, management and computing skills. It covers basic research methodologies including library skills, information gathering, dissemination and analysis, written communication skills, incorporating formal correspondence, essay/report writing and English expression. It also focuses on verbal communication and client presentation skills, marketing principles, strategies and techniques or survey methods.

16010
Construction Project 1
8cp
Undergraduate
Introduction to the basis of the program i.e. that construction is a process (or series of processes), which needs to be managed if building projects are to be successfully completed in terms of time, cost scope, and quality. The course provides an overview of the functions of management with an introduction to time, quality and cost management. Project case studies in this initial stage will relate to simple sheds and single storey domestic construction. There is an introduction to some of the most common building trades.

16011
Facility Management
8cp
Postgraduate

16012
Project Management
8cp
Postgraduate
An introduction to the professional discipline of project management. Project management processes and context. Project integration, scope, time, cost, quality, human resource, communications, risk and procurement management. Case studies. The subject is delivered over the Internet in conjunction with Massey University in New Zealand.

16013
Expert Witness
8cp
Postgraduate
The purpose and role of an expert witness. The context within which expert testimony is delivered. Rules of evidence and natural justice. Examination and cross-examination. The law relating to consultants in the construction industry. Researching evidence and presentation at a simulated tribunal hearing. The subject is delivered over the Internet in conjunction with Massey University in New Zealand.

16020
Construction Project 2
8cp
Undergraduate
Management of the process is further advanced with the issue of materials handling formally addressed along with the management of safety. Negotiation is introduced. Time, cost, scope and quality management are further developed. Project case studies relating to multi-residential and industrial buildings are utilised in this subject. The analysis of relevant trades continues.
16030
Construction Project 3
8cp
Undergraduate
The management of the building process concentrating on the physical sequencing and assembly of multi-storey or large construction. Emphasis is on the evaluation of techniques and technology of construction as linked to the human resource management issue. Multi-storey construction is examined in the case studies. The remaining trades are examined.

16040
Construction Project 4
8cp
Undergraduate
Management of the construction process in the services, refurbishment and multi-building environments. This subject brings together much of the work developed in the earlier subjects but in new areas and at a more advanced level. The project case study will concentrate on the physical sequencing and assembly of services, of refurbishment/recycling of obsolete buildings and of the commissioning and maintenance of buildings.

16050
Building Assessment Techniques
4cp
Undergraduate
The subject will be aimed at providing the student with the skills necessary to assess the technical condition of new and existing buildings and methods appropriate to each of the various building components (including services) will be covered. The assessment of the technical condition of existing buildings and the impact of that condition on possible future use of the building. Detailed knowledge of the construction methods used in the past and the likely deterioration with time that would be expected of the building elements.

16051
History of Building Construction Methods
4cp
Undergraduate
The subject is aimed at giving students an appreciation of the worth of old buildings. It will cover the history of building construction methods through the ages.

16052
Water Around Buildings
4cp
Undergraduate
This subject examines many aspects of water as it affects finished buildings. These aspects are: disposal of unwanted water, and the diagnosis and remediation of dampness problems.

16053
Mentoring and Professional Development
4cp
Undergraduate
Develops mentoring and human communication skills which are vital in professional life. Emphasis is on developing leadership skills as responsibility is placed on the mentors (final year students) to interact with their allocated students. The course aims to develop supervisory and management skills, training skills, and offers a controlled situation where the necessity for good communication skills can be learnt at first hand. This subject aims to address issues of first year students through input from final year students.

16054
Natural Disasters and Risk Assessment
4cp
Undergraduate
The subject will be aimed at providing the student with the skills necessary to understand the level of risk associated with new and existing buildings. Students will be taught the basic mechanisms responsible for causing natural disasters and how to statistically assess their likelihood of occurrence. Natural hazards and their management will be examined together with risk assessment techniques and regimes, quantitative methods, risk reduction and management.

16055
Sustainable Building Technologies
4cp
Undergraduate
The subject will be aimed at providing the student with the skills necessary to evaluate the embodied energy and energy efficiency of existing construction methods as well as introducing alternative and more energy efficient methods. It will also cover the issues surrounding recycling of building materials.
16056
Building Control and Regulations
4cp
Undergraduate
This subject will provide undergraduate students with an understanding of the New South Wales building control system and the technical requirements of the Building Code of Australia.
It will also provide students with sufficient knowledge for them to be able to review proposed building designs with respect to the fundamental requirements of the Building Code of Australia.

16057
The Evolution of Technology 1
4cp
Undergraduate
An exploration of the history of technology will be the focus of this subject and the role of invention and design innovation in the process of economic growth and social development. An introduction to chaos theory and complexity and the evolution of technology will bring together two of the most potent forces in our history for exploration and analysis. The semester evaluates technology in the modern context of the sciences of complexity. The dialectic between technology and evolution is considered, as we gain evolutionary responsibility on the one hand and technological tools for this task on the other.

16058
The Evolution of Technology 2
4cp
Undergraduate
This subject will be based on an examination of a series of case studies of major technologies and their effect on economic growth and social development. There is particular emphasis on the role of ‘growth poles’ and competition, both in innovation and in the dissemination and adoption of new ideas, memes, materials, tools, methods and systems. The effects of technological change on the environment, the structure of the global economy and patterns of employment are considered. The rapid growth of communications and information technology is investigated in the context of employment, democracy and privacy issues. The potential impact on specific industries and their related professions over the next two decades is considered by constructing probable scenarios and use of foresighting techniques.

16059
International Construction
4cp
Undergraduate
International construction aims to introduce students to construction industry structure, practices and methods of construction adopted in various parts of the world. The subject will cover current practices and future trends in various countries. International approaches to construction procurement, management practices and construction resource availability, requirement and usage. The impact of local economic, labour and technical parameters on construction management. Staffing for international projects. Areas of competitive advantage in international construction.

16111
Construction 1
8cp
Undergraduate
This subject covers residential construction for single occupancy. Topics covered include: terminology and detail design of typical residential buildings; footings, floor, wall and roof framing, cladding, windows and doors, finishes and joinery; building regulations; interpreting architectural drawings and sketching construction details; model making; concurrent practical studies and field work.

16112
Construction 2
8cp; prerequisite(s): 16111 Construction 1
Undergraduate
This subject looks at residential construction for multiple occupancy and is centred on terminology and detail design of typical attached housing, including: duplex, villa, townhouse, cluster housing and walk up flats. Topics will include: footings, floor, wall and roof framing, cladding, windows and doors, finishes and joinery; interpreting architectural drawings and sketching construction details; building regulations; model making; industrial construction; terminology and detail design of typical industrial buildings; as well as concurrent practical studies and field work.
16113
Construction 3
8cp; prerequisite(s): 16112 Construction 2
Undergraduate
The focus of this subject will be multi-storey commercial construction. Detailed attention will be given to: footings, sub-surface drainage systems, basement construction, load-bearing wall systems, concrete framed buildings and steel framed buildings for multi-storey construction; transportation and placement of concrete; prestressed and post-tensioned concrete; prefabricated construction; scaffolding; building regulations together with concurrent practical studies and field work.

16114
Construction 4
8cp; prerequisite(s): 16113 Construction 3
Undergraduate
This subject continues the analysis of multi-storey commercial construction. Topics include: shoring, formwork, stair and ramp construction; curtain walling, built-up roofing systems, doors and frames, partitions, suspended ceilings and finishes; construction techniques and equipment used for temporary works, site preparation and demolition; earthmoving and soil compaction equipment, compressed air services, piling systems and associated plant, dewatering, blasting equipment and landscaping; refurbishment and restoration of buildings, building and fire safety regulations and requirements; occupational health and safety; as well as concurrent practical studies and field work.

16115
Construction 1
8cp
Undergraduate
Construction technology for residential buildings. Terminology and detail design of typical construction solutions. Footings, floor, wall and roof framing, cladding, windows and doors, finishes and joinery. Weatherproofing. Building regulations and standards, including fire safety. Model building. Concurrent practical studies and field work.

16116
Construction 2
8cp; prerequisite(s): 16115 Construction 1
Undergraduate

16117
Construction 3
8cp; prerequisite(s): 16116 Construction 2
Undergraduate

16118
Construction 4
8cp; prerequisite(s): 16117 Construction 3
Undergraduate

16131
Professional Practice
4cp
Undergraduate
This course will cover the history and definition of professionalism, the organisation of professions in the building field, responsibilities of consultant to client, third party and community, conditions of engagement and indemnity insurance.
16150
Land Studies 1
8cp
Undergraduate
This subject looks at the history, political economy and sociology of real property, investment, and land administration; ethical fundamentals for the analysis of land investment and professional practice, and an introduction to logical analysis and presentation skills necessary for academic development.

16152
Land Studies 2
4cp
Undergraduate
This subject looks at the physical aspects of land definition, including land information, title, subdivision and measurement technology. It gives students an overview of the various types of land and engineering surveys and plans. It also covers the following topics: the applications of land surveying in land economics; finance and investment issues and techniques associated with real estate assets; and the use of debt finance for real estate investment.

16153
Building Technology
6cp
Undergraduate
In this subject students learn about the technology of components and elements of domestic, commercial and industrial buildings, both low and high rise. This covers the following topics: structures; facades; partitions; services; relevance of ordinances; and aspects of refurbishing.

16155
Facility Evaluation
4cp
Undergraduate
The objective of this subject is to assess the effects of aspects of the design of buildings on user comfort, energy usage, aesthetics and safety. It covers orientation, use of materials, layout, services, ageing of buildings, and relationships of buildings to structures.

16161
Statistics
8cp
Undergraduate
The study and use of statistical tools appropriate to construction economics. Data collection and presentation, descriptive statistics, graphical techniques, probability and distribution, index numbers, statistical inference, time series, correlation and regression analysis. Computer-aided instruction and software applications.

16163
Appraisal and Statistics
8cp
Undergraduate
The use of mathematical, statistical and computing techniques in financial applications and computer applications for Land Economics are studied in this subject.

16198
Building Experience (P/T)
Undergraduate

16201
Drawing and Surveying 1
4cp
Undergraduate
Detailed examination will be given to the following topics: drafting and graphic skills including lettering, plane and solid geometry and projections; use of drawing to solve detailing problems; selection of scales and mode of presentation to communicate; use of drawings in the building process; architectural floor plans, reconciliation of dimensions, the meaning of lines, building terms, use of references; the process of setting out works; extractions of information from surveying drawings, levels, contours; the choice of setting out techniques; the use of tape, level, theodolite and optical plummets; the NSW land title systems and the powers of public authorities.

16202
Drawing and Surveying 2
6cp; prerequisite(s): 16201 Drawing and Surveying 1
Undergraduate
Topics covered will include the further use of drawing/s in the building industry context as a means of communication; introduction to the
use of Computer-Aided Design (CAD) and its uses in the construction discipline; the application of practical building setting out, checking and levelling techniques; and field work involving the use of building surveying equipment.

16211
Computations, Mathematics and Statistics
6cp
Undergraduate
The mathematics and statistics components of the subject are intended to assist exploration and application of functions and graphs, differentiation and integration. Other topics which will be taken up are: an introduction to matrix algebra; chance and probability, permutations and combinations; presentation of data; average and means, central tendency; scatter, standard deviation, variance; distribution: binomial, Poisson, normal, confidence; correlation and regression; application of statistical methods of quality management; statistics, operations research techniques and process capabilities. The computing component of the subject is intended to develop the students' basic knowledge of computing and an awareness of industry specific software. It is structured to allow them to further develop these skills through the solving of suitable problems.

16221
Project
12cp
Undergraduate
This project will involve the detailed investigation of a topic by literature search, laboratory experiment or survey and the production of a large report to a professional standard.

16224
QS Project
12cp: alternative to 16506 Quantity Surveying Practice (8cp) and Unspecified Elective (4cp)
Undergraduate
This subject requires students to prepare and submit a major project, involving the detailed study of an individual topic related to the field of construction economics.

16225
QS Project (Summer)
12cp; (one semester): part of the Semester Bridge (Summer term)
Undergraduate
This subject requires students to prepare and submit a major project, involving the detailed study of an individual topic related to the field of construction economics. The subject has a distance learning component which prepares students prior to formal commencement.

16300
Industry Studies (Undergraduate)
12cp
Undergraduate
This subject involves the analysis of project case studies collected in-country. Ten projects of similar type are examined critically and quantitatively using statistical tools as appropriate. Construction performance is assessed by comparison of these projects with those collected by other students. The subject culminates in a group presentation that aims to highlight international best practice and the significance of different industry cultures.

16301
Services 1
6cp
Undergraduate
An introduction to electrical, air conditioning, vertical transportation and fire protection services and systems, this subject covers terminology, design and construction requirements.
16302
Services 2
4cp; prerequisite(s): 16301 Services 1
Undergraduate
This subject will include: an introduction to hydraulic, security services and systems, intelligent buildings and an in-depth study on coordination, integration, installation and inspection of services, safety and access requirements.

16310
Engineering Services
8cp
Undergraduate
This subject is an introduction to hydraulic, electrical, airconditioning, vertical transportation and fire protection services and systems. It includes the study of the following: computer networks, security systems and monitoring technologies; terminology, design, coordination and construction requirements; the cost implications of engineering services; and intelligent buildings.

16351
Introduction to Valuation
6cp
Undergraduate
This subject is an introduction to the valuation profession, its role and function within the real property industry. Basic methodology and technical tools of the valuer will also be studied.

16352
Valuation Methodology
8cp
Undergraduate
This subject is an in-depth study of the role, functions and obligations of the valuation profession. Areas studied include the following: methods of valuation; time value of money; measures of rates of return; resumption and acquisition values; the use of statistical analyses in valuation practice. Practical studies and field work are included as part of the requirements for this subject. Part-time students may be exempted from this practical studies component.

16353
Advanced Valuation Methods
8cp
Undergraduate
This subject is designed to provide an extensive and in-depth knowledge of real estate feasibility studies for development and investment projects. Practical studies and field work are included as part of the requirement for this subject.

16354
Rural Valuation
6cp
Undergraduate
This subject is an in-depth study of the purpose and methodology of valuing non-urban and rural properties, and an introduction to the importance of agriculture in the Australian economy. Practical studies and field work are included as part of the requirements for this subject.

16355
Specialised Valuation Topics
8cp
Undergraduate
This subject is an in-depth study of the more specialised areas in the valuation profession. Capitalisation, summation and replacement cost approaches are developed, and practical studies and field work are included as part of the requirements for this subject.

16356
Statutory Valuation and Litigation
4cp
Undergraduate
Valuation case law is discussed in this subject. Expert witness testimony and specialist report writing are covered with particular reference to professional negligence.

16361
Real Estate 1
6cp
Undergraduate
This subject is an introduction to the real estate industry examining the statutory controls and professional ethics and applying them to agency practice. The role and responsibilities of the real estate agent will be examined including marketing, selling of real estate and residential property management.
16407
Building Communications
6cp
Undergraduate
Develops human communication skills and promotes understanding of the communication process. Emphasis is on business writing and effective speech communication. Intensive writing practice will be related to communication principles. Teaching will be by lectures for communication principles and in small group workshops for writing and oral communication. Introduction to the applied skills of plan reading, building specifications, report writing, computer word processing, information technology systems etc.

16411
Contract Administration
8cp; prerequisite(s): 16805 Legal Studies 1
Undergraduate
The principles and practice involved in the administration of construction contracts, including preparation of variations, progress claims, activity reports, cash flows and package-deal documentation are covered in this subject. Students look at the following: rise and fall provisions; general conditions of contract; specification writing; cost control of projects during construction; quality assurance; conflict management and dispute resolution; and an introduction to project management.

16452
Land Studies 3
6cp
Undergraduate
This subject examines the relevance of organisation theory to real estate, valuation and property departments; contributions of various theorists; technology, motivation, group behaviour, structure, goals; analysis of various organisational forms; definition of responsibilities of consultant to client, third party and community; conditions of engagement; indemnity insurance; the marketing process and its application to real estate; and the auction method of selling and the role of the auctioneer.

16453
Development Management
4cp
Undergraduate
This subject focuses on aspects of the management of projects under development or undergoing major maintenance. Topics include the following: client needs determination; procurement methods; design management including cost planning and buildability; approvals management; development of maintenance standards for and estimate of live components of buildings; maintenance budgets; assessing the effects of design on maintenance; and recording operating cycles of plant equipment.

16454
Investment and Portfolio Management
4cp
Undergraduate
This subject is an in-depth study of the methods and techniques of investment and portfolio management. It looks at the asset allocation process and risk and return with an introduction to the techniques of investment and portfolio analysis.

16456
Real Estate 2
8cp
Undergraduate
This subject focuses on the management of large complex properties, the study of strata management and the role of the strata manager. Topics covered include development and administration of systems for market research, rent collection, tenancy management, investment taxation and negotiation.

16501
Quantity Surveying 1
8cp
Undergraduate
This subject is an introduction to quantity surveying services and methods and covers the measurement and calculation of simple quantities in accordance with the current Australian Standard Method of Measurement. Students learn the principles of measurement, set-out and notation, and carry out measurement exercises. Professional development and the role of professional associations is also discussed.
16502
Quantity Surveying 2
8cp; prerequisite(s): 16501 Quantity Surveying 1
Undergraduate
This subject looks at the application of information technology and information exchange to the quantity surveyor. It also covers the following topics: future trends and the impact of computers on traditional roles; the investigation and use of specialist software and equipment for the measurement and presentation of quantities; measurement exercises involving superficial areas of construction elements as an introduction to cost planning; computer-aided design; and the automatic production of quantities.

16503
Quantity Surveying 3
8cp; prerequisite(s): 16502 Quantity Surveying 2
Undergraduate
This subject teaches students about the preparation and uses of a bill of quantities and types of documentation formats in common use. They will acquire competence in preparing trade packages within a bill of quantities in accordance with the current Australian Standard Method of Measurement. The subject also covers the following topics: measurement rules and procedures; the measurement of engineering services, such as hydraulics, electrical, mechanical and fire protection systems; and alternative methods of measurement.

16506
Quantity Surveying Practice
8cp
Undergraduate
This subject is a critical examination of the quantity surveying profession and its future. It covers the following topics: professional practice, ethics and codes of conduct; professional liability and indemnity; taxation law and depreciation; setting up and running a professional practice; organisational theory and management; industrial relations; international construction and opportunities; and topical issues affecting the profession and the industry.

16513
Economic Analysis
8cp
Undergraduate
The application of industrial economics to the building and construction industry, using the structure-conduct-performance approach. The measurement of performance at the industry and project level. Forecasting techniques and the relationship between business and building cycles. Analysis of the linkage of the building and property industries. The process of structural change and the emergence of the international building and construction industry. The impacts of information and communications technology on the industry and the role of innovation in the construction process. Strategic planning for business.

16515
Building Company Performance
6cp
Undergraduate
The objective of this subject will be to provide students with a thorough understanding of the financial operations of companies and the factors which affect their financial performance.

16516
Development Appraisal
4cp
Undergraduate
The objective of this subject is to acquaint students with the economic and political framework within which developers have to operate and to provide them with the necessary technical tools to carry out a full feasibility study of a development proposal, with a strong emphasis being placed on environmental considerations. Public sector projects will also be considered.

16521
Cost Planning and Modelling
8cp; prerequisite(s): 16502 Quantity Surveying 2
Undergraduate
In this subject students undertake an examination of the principles and practices of construction economics, including budgeting, design optimisation, preliminary estimating, cost planning and elemental cost analysis. They also look at the following: building price indices; international classification standards
and practice; estimating the cost of engineering services; computerised cost modelling techniques; and computer applications.

16522
Economic Development
8cp
Undergraduate
An introduction to the structure and performance of the Australian economy and the international economy, covering aspects of economics and economic theory relevant to the building and construction industry, property development and management. The course will introduce the student to economic theory and a broad range of macroeconomic concepts, issues and policies in the context of the Australian economy and its relationship with the rest of the world.

16523
Advanced Cost Engineering
8cp; prerequisite(s): 16521 Cost Planning and Modelling
Undergraduate
This subject teaches students advanced evaluation techniques such as life-cost planning and analysis, cost-benefit analysis, multi-objective decision analysis, value management and post-occupancy evaluation. Students will prepare feasibility studies for development projects, and learn about facilities management, energy auditing, environmental considerations and sustainable development.

16531
Estimating 1
6cp; prerequisite(s): 16543 Quantities
Undergraduate
Centred on the development of techniques and skills for the pricing of construction work, this subject will include: conceptual and bid estimating; calculation of labour, material, plant, subcontract and indirect costs; pricing of bill of quantities items; obtaining and checking subcontract quotations, and tendering procedures.

16532
Estimating 2
8cp; prerequisite(s): 16531 Estimating 1
Undergraduate
A review of the techniques used in the preparation of competitive tenders for construction projects is undertaken. Tendering objectives and procedures are examined in detail. Topics will include: bidding strategy theory and practice including statistical applications; risk analysis and risk evaluation theory; probabilistic estimating techniques; and cost planning in building construction.

16533
Estimating
8cp; prerequisite(s): 16501 Quantity Surveying 1
Undergraduate
In this subject students learn about estimating practice and techniques, including the breakdown of construction costs into labour, material, plant, subcontract and indirect cost components, pricing of bill of quantities items, obtaining and checking subcontract quotations, pricing preliminaries and overheads, tender preparation and the application of computer software.

16534
Project Planning and Risk
8cp; prerequisite(s): 16533 Estimating
Undergraduate
This subject covers the following topics: construction planning techniques and time management; materials handling systems and their application; estimating project costs using activities and resources; techniques used in the preparation of competitive tenders for construction projects; tendering strategies, objectives and procedures; financing of construction projects; risk analysis, risk evaluation theory and computer modelling; and bidding theory and practice including statistical applications.

16543
Quantities
6cp
Undergraduate
The aim of this subject is to give an introduction to measurement and calculation of construction quantities. Topics will include: principles of measurement, set-out and notation; the preparation and uses of a bill of
quantities and types of documentation formats in common use; the acquiring of competence in preparing trade packages within a bill of quantities in accordance with the current Australian Standard Method of Measurement; measurement rules and procedures; the acquiring of competency in preparation of a builder's bill; and computer measurement systems.

16551
Economics
8cp
Undergraduate
This subject covers two major areas of economic analysis. The first of these is microeconomics, where students learn traditional microeconomic theory but with a property market slant. Each topic covered, such as consumer equilibrium theory, production theory, competition theory, and resource pricing theory, is directly and indirectly related to the property market to ensure student understanding of the relevance, and application of each concept. The second area is macroeconomics, where students develop analytical tools which provide insight into the nature of major common issues currently of importance to Australia. The interrelationship of macroeconomic variables as well as the influence of microeconomic reform on the economy's overall efficiency is emphasised, with application to the property market stressed in each topic covered.

16552
Financial and Trust Accounting
6cp
Undergraduate
This subject is an introduction to basic accounting. It covers the following topics: the preparation and use of accounting information; the tools used; accounting concepts related to partnerships, corporations and manufacturing enterprise; accounting related to business funds and cash flows, trust accounting; and use of data processing.

16553
Finance and Investment Analysis
8cp
Undergraduate
This subject is an overview of the corporate financial system in Australia. It covers the following topics: concepts and techniques of financial evaluation; risk management; financing of investments; investment analysis and methods of financing; and quantitative methods for research and investment.

16554
Urban Economics
8cp
Undergraduate
This subject covers economic theories of land use including location theory, urbanisation, demographics of cities, role of levels of government, urban services, privatisation, urban problems, urban renewal and decentralisation.

16621
Design Evaluation
8cp
Undergraduate
This subject is an examination of the following: the factors that affect building design; the problems that architects face in designing buildings; building orientation and thermal performance; design history and philosophy; principles and terminology used by structural engineers; and structural evaluation of building systems.

16622
Environmental Planning
8cp
Undergraduate
This subject looks at the contextual issues which relate to human impact on the environment. These include the following: environmental impact statements; economic theories of land use including urbanisation; effects of controls; provision of services; rehabilitation and renewal; welfare provision; transportation; decentralisation; heritage considerations; environmental law and procedures; powers of environmental protection agencies; global warming and ozone depletion; international conservation issues; and policy strategies and initiatives.

16651
Urban Planning
4cp
Undergraduate
This subject looks at the economics of town planning, the policies of urban development, the process of development control, and the analysis of land use patterns.
16652
Environmental Design
4cp
Undergraduate
This subject is an introduction to the built environment and the environmental impact of cities. It looks at the concept of ecologically sustainable development and the use of appropriate design responses to the physical and social environment.

16721
Material Science
8cp
Undergraduate
This subject looks at the following topics: the properties and behaviour of building materials, in particular the characteristics of metal, timber and concrete; and material testing. It also covers the theory of architectural science; and heat, light and sound principles and their application to building design and material selection.

16725
Material Science 1
6cp
Undergraduate
The properties and behaviour of building materials, in particular the characteristics of metal, timber and concrete. Material testing.

16726
Material Science 2
6cp; prerequisite(s): 16725 Material Science 1
Undergraduate
A detailed course in concrete technology emphasising those aspects of concrete properties which are relevant to the building site. The properties and uses of mastics and sealants. Properties of surface coatings.

16751
International Property Investment
8cp
Postgraduate
The subject analyses the globalisation of real estate markets and examines the factors that determine such foreign investment. Particular focus is on the Australian and the Asia Pacific property markets.

16805
Legal Studies 1
8cp
Postgraduate
An introduction to the legal system in Australia including sources of law, the court system and legal personnel. International comparisons. A detailed study of contract law and an outline of criminal law, civil law, industrial law, insurance law, property law, the law of business associations and dispute resolution.

16806
Legal Studies 2
8cp; prerequisite(s): 16805 Legal Studies 1
Postgraduate
The tortious liability imposed by the law upon professionals, some major contractual problems related to the construction industry and an outline of employment law and statutory industrial regulation. Legal research and referencing skills. International case studies. The subject may be undertaken in a distance learning mode.

16807
Introduction to Law
6cp
Undergraduate
This subject is an introduction to the legal system in Australia including sources of law, the court system and the legal personnel. It includes a detailed study of contract law and an outline of criminal law, civil law, industrial law, insurance law, dispute resolution, property law and the law of business associations.

16808
Construction Law
6cp; prerequisite(s): 16807 Introduction to Law
Undergraduate
This subject is based on the tortious liability imposed by the law upon professionals, some major contractual problems related to the building industry and an outline of employment law and statutory industrial regulation.
16851
Introduction to Law
6cp
Undergraduate
This subject is an introduction to the legal system in Australia including sources of law, the court system and legal personnel. It includes a detailed study of contract law and an outline of criminal law, civil law, industrial law, insurance law, dispute resolution, property law and the law of business associations.

16853
Planning and Environmental Law
4cp
Undergraduate
This subject looks at the following topics: the principles of the law regulating development; environmental impact and conservation; and regulating bodies and courts.

16854
Real Estate Law
4cp
Undergraduate
This subject focuses on the principles and details of real estate law and covers the following topics: the law relating to agents; consumer protection; sale of goods; and trade practices legislation. It also looks at the principles associated with the transfer and acquisition of property and includes the study of the various Real Property titles, the Strata Title (Management) Act and Strata Title (Development) Act the responsibilities of the strata manager.

16901
Structures 1
6cp
Undergraduate
An introduction to structure applied to a simple building. The building will be the project in the subject 16010 Construction Project 1. Theory is introduced to enable simple proportioning of members to be carried out.

16902
Structures 2
6cp; prerequisite(s): 16901 Structures 1
Undergraduate
Structures: The design of simple structural elements in timber steel and reinforced concrete related to the buildings studied in the subject. Little additional analysis is covered; most is an application of materials.

Geomechanics: Soil characteristics, classification and lab testing and site investigation/monitoring. Design of footings taking into account soil stresses, immediate/long term settlements; gravity of sheetpile retaining walls. Geosynthetics in construction.

16903
Structures 3
6cp; prerequisite(s): 16902 Structures 2
Undergraduate
Analysis of structural action is extended to statically indeterminate beams, frames and two-way reinforced concrete slabs. Computer analysis is used to examine structural action and to automatically design frame elements.

16961
Project
10cp; prerequisite: Years 1 to 3 (of full-time) or 1 to 5 (of part-time) Land Economics course
Undergraduate
This subject consists of a major project, undertaken by each student, involving the detailed study of an individual topic with the preparation of a comprehensive report.

16970
Practical Urban Planning 1A
6cp
Postgraduate
An introduction to local planning and the management of the local environment, with the emphasis on the application of concepts and policies through practical planning techniques.

16971
Practical Urban Planning 1B
4cp
Postgraduate
This subject continues the introduction to local planning and the management of the local environment, with the emphasis on the application of concepts and policies through practical planning techniques.
16972
Practical Urban Planning 2A
6cp
Postgraduate
This subject is an introduction to the planning of regions such as Sydney, and the social, economical and environmental issues which are addressed. The emphasis is on the application of concepts and policies through practical planning techniques.

16973
Practical Urban Planning 2B
4cp
Postgraduate
This subject continues the introduction to the planning of regions such as Sydney, and the social, economical and environmental issues which are addressed by planners. The emphasis is on the application of concepts and policies through practical planning techniques.

16974
Theory and Practice of Urban Planning 1A
6cp
Postgraduate
An introduction to local planning and the management of the local environment, with the emphasis on the application of concepts and policies through practical planning techniques.

16975
Theory and Practice of Urban Planning 1B
4cp
Postgraduate
This subject continues the introduction to local planning and the management of the local environment, with the emphasis on the application of concepts and policies through practical planning techniques.

16976
Theory and Practice of Urban Planning 2A
6cp
Postgraduate
An introduction to the planning of regions such as Sydney, and the social, economical and environmental issues which are addressed in such planning: the emphasis is on the application of concepts and policies through practical planning techniques.

16977
Theory and Practice of Urban Planning 2B
4cp
Postgraduate
This subject continues the introduction to the planning of regions such as Sydney, and the social, economical and environmental issues which are addressed in such planning: the emphasis is on the application of concepts and policies through practical planning techniques.

16997
Land Economics Experience (F/T)
Undergraduate

16998
Land Economics Experience (P/T)
Undergraduate

17101
Project Process 1
6cp
Postgraduate
This subject is an introduction to and overview of generic project management. It covers the following topics: characteristics of projects and project management; generic project phases and life cycles; an introduction to project management processes; the context of project management; and teams and teamwork in project management.

17105
Industry-specific Project Process 1
6cp
Postgraduate
Each subject in this strand will present a project management case study for a specific industry or project type. Industry-specific project processes and practices will be examined and critically evaluated and compared with generic process models. Building and construction industry projects will form the basis of one subject in this strand. Other specific industries and project types which may be examined in a subject in this strand, are as follows: information technology, 'soft' projects such as research and development; change management or organisation change; and product development.
17111  
**Project Integration**  
*6cp*  
*Postgraduate*  
This subject is an introduction to, and overview of, generic project management with an emphasis on the integration of processes within the project life cycle; generic project phases and life cycles; an introduction to the context of project management; teams and teamwork in project management.

17112  
**Project Scope**  
*3cp*  
*Postgraduate*  
As an introduction to, and overview of, project scope management, this subject emphasises the processes, tools and techniques used to ensure the project includes all the work necessary for its completion, including initiation, planning, definition, verification and control of project scope.

17113  
**Project Time**  
*3cp*  
*Postgraduate*  
This subject introduces the student to project time management with an emphasis on the processes, tools and techniques available to assist with achieving time control for a project including activity definition, activity sequencing, activity duration estimating, schedule development and schedule control.

17114  
**Project Cost**  
*3cp*  
*Postgraduate*  
This subject introduces the student to project cost management with an emphasis on the processes, tools and techniques available to assist with achieving cost control for a project; resource planning, cost estimating, cost budgeting, cost control and some emphasis on life-cycle costing.

17115  
**Project Quality**  
*3cp*  
*Postgraduate*  
This subject is an introduction to, and overview of, the quality management of generic projects with an emphasis on the basic tools and techniques associated with project quality management including the specific processes associated with: quality planning, quality assurance and quality control, cost budgeting, and cost control throughout the project life cycle.

17116  
**Project Human Resources**  
*3cp*  
*Postgraduate*  
Project human resource management includes the processes required to make the most effective use of the people involved with the project and provides an overview of organisational planning. Special emphasis is placed on staff acquisition for time-delimited projects, project roles and responsibilities, documentation and reporting relationships and project team building and development.

17117  
**Project Communications**  
*3cp*  
*Postgraduate*  
This subject centres on the development of expertise in the processes required to ensure timely and appropriate generation, collection, dissemination, storage, and finalisation of project information. Specific topics include project communications planning, project information distribution, project performance reporting and processes and tools for project administrative closure and finalisation.

17118  
**Project Risk**  
*3cp*  
*Postgraduate*  
This subject is based on an introduction to the theory and method associated with risk analysis and control. The subject includes the processes, tools and techniques associated with the management of risks, both positive and negative, for the project life cycle, including procedures for identification of risk, quantification of risk, risk-response development and risk-response control.
17119
Project Procurement
3cp
Postgraduate
The processes and techniques required to acquire the goods and services essential to completion of a project. Emphasis is placed on procurement planning, solicitation planning, solicitation processes, evaluation and selection of appropriate contractors or suppliers, contract administration, contract close-out and finalisation.

17120
Heritage and Development
4cp
Postgraduate
This subject is centred on the development of sites of heritage significance, including both statutory and strategic planning issues and practice and the evaluation of the statutory and community processes involved in heritage conservation issues. The economics of heritage conservation is discussed and an emphasis is placed on the creation of innovative solutions to the development of heritage buildings and sites.

171200
Heritage and Development (Extended)
6cp
Postgraduate
Development of sites of heritage significance, including both statutory and strategic planning issues and practice. Alternative solutions and approaches to the development of historic buildings and precincts. Evaluation of the statutory and community processes involved in heritage issues. This subject comprises the lecture/seminar material as for 17120 Heritage and Development (4cp) with the addition of a further item of assessment related to the objectives of the subject to be negotiated to address specific interests of the student.

17121
Native Title
6cp
Postgraduate

17122
Environmentally Sustainable Development
6cp
Postgraduate
Topics for detailed study will be selected from the following: cultural, political and financial influences underpinning and guiding the built environment in relation to the ecology and to sustainability. Effective planning and design processes and systems. Historical and philosophical origins of the modern environmental movement. The history and nature of environmental legislation. The role of authorities and planning instruments in relation to environmental assessment and planning. Sustainability and city planning. Traffic, waste and water management. Building design for sustainability. Environmental economics. Environmentally responsible development and life cycle costs. Environmental risk management. The environmental audit process. Environmental management planning. Application to a real development project.

17201
Project Process 2
6cp
Postgraduate
This subject examines the first, or initiation and concept phase, of a four-phase generic project process or life cycle. It covers the following topics: stakeholder identification; identification of needs and opportunities; internal and external factors affecting projects; project appraisal; project objectives and performance measures; generation and analysis of options; feasibility studies and sensitivity analysis; initial project time, cost, risk and quality plans; testing and approvals; and assessment of process capability.

17205
Industry-specific Project Process 2
6cp
Postgraduate
Each subject in this strand will present a project management case study for a specific industry or project type. Industry-specific project processes and practices will be examined and critically evaluated and compared with generic process models. Building and construction industry projects will form the basis of one subject in this strand. Other specific industries and project types which may be examined in a subject in this strand, are as follows:
information technology, 'soft' projects such as research and development; change management or organisation change; and product development.

The RCC (Recognition of Current Competence) strand of subjects provides experienced practitioners with an opportunity to have their project management competence recognised, for academic credit and professional registration, through preparation of a portfolio of evidence addressing the performance criteria for any of the Units in the Australian National Competency Standards for Project Management. Applicants will be assisted in the preparation of evidence by qualified workplace assessors.

Credit obtained through this pathway contribute to the postgraduate qualifications in Project Management listed above.

Exemptions will be granted to a maximum of 9 credit points for those who wish to contribute these credit points towards a Graduate Certificate, which requires 24 credit points.

¹ These subjects are part of the Recognition of Current Competence strand of subjects. See subject description 17219 as above.

17301
Project Process 3
6cp
Postgraduate

This subject examines the second, or planning and development, phase of a four-phase generic project process or life cycle. It covers the following topics: project scope management; project scheduling; development of project budgets; project quality management; project organisation and resourcing; project communication planning; project risk management; project documentation; change management; asset management; and value management.

17305
Project Technologies 1
6cp
Postgraduate

Each subject in this strand will cover, in more depth than is possible in other parts of the course, one or more project management topics which may be drawn from the following: the latest research and development in project management; managing project interfaces; project human resource management; project organisation; project leadership; risk management; project information management; advanced project cost and scheduling; value engineering and management; risk management; quality management and quality assurance; financial management; marketing; projects and the environment.
17401  
Project Process 4  
6cp  
Postgraduate  
This subject examines the third (implementation) and fourth (completion) phases of a four-phase generic project process or life cycle. It covers the following topics: management of internal and external project environments; management of stakeholder relationships; project scope and change control; project time and cost control; quality control and quality assurance; management of project human resources; project information management; contract management; conflict management; project commissioning and handover; post-project evaluation; and continuous improvement.

17405  
Project Technologies 2  
6cp  
Postgraduate  
Each subject in this strand will cover, in more depth than is possible in other parts of the course, one or more project management topics which may be drawn from the following: the latest research and development in project management; managing project interfaces; project human resource management; project organisation; project leadership; risk management; project information management; advanced project cost and scheduling; value engineering and management; risk management; quality management and quality assurance; financial management; marketing; projects and the environment.

17506  
Industry-specific Project Process 3  
6cp  
Postgraduate  
Each subject in this strand will present a project management case study for a specific industry or project type. Industry-specific project processes and practices will be examined and critically evaluated and compared with generic process models. Building and construction industry projects will form the basis of one subject in this strand. Other specific industries and project types which may be examined in a subject in this strand, are as follows: information technology, 'soft' projects such as research and development; change management or organisation change; and product development.

17507  
Industry Project Studies 1  
12cp  
Postgraduate  

17508  
Industry Project Studies 2  
12cp  
Postgraduate  

17509  
Industry Project Studies 3  
12cp  
Postgraduate  
This strand of subjects are work-based learning subjects which allow students as individuals or as members of organisations to develop their competence and underpinning knowledge of project management as it applies to the workplace through application to specific projects in the workplace.

Study requirements, attendance pattern and assessment will be designed to suit the workplace conditions in consultation with the Subject Coordinator as it applies to each case or workplace project. This action learning approach is particularly suited to employer sponsored work place teams and distance learning.

These subjects are part of the Industry Project Studies strand of subjects. See subject description 17509 as above.

17517  
Research Methodology  
4cp  
Postgraduate  
This subject covers research methods and includes a study of the research process, research design, sampling, and estimation of sample size. Students study computer applications, with an introduction to computer analysis using the SPSS-X package. Students also study statistical methodology, which incorporates elementary statistical analysis, with emphasis on non-parametric statistics. Theory generation is also part of the subject.
17518
Advanced Property Development
6cp
Postgraduate
The subject will give students an advanced knowledge of the property development process and its decision making. As part of the subject, there will be an extensive use of DCF analysis.

17519
Property Research Methods
6cp
Postgraduate
Research methods: students will study the research process, research and questionnaire design, sampling, estimation and sample size, etc. and their application to property situations. Statistical methodology: elementary statistical analysis, with emphasis on non-parametric statistics. Theory generation. Review of relevant property research literature. Students will be given an introduction to relevant statistical computer packages.

17540
Facility Economics
24cp
Postgraduate
This subject explores issues affecting the economic evaluation and operation of existing built facilities in the context of improved business performance and worker productivity. It includes an understanding of facility strategies, organisational responsibilities and appropriate decision-making tools. Specific areas of focus include computer-aided facility management, risk-analysis techniques, maintenance planning and value-adding methodologies.

17550
Environmental Economics
24cp
Postgraduate
This subject explores issues affecting the interaction between economic development and environmental protection. It includes an understanding of the importance of ecologically sustainable development and the provision of strategic advice on the most effective use of resources over a project’s life cycle. Advanced selection criteria and a methodology for the measurement of sustainability are discussed in the context of political, legal, ecological and societal considerations.

17560
Research Project
24cp
Postgraduate
This subject comprises the preparation and submission of a dissertation concerning the detailed study of an individual topic related to the field of facility economics. Research methodology and use of quantitative analysis are part of the course content. The dissertation shall involve identification of a problem, a thorough literature review of the topic and development of a solution based on a selected research methodology. The recommended solution should make a contribution to existing knowledge in the field.

17600
Graduate Project (MPM) (P/T)
14cp
Postgraduate
This subject involves a major study of a project or topic relevant to project management, undertaken by each student individually, and resulting in the preparation of a comprehensive report.

17601
Graduate Project (MPM) (F/T)
14cp
Postgraduate
This subject involves a major study of a project or topic relevant to project management, undertaken by each student individually, and resulting in the preparation of a comprehensive report.

17701
Environment and Control
6cp
Postgraduate
This subject covers the following topics: property development and statutory control processes, including both statutory and strategic planning issues and practice; alternative solutions and approaches to environmental issues and sustainable development; community consultation and dispute resolution; and communication of strategic advice to stakeholders on environmental issues.
17703
Property Taxation
4cp
Postgraduate
This subject involves the following: the analysis of various forms of taxation relating to property holdings and property investment; income tax, capital gains taxation, depreciation allowances, land tax and stamp duties; taxation of trusts; negative gearing and alternative forms of taxation and their likely impacts on the property industry.

17704
Advanced Property Finance
6cp
Postgraduate
This subject covers the following topics: sources and types of finance available for various property developments; debt versus equity; specialised financing techniques, including hybrids, long-term and offshore finance; project finance; and evaluation techniques and risk management.

17705
Contemporary Issues in Land Economics
6cp
Postgraduate
The content and topics of this subject will vary from year to year, depending on the topicality of particular issues. The subject aims to present students with an advanced understanding of current issues affecting the property industry. specialists from both academic and industry backgrounds will present and discuss issues.

17706
Research Project – Master in Land Economics
18cp
Postgraduate
In this subject students will undertake a detailed, in-depth and supervised study of an individual topic related to the field of land economics. They will prepare and submit a 25,000 word thesis which will comprise identification of a problem, a thorough literature research of the topic and development of a solution based on a selected research methodology. The work should make a contribution to existing knowledge in the field.

17707
Performance-based Certification
6cp
Postgraduate
This subject covers the intent of codes and regulations, regulation-making process, the Building Code of Australia, performance versus prescriptive provisions, drafting of building regulations, case studies, certification process, and certification of a major building.

17708
Natural Disasters and Risk Management
6cp
Postgraduate
This subject covers natural hazards and their management, risk assessment techniques and regimes, quantitative methods, risk reduction and management, approvals and risk, and decision making in the approvals process.

17710
Special Issues
6cp
Postgraduate
In this subject students prepare and submit a 10,000 word report, involving the detailed study of an individual topic related to the field of building surveying and assessment. The report shall comprise identification of the problem, a thorough literature review of the topic, presentation of a state-of-the-art report, and presentation of the report to peers.

17711
Fire Dynamics 1
6cp
Postgraduate
Basic Fire Engineering Fundamentals – problem-focused and applied-learning techniques in the areas of fluid dynamics, mass transfer and heat transfer in preparation for 17712 Fire Dynamics 2.

17712
Fire Dynamics 2
6cp
Postgraduate
17713
Human Behaviour in Fire
6cp
Postgraduate
Occipant characteristics, cues, response, egress simulation and design, egress systems, wayfinding, tenability criteria, design methodologies and verification.

17714
Fire Safety Systems
6cp
Postgraduate
Detailed coverage of all the fire safety sub-systems and terms of their contribution to life safety, property protection, contents protection etc. regarding their criteria, performance, operation, maintenance and control; including case studies.

17715
Research Project
24cp
Postgraduate
This subject will comprise advanced studies in the use of fire engineering and human response/movement models, application of fire risk assessment methods and a major case study or research project. Each student will be required to publish a paper in a refereed journal or present a paper at a major international conference on an aspect of fire engineering or the results of their case study.

17800
Planning 1A
6cp
Postgraduate
Planning is built around a planning project and is the central, integrating activity of the course. A real and relevant site is chosen: different aspects of development and planning processes are applied to that site in successive semesters. Knowledge is applied, skills are learned, and techniques of investigation, planning, design, communication and management are developed through practice.

The first semester sees the investigation of a major and complex site, through the documentation of its physical characteristics and its social and environmental context; the development of ideas for the site; the preparation of briefs and contracts; the development of skills in relevant aspects of planning practice.

17801
Planning 1B
6cp; prerequisite(s): 17800 Planning 1A
Postgraduate
This subject involves an analysis of the planning issues relating to the chosen site, through a study of the opportunities and constraints, an analysis of the political context, the development of strategies and the generation of options; and the development of skills in relevant aspects of planning practice.

17802
Planning 2A
6cp; prerequisite(s): 17801 Planning 1B
Postgraduate
This subject continues the assessment of planning options for the chosen site, through an evaluation of alternatives, an analysis of feasibilities, an assessment of impacts, and an analysis of benefits and costs; and the development of skills in relevant aspects of planning practice.

17803
Planning 2B
6cp; prerequisite(s): 17802 Planning 2A
Postgraduate
This subject covers the preparation of final plans for the chosen site, goals and objectives, policies, implementation mechanisms, visualisation, the presentation and promotion of the plan, and the development of skills in relevant aspects of planning practice.

17804
Sustainable Development
6cp
Postgraduate
This subject focuses on the physical environment and development where the following topics will be discussed: ecology, geomorphology, climate and noise measurement, with an examination of erosion, water pollution, solar access, air quality, wind effects and noise pollution; the source of environmental design criteria for urban development. Managing movement is the second major area of topics: current and projected practice in transportation engineering, traffic management, public transport provision and the design, construction and maintenance of roads; paratransit; pedestrian requirements and opportunities.
Finally, economic concepts and methods are discussed: the concepts of micro and macroeconomics, and the analysis of externalities in an urban and regional context; market analysis and appraisal; the nature of the Australian economy; understanding the property market; techniques of cost-benefit analysis; and the nature of a local economy.

17805
Urban Analysis
4cp
Postgraduate

Issues embraced by this subject include aspects of the history of state regulation of urban development; the history of town planning and the planning profession; the ideologies of planning; research for planning practice; and sources of information for urban policy, management and planning.

Property and development law is also a major focus of attention: aspects of property law including occupier’s liability, tenancy, resumption and compensation; nuisance law as it relates to planning and the environment; planning and development law including legislative framework, comparative models and intergovernmental relations; health and building control issues and related issues in planning; developer contributions; and current issues and controversies in planning and development law.

17806
Urban Economics and Infrastructure
6cp; prerequisite(s): 17804 Sustainable Development
Postgraduate

This subject introduces the student to four major areas: urban economics; the analysis of location as a factor in urban development; methods and purposes of feasibility studies; market analysis and valuation; and costings and estimating rates of return.

Urban and regional economic issues: as a demonstration of economic method and so as to examine a topic in depth, one of the following topics will be studied – housing, recreation, tourism, transportation, public sector finances, the incidence of infrastructure costs.

Management of land and services: the principles of soil and nature conservation and catchment management; the cultural significance of natural and historic environments, and heritage conservation; the design, construction and operation of water supply, sewerage, drainage, gas, electricity and telecommunications systems.

Current practice in the design and management of infrastructure: the values, concepts and methods used in engineering and related professions; the use of warrants and specifications, and approaches used in the design, construction, operation and maintenance of infrastructure and other elements in the built environment; the strengths and limitations of these practices.

17807
Urban Design and Management
4cp; prerequisite(s): 17805 Urban Analysis
Postgraduate

This subject is based on an introduction to the history of ideas of the city and of city form; aspects of the history of building and urban development; past and present attitudes and approaches to the management of the urban design process; principles, criteria and values used in urban design. The principles of the management of development and construction processes; the roles of the various players in urban development. The management of public sector planning agencies and the roles of planning staff; professional practice management.

Another major area of study is environmental law: the operation of environmental law in the Australian federal system; Commonwealth-State relationships; air, water, waste, and heritage law; the law and practice of environmental impact assessment; relevant principles of administrative law; implications for government. The role of the relevant courts and the nature of environmental litigation; changes in the treatment of standing; practice and procedure of the Land and Environment Court of NSW. Current issues and controversies in environmental law and policy.

17808
Specific Issues in Planning
6cp
Postgraduate

Centring on planning in the contemporary world of electoral politics, bureaucracies, business, resident action and environmental campaigns: this subject sees the detailed analysis of a small number of specific current issues.
17809
**Graduate Project (F/T)**
18cp over three semesters; prerequisite(s): all first semester subjects
Postgraduate
The graduate project consists of a major planning project based on real site(s)/area(s)/issues. The project will be carried out individually while collaborating with a group of three or four others. Each member of the collaborative group is responsible for a planning project which is assessed both on the quality of the work and on its integration with the work of the other members.

17810
**Graduate Project 1 (P/T)**
6cp; prerequisite(s): all first and second year subjects
Postgraduate
The graduate project consists of a major planning project based on real site(s)/area(s)/issues. The project will be carried out individually while collaborating with a group of three or four others. Each member of the collaborative group is responsible for a planning project which is assessed both on the quality of the work and on its integration with the work of the other members.

17811
**Graduate Project 2 (P/T)**
12cp; prerequisite(s): all first and second year subjects
Postgraduate
The graduate project consists of a major planning project based on real site(s)/area(s)/issues. The project will be carried out individually while collaborating with a group of three or four others. Each member of the collaborative group is responsible for a planning project which is assessed both on the quality of the work and on its integration with the work of the other members.

81020
**Management Techniques and Design**
4cp
Postgraduate
This subject provides students with a working knowledge of the range of management skills and techniques used in the planning and control of design projects. It consists of a series of seminars/tutorials, case studies and assignments concerned with such topics as: task scheduling; planning systems and control models; program evaluation and review techniques; critical path monitoring; organisation development; personnel recruitment and staffing structures; organisational models; and union and labour relations.

81022
**Desktop Publishing**
4cp
Postgraduate
This subject provides a working knowledge of microcomputer applications of particular relevance to design. A series of lectures and seminars/tutorials is undertaken to provide a working knowledge in the use of Macintosh microcomputers for a range of applications such as word processing, desktop publishing, scanning and graphics.

81024
**Computer Graphics 1**
4cp
Postgraduate
This subject provides the opportunity for selected postgraduate students to apply computer techniques to specific design projects using advanced graphics/animation programs.

81025
**Design History**
4cp
Postgraduate
This subject gives a historical perspective on design and designers. Lectures, seminars and tutorials are concerned with such topics as style, artifacts, communications, environment and culture, and group studies on different aspects of the technology/society interface.

81030
**3D Computer Animation 2**
4cp
Postgraduate
This subject develops and expands the basic knowledge of both the theory and operation of computer animation as learnt in 81925 3D Computer Animation 1, refining the different types of computer graphics in animation. The course includes the creation and manipulation of 3D images. Topics covered include advanced computer animation systems and theory, various animation software applications and video production techniques.
81031
Web Design
4cp
Postgraduate
This course develops the skills and abilities required to create pages and graphics on the Internet. The course introduces students to the basics of web page design and develops skills necessary to achieve these abilities. The primary focus of the class is on design problem solving and design issues currently applied to Internet Design.

81032
Internet Design
4cp
Postgraduate
This subject aims to give the students who have attained appropriate computer graphics and design skills the ability to develop a website combining good design techniques using the latest web design technologies. They will be encouraged to evaluate critically the implications of functional design for the Web. The course introduces students to all facets of web page design and website management.

81033
Multimedia 1
4cp
Postgraduate
This subject develops and expands the basic theories and skill learnt in 81925 3D Computer Animation 1. This course covers the topics of animation, inter-activity and computer-generated digital movies. The course also covers the design process in computer animation as well as theory and conceptualisation of design in computer animations.

81034
Multimedia 2
4cp
Postgraduate
This subject develops and expands the basic theories and skill learnt in 81030 3D Computer Animation 2. This course covers the topics of advanced animation, advanced inter-activity and advanced computer-generated digital movies. The course also covers the design process in computer animation as well as theory and conceptualisation of design in computer animations.

81035
Digital Print Media 1
4cp
Postgraduate
This subject aims to develop students' knowledge and skills in creating and developing design solutions using advanced computer applications. To enrol, students must have demonstrable ability in graphic and typographic design and have attained basic computer graphics skills. Students will be encouraged to be imaginative and conceptually demanding in evaluating digitally generated visual production as effective and relevant visually communicated solutions and professionally produced pre-press documents.

81036
Digital Print Media 2
4cp
Postgraduate
This subject aims to consolidate students' knowledge and develop advanced skills in creating and developing design solutions using appropriate computer applications. Students will be encouraged to be imaginative and conceptually demanding in evaluating digitally processed and refined graphic and typographic design as effective and relevant solutions to realistic design briefs produced as professionally viable visuals and print pre-press documents.

81920
Marketing and Design
4cp
Postgraduate
This subject provides students with a working knowledge of the concept of marketing, and an understanding of the problems faced by management in achieving marketing success. It consists of a series of seminar/tutorials including case studies concerned with such topics as market segmentation, market research, new product development, packaging, pricing, promotion, advertising, product image, test marketing, strategies and tactics for existing products, services and societal marketing, legislation, and consumerism.
81924
**Computer Graphics 2**

*4cp*  
*Postgraduate*

This subject aims to give selected students, who have attained appropriate experience in computer graphics and design skills, the ability to understand and operate high-end computer graphics and design programs. Students will be set a variety of projects and they will be required to undertake a wide range of computer programs. They will also be encouraged to develop their imagination, creativity and conceptual depth. The studio/design format of the class will be supported by visits to computer graphics agencies and in-class workshops with practising computer graphics designers.

81925
**3D Computer Animation 1**

*4cp*  
*Postgraduate*

This subject equips students with the basic knowledge of both the theory and operation of computer animation and the different types of computer graphics. Topics covered include computer animation systems, animation software, animation production and dropping animation to videotape.

82009
**Human Factors and Design**

*4cp*  
*Postgraduate*

This subject provides an understanding of the physiological, psychological and social factors pertinent to the successful interaction of humans, environments and machines in a range of contemporary work situations.

82901
**Psychology of Design**

*4cp*  
*Postgraduate*

This subject covers aspects of psychology especially relevant to design practice. Lectures and seminars are conducted on relevant examples and case studies to develop insights into the following: the fundamentals of human perception; nonverbal communication; human behaviour in small-scale environments such as workplaces and domestic situations; and human behaviour in large-scale environments such as towns and cities.

82902
**Sociology of Design**

*4cp*  
*Postgraduate*

This subject provides a sociological perspective and social definition of the designer, an understanding of the designer’s role in contemporary society, and the social uses of design.

82903
**Technological Change**

*4cp*  
*Postgraduate*

This subject provides an appreciation of political, economic and social influences on technological change and the processes developed to foster technological change. Particular emphasis is given to the Australian situation.

82905
**Research Methods**

*4cp*  
*Postgraduate*

This subject gives students an understanding of methods of research. It combines lectures with opportunities for first-hand experience. Lectures include choosing a topic, fact finding, assessment of information, problem definition and bounding, problem solving, project planning, forecasting and report writing. This is supplemented by practical sessions in the use of a major research library and especially its resources (abstracts, indices, computer databases), and problem solving (synetics, brainstorming).

82917
**Information Retrieval**

*4cp*  
*Postgraduate*

This subject will provide a comprehensive yet practical understanding of information-retrieval practices essential to effective professional and personal operation. It will address both formal and informal, traditional and novel resources.
82918
Design Ethics
4cp
Postgraduate
The subject enables a more critically incisive and rigorous appraisal of designing and designs as they impact on users and communities. It encourages the application of or demand for socially responsible criteria as an integral aspect of functional efficiency in design. It promotes an ethical and hence professional basis for evaluating design priorities and practical outcomes.

82919
Sustainable Design
4cp
Postgraduate
This subject explores the relation between ecological sustainability and design practice, leading in turn towards the development of ecodesign practices which usefully contribute towards a sustainable society.

83100
Fashion and Textile Fundamentals
6cp
Undergraduate
The aim of this subject is to introduce students to the process of fashion and textile design by developing a basic understanding of the fundamental elements necessary for further exploration of the design process. In textile design this will include the key components that constitute the process of design and fabrication for printed textiles: the nature of repetition, colour systems and conversion methods. In Fashion Design this will include the analysis of the form and structure of garments and the inherent relationship with textiles.

83230
F&T Communications 1
6cp
Undergraduate
Fashion and Textile Communication 1 introduces students to the systematic study of the human form and the physical world through both freehand and digital modes. The aim is to give students a greater understanding of visual language including analysis of the inter-relationship of the design elements. Studio-based workshops are supported by series of lectures tracing the history, trends and traditions of mark making and communication.

83240
Textile Systems
6cp; prerequisite(s): 83100 Fashion and Textile Fundamentals
Undergraduate
This subject involves the research and analysis of the significance of textiles in society and the various systems for the realisation of textile design. Specifications to industry and market levels as well as approaches to design concepts will be studied in a series of studio-based workshops.

83250
Design and Technique
6cp; prerequisite(s): 83100 Fashion and Textile Fundamentals
Undergraduate
This subject aims at teaching students the basic skills fundamental to the understanding of designed form through drape and pattern-making methodology and the assembly of designated garments. Students will learn the various systems and specifications of basic drape and pattern techniques. Theoretically the subject further explores the design process and the significance of fashion in society.

83331
Fashion Design 1
6cp; prerequisite(s): 83100 Fashion and Textile Fundamentals
Undergraduate
This subject builds on the technical aspect of fashion design through developing the basic skills of flat pattern and drape methodologies. Manufacturing methods are studied through a series of samplers and assembled garments to support parallel design projects and to preempt design inquiry in later modules. Research focuses on an historical context particularly social, cultural, political and technological change. The impact on adaptation of ideas from within that context are applied into design solutions.

83332
Print Technology
6cp; prerequisite(s): 83240 Textile Systems
Undergraduate
This subject allows students to continue to explore the professional field of textile design specifically in relation to the technology of textile print manufacture and production. The subject subsequently deals with research and
analysis of contemporary, cultural and historical textile design practice will provide the basis for concept development and application into a fashion context.

The development and preparation of a coordinated story of textile designs, selection of appropriate fabrics for print production, repeat patterning and conversion for industrial purposes, production methodologies, professional presentation, colour and dye technology and safe work practices.

**83333**

F&T Communications 2

6cp; prerequisite(s): 83230 F&T Communications 1

Undergraduate

Fashion and Textile Communication 2 develops students’ understanding of visual language specifically into Fashion and Textile Design. This will include the study of fashion illustration, range and production drawings, advanced layout and typography to assist students to formulate design solutions. Studio-based workshops are supported by series of lectures by industry specialists.

**83441**

Fashion Design 2

6cp; prerequisite(s): 83331 Fashion Design 1

Undergraduate

This subject aims at developing further the technical conversion skills covered in Fashion Design 1. Students begin to learn to manipulate the three dimensional form, through drape and flat pattern cutting. Students will learn the benefits of using these two techniques in tandem to realise and convert their design solutions. Design and theoretical studies will focus on the significance of how fashion reflects culture and society in a 20th century context.

**83442**

Sustainable Practice

6cp; prerequisite(s): 83332 Print Technology

Undergraduate

This subject introduces students to the concept of sustainable considerations, opportunities and practices that can be implemented utilising the design process. Analysis and examination of the life cycle from farm to fashion, colouring and design methods and notions of reuse, reduce and recycle will be studied in respect to the ecological, social and economic impact of the fashion and textile industries.

**83443**

Marketing and Management

6cp

Undergraduate

This subject focuses on introducing students to business practices and the impact they have on design practice. The Marketing component of the subject provides students with an appreciation and understanding of the relevance and application of design in the market place. It will present students with the opportunity to constructively plan, implement, analyse, and evaluate a number of design and marketing situations. The Management aspect of the subject focuses on exploring and developing the necessary skills needed as future design / managers, employers of staff and insights needed to employ and work with people.

**83551**

Fashion Design 3

6cp; prerequisite(s): 83441 Fashion Design 2

Undergraduate

This subject focuses on synergy of advanced drape and pattern manipulation methodologies. Students will use more advanced application of these two techniques in tandem to realise and convert their design solutions. Students develop and practice more complex design and enquire into the manufacturing methods of soft tailoring. Design studies will focus on the significance of fashion in the late 20th century and beyond and will focus on the predictive process at the high end of the marketplace, how marketing drives ideas and the business of fashion, aspect of design shelf life, at varying levels of the market. Theoretical studies inquire into the changing nature of gender and identity within contemporary society.

**83552**

Digital Fashion and Textiles Elective

6cp; prerequisite(s): 83333 F&T Communications 2; (or intermediate computing skills)

Undergraduate

To explore the potential of digital imaging for the fashion and textile industries. Students will explore 2D and 3D digital imaging through problem-based learning projects and research. This includes a library of artifacts texture mapped for further reference. The potential of web design is explored as a tool for international profiling and marketing of design.
Key issues to be explored include rapid prototyping for fashion client presentation, digital transference and output capabilities.

83553
Research Project F&T
6cp
Undergraduate
This subject is a theoretical inquiry into the contemporary nature of design at a global level. The subject covers fashion and textile issues, and broader issues that reflect and impact into the industry, within both a contemporary and possible future construct. This subject is based on a series of lectures, seminars and tutorials.

83661
Fashion Design Elective
6cp; prerequisite(s): 83551 Fashion Design 3
Undergraduate
This subject has three offerings:
1. A specialisation focus into the issue of designing for men. This includes inquiry into design and the fundamental differences to designing for women. Theory looks into the history of menswear and issues around gender and dress codes.
2. Alternately this subject also offers students the opportunity to experience working commercially in conjunction with industry on real-time design projects, through to their ultimate solutions.
3. Other choices of study include modules offered in the elective design strand.

83662
Design and Industry
6cp; prerequisite(s): 83553 Research Project F&T
Undergraduate
In conjunction with the professional work experience program this subject offers students the opportunity to gain knowledge about industry practices, manufacturing and production processes and the role of design in the Australian fashion and textile industries. Students are given the opportunity to research a significant aspect of the industry and will be assisted in developing individual design projects. The subject is supported by guest lectures, seminars and industrial site visits.

83663
Professional Practice F&T
6cp; prerequisite(s): 83443 Marketing and Management
Undergraduate
This subject analyses the structure and workings of small design business within the framework of the fashion and textile industry. It looks at the varying constructs that can be successfully developed in a contemporary business world with the assistance of government agencies, mentor systems and other new entrepreneurial developments. A special focus is put on the feasibility of small cooperatives.

83771
International Design
6cp; prerequisite(s): 83331 Fashion Design 1; 83441 Fashion Design 2; 83551 Fashion Design 3
Undergraduate
This subject focuses on international design, giving a holistic view of the many facets that make design work and products sell through a global manufacturing and marketing strategy. Students work on a directional range to market internationally and within this context focus their design solutions outside their usual handwriting while impacting their personal design philosophy. Research covers fabric sourcing, marketing and the nuances of design and manufacture involved in working at this level. Focus is on predictive not descriptive design. The subject will also consist of a series of lectures, seminars and tutorials that address current international design issues.

83780
Research Dissertation F&T
6cp; prerequisite(s): 83553 Research Project F&T
Undergraduate
Students are required to research a project oriented to support their personal design philosophy or interest in a design-related topic. Research must be presented in a written form and may include visual components.
83880
Major Project F&T
24cp; prerequisite(s): all modules in 8Design (Fashion and Textile Design)
Undergraduate
Major project allows students to fully demonstrate their professional ability and accumulated knowledge from the previous year's study through the development and execution of a personally prepared design brief. The project is supported by seminars and tutorials on specialised aspects of the profession. Assessment is based on the process and presentation of completed work to a professional standard to a panel of academics and industry specialists.

84100
Industrial Design Project 100
6cp
Undergraduate
Systems
An introduction to Industrial Design from a system-based perspective. How the design process interfaces with economic, social, ethical, environmental and technological systems is explored. A design task is set to develop this view and also provide a benchmark for students to gauge design skills and knowledge.

84221
Industrial Design Project 200A
6cp; prerequisite(s): 84100 Industrial Design Project 100 and a minimum 15cp from:
85100 Common Design Project; 85200 Design Communications; 85300 Research Methods; 85400 Design History
Undergraduate
Information
This project-based subject focuses on information retrieval. The emphasis is on locating and compiling data efficiently, comprehensively, and economically within the framework of a given design task.
In addition to this primary goal students put into practice theoretical knowledge included in 84223 ID Workshop 200C, with emphasis on the communication of design concepts and proposals.

84222
Industrial Design Project 200B
6cp; prerequisite(s): 84100 Industrial Design Project 100 and a minimum 15cp from:
85100 Common Design Project; 85200 Design Communications; 85300 Research Methods; 85400 Design History
Undergraduate
Sustainability
This project introduces students to ways in which ecological sustainability considerations can be included in the design process. Product life cycle is the central theme with each stage of the cycle examined with respect to active ecological, economic and socio-cultural systems.

84223
Industrial Design Workshop 200C
6cp; prerequisite(s): 84100 Industrial Design Project 100 and a minimum 15cp from:
85100 Common Design Project; 85200 Design Communications; 85300 Research Methods; 85400 Design History
Undergraduate
Communication and design context
A series of workshops linked to the projects but focused on factors of importance to designers. The workshops in this subject centre around communication – through writing and drawing (free and geometrical), three-dimensional form and the use of computers as communication tools. Other workshop modules examine the context of design.

84331
Industrial Design Project 300A
6cp; prerequisite(s): 84221 Industrial Design Project 200A or 84222 Industrial Design Project 200B; and 84223 Industrial Design Workshop 200C
Undergraduate
Diversity
High-volume production can compromise the needs of minority groups of users be they cultural, gender, age, or physical ability based. This project focuses on social-cultural diversity. How to recognise different social and cultural groups’ interests and then address such concerns without adverse impact for the majority are explored. The relevance of niche market identification and options offered by mass customisation in coping with diversity are examined.
84332
Industrial Design Project 300B
6cp; prerequisite(s): 84221 Industrial Design Project 200A or 84222 Industrial Design Project 200B; and 84223 Industrial Design Workshop 200C
Undergraduate

Anthropometric diversity
This second of two projects dealing with diversity concentrates on anthropometric diversity. The adjustments, allowances and compromises made in the development of a product to accommodate the range of human profiles are the subject of this project. The project also focuses on the use of mechanical principals in resolving design requirements.

84333
Industrial Design Workshop 300C
6cp; prerequisite(s): 84221 Industrial Design Project 200A or 84222 Industrial Design Project 200B; and 84223 Industrial Design Workshop 200C
Undergraduate

Design skills
These workshops begin to expand on the factors examined in design context, a component of 84223 ID Workshop 200. Subjects include basic engineering, drafting, ergonomics, and materials and processes. Other workshops develop skills in rendering and computing. Where appropriate the workshops support the concurrent projects.

84441
Industrial Design Project 400A
6cp; prerequisite(s): 84331 Industrial Design Project 300A or 84332 Industrial Design Project 300B; and 84333 Industrial Design Workshop 300C
Undergraduate

Product development
This project involves participation in all stages in the design process, from concept through to presentation of a comprehensive product solution. Students work from a detailed brief for a new consumer product and are supported by seminars and personal tuition in research and development activities. Identifying and understanding the target market is a crucial first stage in this process.

84442
Industrial Design Project 400B
6cp; prerequisite(s): 84331 Industrial Design Project 300A or 84332 Industrial Design Project 300B; and 84333 Industrial Design Workshop 300C
Undergraduate

Collaboration
Designers rarely work in isolation. This project is aimed at improving communication skills during the design process. While the topic of the project will in part be determined by the professional interests of the participants, the focus will centre on collaboration and techniques used to facilitate group working. Projects might involve industry or students studying disciplines other than design.

84443
Industrial Design Workshop 400C
6cp; prerequisite(s): 84331 Industrial Design Project 300A or 84332 Industrial Design Project 300B; and 84333 Industrial Design Workshop 300C
Undergraduate

Design skills, design futures
Continues the series of workshops supporting the projects and developing skills in engineering science, engineering drafting and manufacturing, and visual communication. New directions of design and the future contexts of design is the theme for one of the workshops.

84551
Industrial Design Project 500A
6cp; prerequisite(s): 84441 Industrial Design Project 400A or 84442 Industrial Design Project 400B; and 84443 Industrial Design Workshop 400C
Undergraduate

Creativity
Creativity is central to all design activity. This project focuses on the nature of creativity at the various stages of the design process and incorporates practical application of theoretical methods devised to enhance creative outcomes.
84552
Industrial Design Project 500B
6cp; prerequisite(s): 84441 Industrial Design Project 400A or 84442 Industrial Design Project 400B; and 84443 Industrial Design Workshop 400C
Undergraduate

Design directions
The opportunities for graduates in Industrial Design are many and varied. This project is about exploring different careers that could be available on completion of this course. Students research one or more options which appeal to them. Past graduates and practicing designers are invited to talk about their experiences and some of the realities of working as professionals.

84553
Industrial Design Workshop 500C
6cp; prerequisite(s): 84441 Industrial Design Project 400A or 84442 Industrial Design Project 400B; and 84443 Industrial Design Workshop 400C
Undergraduate

Design skills, marketing
The modules manufacturing technology, engineering science, and computing are continued with additional units focusing on applied marketing, and the study of graphics with an emphasis on the use of graphics on products.

84661
Industrial Design Project 600A
6cp; prerequisite(s): 84551 Industrial Design Project 500A or 84552 Industrial Design Project 500B; and 84553 Industrial Design Workshop 500C
Undergraduate

Work experience
Students are placed in industry in order to introduce them to the realities of manufacturing and help develop an understanding of some of the implications of design decisions as they relate to the manufacturing process.

84552
Industrial Design Project 600B
6cp; prerequisite(s): 84551 Industrial Design Project 500A or 84552 Industrial Design Project 500B; and 84553 Industrial Design Workshop 500C
Undergraduate

Interface design
Electronically controlled interfaces have the ability to improve efficiency, functionality, and ease the serviceability of products. This project examines the processes required to describe, plan and design appropriate electronic interfaces for consumer products and capital goods.

84663
Industrial Design Workshop 600C
6cp; prerequisite(s): 84551 Industrial Design Project 500A or 84552 Industrial Design Project 500B; and 84553 Industrial Design Workshop 500C
Undergraduate

Design skills, design management
The final components of the engineering science and computing modules are joined by a CAD-based rendering module. Managing the design process at macro and micro levels makes up the last of the units.

84771
Industrial Design Project 700A
6cp; prerequisite(s): 84661 Industrial Design Project 600A or 84662 Industrial Design Project 600B; and 84663 Industrial Design Workshop 600C
Undergraduate

Market focus
A manufacturer or company representative briefs the students on a real world design problem as seen from a marketing perspective. Students are required to draft a formal brief, prepare a task/time sheet, and develop a resolution to the problem. On completion they present the solution to the 'client' for feedback.
Research Dissertation ID
6cp; prerequisite(s): 84661 Industrial Design Project 600A or 84662 Industrial Design Project 600B; and 84663 Industrial Design Workshop 600C
Undergraduate

Design systems
Research Dissertation ties together many of the strands of the program to date. Students examine an activity field from a design systems perspective – the tasks required to perform the activity, the current products involved, the size of the field and its complexity. In short all the systems which interact with the field of study. The aim is to find where improvements might be made and how they might be implemented, either by changes to the system or by the introduction of new or improved products. The results are compiled in a report.

Industrial Design Major Project
24cp; prerequisite(s): 84771 Industrial Design Project 700A; 84780 Research Dissertation ID
Undergraduate

The major project is determined by the student in consultation with staff, the topic is normally derived from research carried out in ‘Research Dissertation’. The field of study largely determines the content however it is expected the project will include an analysis, solution proposal, documentation and presentation. The aim of this project is to demonstrate the skills and knowledge gained during the course.

Common Design Project
6cp
Undergraduate

The Bachelor of Design is structured with problem solving as a central focus and students are introduced to the process in the Common Design Project subject. To solve the issues raised, the subject offers an interlocking set of studios and lectures.

The studio is the central activity of problem-based learning. It gives all students an opportunity to work towards a resolution of the design problems in teams in association with a studio supervisor. The studio sessions give time for a response to the problem briefs.

They are used to coordinate group activities that are central to the resolution of problems on the subjects of design and place and design and identity. As such, they are an indispensable part of problem-based learning and the design process.

The studio problems are supported by a series of contextual lectures. The lectures input information to the projects and therefore present a wide spectrum for design solutions based on social, cultural, political, environmental, economic and technological concerns. They also present the widest available view of design and allow for a general perspective to be developed by each student.

Design Communications
6cp
Undergraduate

This subject requires the student to undertake a series of lectures, studios and design projects aimed at developing their competency in communicating design ideas. As designers the issue of communication is vitally important and requires a clear understanding of making marks that represent ideas. These ideas may need to be expressed to other designers, clients, consultants or contractors. The subject will enhance the basic skills of the student in areas of free drawing/illustration, computer-generated drawing, measured drawing, and model making.

Research Methods
3cp
Undergraduate

Successful design is built from a base of relevant, current and inclusive information. This subject aims at introducing and developing the research skills needed firstly to define the boundaries of information required for any specific design task, secondly to introduce methods of locating information efficiently, and finally, processing this information so as to best support the process of design.
134 Subject descriptions

85400
Design History
3cp
Undergraduate
This subject gives a historical perspective on design and designers. This will be covered in lectures, seminars and/or tutorials by looking at three distinct areas:
Theory – the intellectual and philosophical framework that has shaped design in the last 200 years.
Social and Economic context – the relationship of design to the wider patterns of production and consumption.
The Object – the effects of changes in materials and technology on the form and meaning of material culture.

85420
Introduction to Thinking Design
2cp
Undergraduate
This subject provides a theoretical context for the design disciplines and assists the development of critical awareness. It looks at the functioning of design practice in various economic, cultural and environmental processes, provides a critical analysis of historical and contemporary perspectives on design and pursues the implications for design of the transition from craft tradition to industrial production.

85430
Design Ecology
2cp
Undergraduate
This subject provides an ecological and ethical context for the study of design. The objective of the course is to show that ethics should be constituted at the very core of design by examining the direct consequences of design on the made world and the meaning and significance of ecology, ecological design and design ethics.

85440
Design, Culture and Contemporary Thought
2cp
Undergraduate
Underlying the theoretical context of design, this subject shows the relevance for design of theories of culture, the effects of changes in technology, and the changing relationship of technology and culture.

85450
Design and Asia
2cp
Undergraduate
This subject contributes to the general education of design students by providing a theoretical context for the idea of a 'world view' and examines the placement of design in Eastern and Western cosmologies.

85460
Theories of Change
2cp
Undergraduate
This subject assists students to situate their understanding of design in more than one cultural/temporal framework by analysis of material on foundation theories and excursion into systems theory and theories of history and comparative philosophy.

85470
Criticism and Argument
2cp
Undergraduate
This subject develops critical thinking and awareness by examining and pursuing the basis of critical perspectives, genres of criticism, the presentation of critical arguments and written and verbal presentations of criticism.

85700
Interdisciplinary Project
6cp; prerequisite: contact the Faculty for further information
Undergraduate
A project or series of projects based on collaborative work with another design discipline. Coordinated between a number of design programs, the subject allows students to explore, at an advanced level, collaborative design methodologies for complex projects.

86000
Interior Methodology and Space
6cp
Undergraduate
This subject requires the student to develop a clear understanding of design methodology and the principles of the design process. The student will gain abilities to make clear design decisions through a process of analysis and synthesis. The assignments undertaken will
test the student’s design process. Spatial analysis, problem solving, and visual thinking are all areas of study within this subject. The subject provides the foundation of knowledge necessary to address future design problems.

86120

Interior Identity and Space
6cp; prerequisite(s): all level 100 subjects
Undergraduate

This subject requires the student to examine a basic understanding of purpose and meaning within interior spaces. Identity in space is achieved through the recognition and development of meaning in design elements both in their abstract form and in their material expression. Meaning can be understood in many ways, some of which will be explored by students in this subject. A series of lectures, tutorials, and design projects allows the student to explore the basic issues of meaning and identity and their effects on the designed spatial outcome.

86131

Interior Technology – Hospitality Design/Food Services
6cp; prerequisite(s): all level 200 subjects
Undergraduate

This subject includes the theory, application and testing of the information required to design and document hospitality interiors. The projects will include site survey, environmental systems, planning, and the furniture, equipment and fitout of restaurants, cafes and other hospitality spaces. Client presentation and contract documents – including working drawings, specifications, details and schedules will be included in assessment. The impact upon the spatial designed outcome from the selection of the cuisine will be examined through the projects, lectures and tutorials. Local government codes, the Building Code of Australia and relevant Australian Standards will also be studied. This subject will be supported by self-paced learning packages – InTechPak Hospitality Design/Food Service Projects.

86132

Interior Technology – Hospitality Design/ Accommodation
6cp; prerequisite(s): all level 200 subjects
Undergraduate

This subject includes the theory, application and testing of the information required to design and document hotel, motel and serviced apartment interiors. The projects will include site survey, environmental systems, planning, and the furniture, equipment and fitout of front of house, back of house and rooms. Client presentation and contract documents – including working drawings, specifications, details and schedules will be included in assessment. Local government codes, the Building Code of Australia and relevant Australian Standards will be studied. This subject will be supported by self-paced learning packages – InTechPak Residential Accommodation.

86140

Residential Design and Technology
6cp; prerequisite(s): all level 200 subjects
Undergraduate

This subject includes the theory, application and testing of the information required to design and document houses and apartment interiors. Through a series of lectures, projects, and tutorials, the students will gain knowledge of the various design issues involving domesticity. The projects will include site survey, environmental systems, planning, and the furniture, equipment and fitout of residential living, sleeping and utility spaces. Building access and utility services will also be studied. Client presentation and contract documents – including working drawings, specifications, details and schedules – will be included in assessment. Local government codes, the Building Code of Australia and relevant Australian Standards will be studied. This subject will be supported by self-paced learning packages – InTechPak Residential Accommodation.
86150  
**Corporate Identity/Retailing Design and Technology**  
*6cp; prerequisite(s): all level 200 subjects  
Undergraduate*

This subject includes the theory, application and testing of the information to corporate identity, design and document shopping precincts, department stores, shops and other retailing interiors. The projects will include site survey, environmental systems, planning, and the furniture, equipment and fitout of retailing spaces. Building access and utility services will be studied.

Client presentation and contract documents – including working drawings, specifications, details and schedules will be included in assessment. Local government codes, the Building Code of Australia and relevant Australian Standards will be studied. This subject will be supported by self-paced learning packages – InTechPak Commercial Tenancy.

86170  
**Conservation/Intervention Design and Technology**  
*6cp; prerequisite(s): all level 200 subjects  
Undergraduate*

This subject includes the theory, application and testing of the information to design and document interiors of buildings of heritage significance that are to undergo adaptive reuse and/or conservation. The projects will include site survey, environmental systems, planning, and the furniture, equipment and fitout of the interiors of heritage-listed spaces. Building access and utility services will be studied. Client presentation and contract documents – including working drawings, specifications, details and schedules will be included in assessment. Heritage Act, Conservation Charters, local government codes, the Building Code of Australia and relevant Australian Standards will be studied. This subject will be supported by self-paced learning packages – InTechPak Heritage Projects.

86160  
**Workplace Design and Technology**  
*6cp; prerequisite(s): all level 200 subjects  
Undergraduate*

Through a series of lectures, tutorials, site visits, and experimental design projects, students will gain a broader understanding of the issues faced in workplace design, specifically commercial office interiors. The interior design of workplaces is a significant focus of contemporary commercial interior design practice. Most people spend up to 40 hours a week in such interiors and depend on these spaces to fulfill a major life focus. The quality of the interior is of great importance. This subject will concentrate on the human factors within the workplace, as well as the structural, constructional and material factors that are pertinent to workplace environments. It will assist students in gaining an understanding of the elements employed to create working design solutions. Through design project work, students will explore the practical and theoretical issues involved in workplace design and apply knowledge gained in other subject areas. This subject will be supported by self-paced learning packages – InTechPak Commercial Tenancy.

86190  
**Special Industry Project**  
*6cp; prerequisite(s): at least 18cp from level 300/600 subjects  
Undergraduate*

This subject requires the student to explore beyond their basic understanding of the selected subject matter within the Industry stream. It is offered only to third-year students who have completed all prerequisites in the Interior Industry stream and who are capable of being involved in independent study. Students will explore a particular area of interest in the Industry subject stream through a self-directed learning contract. This flexible learning approach allows for the student to further examine this area of study in greater detail, or to explore another issue relevant to the interior design industry that has an application to their academic and career development. Projects that may be offered may respond to special conditions within the community and/or faculty. The Interior Design Program Director will appoint an academic supervisor for the Special Industry Projects, the range of projects will be limited to the capacity of the program and the academic supervisor to facilitate adequate study conditions and to offer support to the students.
86230

**Historical Models of Space**

*6cp; prerequisite(s): all level 200 subjects Undergraduate*

This subject requires the student to examine the various models of spatial manipulation from the classical roots of Western design tradition, through Eastern expressions of space, and concluding with the evolution of modernity in the development of Free Space. Through a series of lectures, studios, and tutorials, the student will research, study and undertake projects to acquire a comprehensive understanding of the central principles of spatial manipulation as traced from their historical roots.

86231

**Classical Space**

*6cp; prerequisite(s): all level 200 subjects Undergraduate*

This subject requires the student to explore the classical roots of Western design tradition. It gathers together design movements that have been derived from classical Greek and Roman traditions. The starting point of this subject is the Italian Renaissance, where architecture, design and fine art reinterpreted the traditions of Ancient Rome and Greece. The spread of the classical styles through Europe are explored including the impact of Mannerism, Baroque and Rococo. The course then traces classical influences through neoclassicism of the 19th century; 20th century totalitarian in Italy and Germany (Speirs, Paragno Guerrini) and postmodern eclecticism (Aldo Rossi, Michael Graves, Ricardo Bofill). The subject gives to the student an understanding of the principles of classical composition, which has formed the basis of the majority of Western design. Through a series of lectures, studios, and tutorials, the student will research, study and undertake projects to acquire a comprehensive understanding of the central principles of spatial manipulation as traced from their historical roots.

86232

**Eastern Space**

*6cp; prerequisite(s): all level 200 subjects Undergraduate*

This subject investigates a number of traditional design approaches, which have developed over millennia in non-Western cultures. It will place design as a physical manifestation of culture in the context of religious and spiritual beliefs. Students will see that design decisions can emanate from ordering principles that set design as a mediator between humankind and the cosmos. The subject will offer an alternative to Western concepts of design and social structure. Proportioning systems, spatial rules and symbols, material usage, climatic response, craft traditions and decoration will be studied within each cultural tradition. Through a series of lectures, studios, and tutorials, the student will research, study and undertake projects to acquire a comprehensive understanding of the central principles of spatial manipulation as traced from their historical roots.

86233

**Free Space**

*6cp; prerequisite(s): all level 200 subjects Undergraduate*

This subject traces the abrupt break from the overt decoration and ornamentation of late 19th century Western design to the essentialism of the modern movement. The subject will critically analyse the evolution of 20th century design and its impact on contemporary practice. The socio-political roots of modernism will provide a background to the study of cultural influences on design during this period. Through an understanding of the theories that underpin the modern movement, students will gain a greater understanding of the processes of design activity. A series of lectures, studios and tutorials together with student research, study and projects, will provide a comprehensive understanding of the central principles of modern spatial manipulation.

86240

**New Technology and Space**

*6cp; prerequisite(s): all level 200 subjects Undergraduate*

This subject requires the student to develop a clear understanding of the effects of new technologies that extend the discipline of interior design. Information technology and digital media in the form of drawing and CAD packages will be examined in detail. The emphasis will be on communication technologies, but new developments of other technologies that affect interior design will also be explored. A series of lectures, tutorials, workshops, and design projects allows the student to examine these issues in detail. The
assignments will allow the student to appreciate the changing technologies and implement these changes and the associated skills into other design subjects.

86250

**Behaviour and Space**

6cp; prerequisite(s): all level 200 subjects

*Undergraduate*

This subject introduces the student to the relationship between spaces and the behaviour they are designed to contain. Using a cross-disciplinary approach, ideas and methods from the fields of; sociology, psychology and anthropology are used to develop the student’s awareness of the interaction between people and their environment. The topics explored in this course suggest that this interaction can be both positive (e.g. high visit rates) as well as negative (vandalism). This course also seeks to establish the conceptual limits relating to behaviour within which designers must operate in professional practice. Through a series of lectures, studios, and tutorials, the student will research, study and undertake projects to acquire a comprehensive understanding of the central principles of spatial manipulation and its relationship to human behaviour.

86270

**Semiotics and Space**

6cp; prerequisite(s): all level 200 subjects

*Undergraduate*

This subject requires the student to examine basic principles of semiotics and post-structuralist theories that affect spatial manipulation. A series of lectures, tutorials, and design projects allows the student to explore the visual language and the issues of signs and their meaning. Detailed projects on these topics will provide the student with the knowledge to design meaningful human interior built environments.

86280

**Interior Theory and Space**

6cp; prerequisite(s): all level 200 subjects

*Undergraduate*

This subject requires the student to develop information retrieval and data collection tools along with analysis skills for use in interior design studies and research. Emphasis will be on the methodology of the research process. The students are required to undertake a series of assignments, which will test their research skills in the area of interior design theory. The subject will also require the student to demonstrate an understanding of the critical issues facing interior design, and to critically analyse these issues. An understanding of the current design theories presented through a series of lectures, seminar presentations and discussions will enable the student to develop their own philosophical approach to their work. This subject provides skills, information and issues necessary for the completion of 86780 Research Dissertation IT and 86880 Major Project IT.

86290

**Special Elements Project**

6cp; prerequisite(s): at least 18cp from level 300/600 subject

*Undergraduate*

This subject requires the student to explore beyond their basic understanding of the selected subject matter within the Interior Elements stream. It is offered only to third-year students who have completed all prerequisites in the Interior Elements stream and who are capable of being involved in independent study. The student will explore a particular area of interest in the Interior Elements subject stream through a self-directed learning contract. This flexible learning approach
allows for the student to further examine this area of study in greater detail, or to explore another issue relevant to an Interior Element that has an application to their academic and career development. Projects that may be offered may respond to special conditions within the community and/or faculty. The Interior Design Program Director will appoint an academic supervisor for the Special Elements Projects, the range of projects will be limited to the capacity of the program and the academic supervisor to facilitate adequate study conditions and to offer support to the students.

**86320**

**Material Science and Interior Space**

*6cp; prerequisite(s): all level 100 subjects Undergraduate*

This subject requires the student to develop a clear understanding of material technology and structural principles as they may be applied to interior design. Through practical application, the student will gain knowledge of the behaviour of materials within structural systems. Assignments are focused on developing a sensitivity to the issues of material and structural systems gained through first principles and not through lengthy engineering calculations and analysis. The subject provides the foundation of knowledge necessary to address future design problems.

**86331**

**Environment and Interior Space**

*6cp; prerequisite(s): all level 200 subjects Undergraduate*

This subject includes the theory, application and testing of the information to design and document interior spaces with a focus on the impact of the natural and artificial environment factors. Macro and micro environmental issues will be studied with emphasis on the impact they have on human occupation and availability of limited resources. The projects will include detailed surveys of existing environmental factors and the impact that changes to the environment wrought by the design requirements have on the interior space. Environmental impact studies, assessments and audits will be prepared. The projects will include site survey, environmental systems, planning and fitout of human occupation spaces. Client presentation and contract documents - including working drawings, specifications, details and schedules will be included in assessment. Local government codes, the Building Code of Australia and relevant Australian Standards will be studied.

**86340**

**Light and Space**

*6cp; prerequisite(s): all level 200 subjects Undergraduate*

This subject requires the student to examine the principles of lighting interior spaces and their application in designing interior spaces that satisfy human needs of comfort and security. A series of lectures, tutorial exercises, research projects, site visits and applied design projects will allow the students to gain experience in using light to enhance the quality of the interior space. The issues of daylight and artificial lighting raised in the lectures will be explored through detailed design projects that investigate the manipulation of the interior space to achieve the desired behavioural outcome for the users.

**86350**

**Sound and Space**

*6cp; prerequisite(s): all level 200 subjects Undergraduate*

This subject requires the student to examine the principles of acoustics and their application in designing interiors that satisfy human needs of comfort and security. A series of lectures, tutorial exercises, research projects and applied design projects will allow the students to gain experience in using sound as a determinant of interior quality. The issues raised in the lectures will be explored through detailed design projects that look at the manipulation of the interior space to achieve the desired behavioural outcome for the users.

**86360**

**Body and Space**

*6cp; prerequisite(s): all level 200 subjects Undergraduate*

This subject requires the student to examine a basic understanding of human physiology and its relationship to interior spaces. A series of lectures, tutorials, workshops, and design projects allows the student to explore the issues of anthropometrics, ergonomics, time-motion studies, and environmental contextual issues that affect humans within interior spaces. Detailed projects on human movement and perception will provide the student with the knowledge to design enjoyable and safe human interior built environments.
86370
New Materials and Space
6cp; prerequisite(s): all level 200 subjects
Undergraduate

This subject requires the student to explore beyond their basic understanding of materials and related technology by pushing the limits of current technological thought. A series of lectures, tutorials, site visits, and design projects allows the student to cross the borders of the usual material domain of interior design. The assignments will allow the student to appreciate the changing technologies and implement these changes into their design projects.

86390
Special Interior Science Project
6cp; prerequisite(s): at least 18cp from level 300/600 subjects
Undergraduate

This subject requires the student to explore beyond their basic understanding of the selected subject matter within the Interior Science stream. It is offered only to third-year students who have completed all prerequisites in the Interior Science stream and who are capable of being involved in independent study. The student will explore a particular area of interest in the Interior Science subject stream through a self-directed learning contract. This flexible learning approach allows for the student to further examine this area of study in greater detail, or to explore another issue relevant to Interior Science and Technology that has application to their academic and career development. The Interior Design Program Director will appoint an academic supervisor for the Special Industry Projects, the range of projects will be limited to the capacity of the program and the academic supervisor to facilitate adequate study conditions and to offer support to the students. Projects offered may respond to special conditions within the community and/ or Faculty.

86420
Interior Communications
6cp; prerequisite(s): all level 100 subjects
Undergraduate

This subject requires the student to undertake a series of lectures, studios and design projects aimed at developing their competency in communicating design ideas. As interior designers the issue of communication is vitally important and requires a clear understanding of making marks that represent ideas. These ideas may need to be expressed to other designers, clients, consultants or contractors. The subject will enhance the basic skills of the student in areas of free drawing/illustration, computer-generated drawing, measured drawing, and model making.

86777
Professional Practice and Industry Project
6cp; prerequisite(s): at least 72cp from level 300/600 (86 prefix) subjects
Undergraduate

Through a series of lectures, tutorials, site visits, and design projects, students will gain a broader understanding of the issues of professional responsibility and practice within the interior design profession. This subject will focus on the professional practice issues of ethics, contractual administration, and design management. These studies are furthered by the self-directed learning of the student through the research of material related to their major project topic. This subject enables the student to advance their understanding of the interior design profession, and demonstrate their comprehension of the knowledge gained so far in the course. This subject forms the supporting link with 86880 Major Project IT.

86780
Research Dissertation IT
6cp; prerequisite(s): at least 72cp from level 300/600 (86 prefix) subjects
Undergraduate

Research Dissertation IT requires students to develop a research project in conjunction with a supervising lecturer on a topic or an area of study which supports the student's personal direction and career orientation within design practice. Topics must relate to issues of interior design (e.g. its practice, theory, philosophy, history) or to related issues such as environmental systems or design phenomena. These topics may form the basis of the student's
major project topic in the second semester. Every student will investigate a chosen topic and prepare a written paper of 8,000 – 10,000 words. It is expected that the paper will demonstrate a high standard of research and appropriate standards of referencing and expression. The text may be supported by visual material.

86880
Major Project IT
24cp; prerequisite(s): 86710 Professional Practice and Industry Project; 86780 Research Dissertation IT
Undergraduate

This subject requires the student to demonstrate self-directed learning on a selected project of their choice or one offered by the program. Advice from academic supervisors in studio sessions will assist the student select and complete their program of study. Students are required to undertake the design of a complex interior design project that will test issues raised and knowledge gained throughout the course. The project will allow students to develop an holistic solution, demonstrative of their abilities as final-year design students, and require them to demonstrate a professional attitude to their work as a prelude to the practice of Interior Design after graduation. The project assessment is based on the supervisor’s assessment of the student’s work methods, and a panel critique assessment which takes into account the stated aims of the project and the level that they have been achieved. Preparation for this subject is carried out during the Professional Practice and Industry Project (86710) by the completion of the Major Project research.

87100
Design Projects VC 1
6cp
Undergraduate

This subject introduces students to a model of design practice and the methodology of designing in the field of Visual Communication. Introductory exercises introduce the perceptual principles of visual form, structuring and dynamics which are applied to the manipulation and application of words and images in the context of effective visual communication. Design projects involve students in research, practical exploration, idea generation, creative problem solving and design processing which culminates in the visual, oral and written presentation of completed project work. Students work both individually and in groups to encourage productive team work and improve interpersonal communication skills. Project briefs are designed to be topical, and relevant to students’ interests and stage of learning. Topics encourage originality and individual creativity and include investigation into aspects of identity, myths, legends and dreams.

87221
Design Studies VC 2
6cp; prerequisite(s): 85100 Common Design Project; 85200 Design Communications; 85300 Research Methods; 85400 Design History; 87100 Design Projects VC 1
Undergraduate

This subject introduces students to the significant art and design movements and the intellectual and philosophical frameworks which have influenced and shaped visual communication design over the last century. The subject will also introduce students to the diversity of Australian culture and develop an awareness, understanding and appreciation of the visual codes and iconography that make up contemporary culture. In addition, students will be introduced to the techniques and methodologies that are necessary for developing research approaches for visual communication studies.

87222
Design Projects VC 2
6cp; prerequisite(s): 85100 Common Design Project; 85200 Design Communications; 85300 Research Methods; 85400 Design History; 87100 Design Projects VC 1
Undergraduate

This subject develops students’ awareness and experience of designing in the area of Visual Communication. The theoretical understandings, sensibilities and skills acquired in previous and parallel subjects continue to be synthesised by undertaking progressively more complex design projects as individuals and in groups. Design projects introduce design for static graphics in conjunction with the more complex time based media of animation and video. This encourages design flexibility with words and images and media integration to produce hybrid forms and diverse applications. Project topics examine: the virtual world of word and image in print and on screen; the translation of sound and
speech into hierarchical structures and linear forms of visual narrative; and the integration of 3D form, 2D words, images, symbols and numeric systems into a personally published, limited edition, graphic product which is critically evaluated after user testing and before presentation.

87223
Word and Image

6cp; prerequisite(s): 85100 Common Design Project; 85200 Design Communications; 85300 Research Methods; 85400 Design History; 87100 Design Projects VC 1

Undergraduate

This subject introduces students to the languages and technologies of word and image design, processing and production. A lecture series and four practical workshops introduce the historical and contemporary applications of visual language and assist students to gain the knowledge and skills necessary for synthesis in design project work. Typography investigates the visualisation of the spoken word and written text. The form, structure and application of type is examined and applied through practical exercises to develop sensitivity to manipulating the visual structure of text communication to reinforce content. In the computer laboratory software programs (Illustrator, PageMaker, Photoshop) are introduced for the development and processing of typographic forms and applications.

In the design studio, drawing and image-making workshops develop visual acuity and the ability to translate the perceived world to the two-dimensional plane. Images are generated using a range of media and techniques and examined as the communication of observation and ideas. In the photography laboratory students become conversant with the photographic medium and the visual and technical skills inherent in visual production. This develops fluency in the language of photography and a personal viewpoint towards image capture and construction.

87331
Design Studies VC 3

6cp; prerequisite(s): 87221 Design Studies VC 2

Undergraduate

This subject will offer a broad range of views in relation to the contemporary context in which design operates. It will introduce key intellectual concepts in the contemporary social and political arena with particular reference to visual communication; these will include semiotics, deconstruction, hegemony, ethics, contemporary politics, class, sustainability, and user studies. Research will emphasise social responsibility and the role of the designer. All aspects of the subject will operate in order to help each student develop a personal philosophy of visual communication design.

87333
Typography 1

6cp; prerequisite(s): 87223 Word and Image

Undergraduate

This subject advances students' awareness, knowledge and skills in the design and production of words and texts as formally and technologically typeset and as hand generated expressive letterforms. Typography lectures examine the historical development of written and sign languages in the context of contemporary applications of hand written, typographic and symbol forms. Issues of figure/ground relationships, hierarchical structures, spatial organisation and typographic detailing of headline copy and text setting for legibility and readability are critically analysed and practically examined by hand and through digital production. Computing lectures introduce the use and advanced applications of software programs (Illustrator, PageMaker, Photoshop). Laboratory practice increases computer competence and directly supports the examination and processing of typographic forms and applications.

87335
Design Projects VC 3 (S)

6cp

Undergraduate

This one-semester subject is available to students normally enrolled in UTS courses other than Visual Communication. It enables students to undertake study over the Autumn semester with a reduced credit-point load and the requirement to complete two design projects. It is offered concurrently with 87342 Design Projects VC 3/4. For detailed information, reference should be made to the subject description for 87342. All students seeking enrolment are required to seek academic advice on prerequisite knowledge and skills.
87342
Design Projects VC 3/4
12cp; prerequisite(s): 87222 Design Projects VC 2
Undergraduate
This year-long subject develops students' awareness and experience of designing in the area of Visual Communication. A number of professionally realistic, multidisciplinary design projects introduce media complex visual communication problems which require students to reflect on the role and responsibility of design in the past and project into the future to examine the technological and social changes that impact on society and professional practice. Project work also requires students to research, originate, critically analyse, refine, process and present visualised concepts for realisation as both static/print/exhibit reproduction and moving/animation/video transmission to an identified audience. Lectures examine the historical evolution and contemporary state of design communication and production technologies. Project workshops offer experience in the design of: printed ephemera; 3D packaging; book and magazine publications; video and animation story boarding and introduce students to aspects of print, animation and video production.

87441
Design Studies VC 4
6cp; prerequisite(s): 87331 Design Studies VC 3
Undergraduate
This subject will further investigate the concepts of modernity, post-modernity, the avant garde, technology and sustainability as they pertain to visual communication design. Continuing from the prerequisite, there will be greater emphasis on coursework that requires students to research, develop and present material which displays their personal approaches to theories and practices of visual communication design.

87443
Typography 2
6cp; prerequisite(s): 87333 Typography 1
Undergraduate
Typography lectures examine the development of modernist typography and symbol design applied to historical and contemporary advertising, publishing and corporate design. The issues of typographic detailing for legibility and readability in various applications including both static print and dynamic screen formats are critically analysed and practically examined by hand and processed through digital production. This leads to the introduction of user testing at the latter stage of the semester. Computing lectures and demonstrations further develop knowledge and skills in advanced applications of software programs (Illustrator, PageMaker, Photoshop). Laboratory practice increases computer competence and directly supports the examination and processing of typographic forms and applications.

87445
Design Projects VC 4 (S)
6cp
Undergraduate
This one-semester subject is available to students normally enrolled in UTS courses other than Visual Communication. It enables students to undertake study over the Spring semester with a reduced credit-point load and the requirement to complete two design projects. It is offered concurrently with 87342 Design Projects VC 3/4. For detailed information, reference should be made to the subject description for 87342. All students seeking enrolment are required to seek academic advice on prerequisite knowledge and skills.

87551
Design Studies VC 5
6cp; prerequisite(s): 87441 Design Studies VC 4
Undergraduate
This subject gives students the background to begin to understand the structure of design businesses within the professional arenas. Issues of professional practice such as financial and tax matters and project management, copyright matters, the role of professional organisations and the contractual and other responsibilities of a designer will be covered. Students will also receive lectures on developing and applying analytical and critical approaches to design product in the context of design practice. In addition, students have the opportunity to initiate research and investigation of specific areas of design practice through visits to design studios. This will enable students to establish career paths and focus learning goals appropriate for their ambition.
87553

Visual Technologies 1

6cp; prerequisite(s): 87443 Typography 2
Undergraduate

Professional practice demands and each student's vocational orientation establishes the context for examining the theoretical issues surrounding the origination, perception, communication and application of visible languages including images, text and symbols, generated by hand and through media technologies. A choice of exploratory projects within this subject enables students to select a level of media specialisation which can be further developed over all later stages of study. Each project examines ways of identifying and balancing the many requirements within the successful visual communication of information and ideas by encouraging students to explore and develop a range of personal approaches, methodologies and production processes. Depending on selection, students will gain advanced knowledge of and skills in the design and production of text and image based visuals in areas of specialist practice. Options include graphics, image making, typography, photography, prepress, video, animation, multimedia and the Internet.

87555

Design Projects VC 5 (S)

6cp
Undergraduate

This one-semester subject is available to students normally enrolled in UTS courses other than Visual Communication. It enables students to undertake study over the Autumn semester with a reduced credit-point load and the requirement to undertake two design projects one of which may be a 'live' community-oriented project. It is offered concurrently with 87562 Design Projects VC 5/6. For detailed information, reference should be made to the subject description for 87562. All students seeking enrolment are required to seek academic advice on prerequisite knowledge and skills.

87562

Design Projects VC 5/6

12cp; prerequisite(s): 87342 Design Projects VC 3/4
Undergraduate

This year-long subject offers students a choice of realistic design projects each with a different professionally specific orientation. Formal study also requires students to gain the experience of working as a designer on a choice of live projects for a diverse range of community groups including the University. This may be undertaken as a member of the Visual Communication Design Studio which offers a design consultancy service, or as a member of a design team briefed with ongoing client consultation and supervised by lecturing staff. A five-week professional placement program is incorporated into the academic year and students may apply to participate in an exchange scheme to study overseas for the Spring semester.

87661

Design Studies VC 6

6cp; prerequisite(s): 87551 Design Studies VC 5
Undergraduate

Students will conduct a piece of self-initiated empirical inquiry of a topic of their choice under the supervision of a staff member. The topic should, where possible, support the student's academic and professional interests and development. A range of approaches will be discussed and analysed to enable students to make informed decisions on their methodological approach. Critical analysis is encouraged. Presentation can take a variety of forms: text, images, multimedia. In order to gain a better understanding of the Visual Communication design profession, students will also participate in the Professional Placement Program.

87663

Visual Technologies 2

6cp; prerequisite(s): 87553 Visual Technologies 1
Undergraduate

This subject offers students an advanced level of typography in conjunction with image processing and production through a self-directed choice of media specialisation or as personally negotiated through a learning contract. The use of advanced digital media is demonstrated and further experience is gained in an integration of typography with a choice
of digital technologies including new image generation, graphics, photography, animation, video, multimedia and the Internet. Students are encouraged to integrate theory and practice and to be highly experimental in their visual research of image and text production in their chosen media. Whenever possible, projects are introduced which require students to develop ideas and collaborate in researching the integration of visible languages in various forms of multimedia and hybrid presentations.

87665
Design Projects VC 6 (S)
6cp
Undergraduate
This one-semester subject is available to students normally enrolled in UTS courses other than Visual Communication. It enables students to undertake study over the Spring semester with a reduced credit-point load and the requirement to undertake one design project which may be a 'live' community-oriented project and complete a period of professional placement. It is offered concurrently with 87562 Design Projects VC 5/6. For detailed information, reference should be made to the subject description for 87562. All students seeking enrolment are required to seek academic advice on prerequisite knowledge and skills.

87772
Design Projects VC 7
6cp; prerequisite(s): 87562 Design Projects VC 5/6
Undergraduate
At this advanced level of study, students are encouraged to be self directed in their choice of projects to meet the needs of vocational goals and professional orientation. Students can select from a number of projects or negotiate a personally directed project using a learning contract (personal brief). This may be undertaken in the workplace as agreed between academic supervisor, student and employer. Projects aim to promote a continuing openness to new ideas and actively support individual and group enterprise, creative problem solving and the incorporation of change into the learning process. Through self-directed study students are encouraged to engage in a critique of current work practices in visual communication and investigate the anomalies which challenge the existing framework of professional practice and the social role of design in Australia in order to consolidate the direction of final-semester study.

87780
Research Dissertation VC
6cp; prerequisite(s): 87661 Design Studies VC 6
Undergraduate
In this subject, students are required to undertake a research project, oriented to support their personal direction, on a topic or area of study selected by the student under the guidance of a Supervising Lecturer. The dissertation can be presented in written form or can include a substantial component of visual research.

87880
Major Project VC
24cp; prerequisite(s): 87772 Design Projects VC 7; 87780 Research Dissertation VC; Common Design at 100 & 700 levels 24cp; Common Theory Subjects 12cp; Electives 24cp
Undergraduate
This final subject combines all study fields and completes study in the Visual Communication course. Students undertake self-directed projects demanding high levels of professionalism and personal innovation. Projects are academically supervised facilitating the process whereby students confidently move through the final stage from dependence to self-directed and lifelong learner. Assessment is undertaken by a panel of academics advised by external professional designers. Students' personal aims to challenge existing situations, values and practices are supported through the process which also encourages students to define their place in society and practice in order to be immediately effective and ultimately influence the future direction of current practice.

88302
Environmental Communications 1
6cp
Undergraduate
This subject introduces the issues and the principles of environmental communication by lectures, workshops and site visits. Students will apply and demonstrate their understanding of these issues in a design project based on a given exterior site. Students have the opportunity to devise a project relevant to their major area of study.
146 Subject descriptions

88304
Illustration 1
6cp
Undergraduate
This subject provides students with an understanding of the use of illustration as a communication tool, together with an introduction to a wide range of illustration media techniques and experience of their use in a number of applications relevant to their various design majors. A series of workshops, demonstrations and practical tasks concerned with a range of techniques and applications is undertaken.

88305
Photography 1
6cp
Undergraduate
This subject provides students with a command of photographic techniques and experience of their application in a range of specialist areas relevant to the various design majors. A series of seminars/tutorials and tasks is undertaken. Emphasis is placed on the visualisation of concepts and the exploration of suitable means for realising those concepts. Specific aspects of photography (e.g., fashion, product) are addressed and students are given opportunities for appropriate specialisation.

88306
Textile Design 1
6cp
Undergraduate
This studio based subject introduces students to a range of textile processes and techniques. Students explore surface design through printmaking methods including block printing, screen printing and experimental alternatives. Traditional, cultural and historical textiles are examined and allow students to develop a knowledge and awareness of textile precedents and how they may be integrated into contemporary textile practices.

88308
Film and Video Design 1
6cp
Undergraduate
This subject provides students with an understanding of the techniques and processes involved in the design of film and video productions with particular emphasis on animation and special effects design. The first (300) level semester involves an introduction to the basic language and technology of animation and special effects design in film and video production and to the roles of the art director and other members of the design team. Subsequent semester units provide students with the experience of script analysis, design research, storyboard design and character design. A series of lectures, screenings and discussions will deal with the history, theory and practice of the screen media. Where possible, students will be presented with the opportunity for appropriate specialisation. It should be noted that this subject is not a film and video production subject but has emphasis on the design aspects of production. The subject is offered only as access is available.

88309
Transportation Design 1
6cp
Undergraduate
This subject provides an introduction to vehicle design and a general understanding of these complex products. The program is essentially project oriented with a theoretical component covering engineering aspects such as basic dynamics, suspension systems, drive layout and their effect on overall design. Ergonomic and aesthetic considerations will also be studied. The subject may include field trips and guest lecturers.

88310
Design and Sustainable Human Futures 1
6cp
Undergraduate
Ecological crisis is now a fact of life. How can and should designers respond? This course explores the options available to designers from a philosophical and pragmatic perspective. Ecodesign covers the connection between searching for a means to achieve ecological sustainability and the everyday practices of the design disciplines. The concepts of social ecology are developed by students, often working in groups. Contemporary initiatives towards providing sustainable benefits are examined. The outcome of the class will be positive action. The main aim is to explore collectively, to encourage students to rethink and reconstruct their own design practices, and to work towards design solutions that facilitate ecological sustainment. The class will determine the outcomes.
Furniture Design 1
6cp; prerequisite(s): a high level of competency in the communication areas of orthographic drawing and 3D representation
Undergraduate
This subject introduces students to furniture design. It examines, through the academic fields of history, design theory, ergonomics and appropriate technology, the methodologies and systems of furniture design. Students will progress through a series of projects and gain a specialised knowledge of the area of design and fabrication of furniture pieces. Students will be expected to realise models and prototypes of their designed works in the later stages of the course. Lectures and workshop classes will be supported by factory and workshop visits.

Design for Theatre 1
6cp
Undergraduate
This subject introduces students to the specialised area of design for performances in theatre spaces. It examines, through the academic fields of history, design methodology, and script analysis, the professional roles of the set and costume designer. This is a multidisciplinary course which will bring students together to solve specific design problems. The first level of this course deals with the various roles of members of the design team and explores the basic language and procedures in theatre. In subsequent semesters, students will develop their specialised knowledge through designing productions of an increasingly complex nature.
Problems will be delivered and assessed by visiting professional performers from a range of areas including drama, opera and ballet.

Cinema and Design 1
6cp
Undergraduate
The subject will study those films of the first 60 years of the 20th century which have had significant impact in terms of their design elements. These elements include mise-en-scène design (production/set design, lighting, costume, special effects), sound design, title design, narrative design, cinematic language (editing) design and design-by-auteur. Also important for the selection of some of the films will be their significance in the context of genre – musical, thriller, sci-fi, comedy – in which each is placed. The selection of these films, from different countries and different eras, will include those which have had either commercial success and/or creative impact.

Environmental Communications 2
6cp; prerequisite(s): 88302 Environmental Communications 1 or approved equivalent
Undergraduate
This subject continues the investigations and format of 88302 Environmental Communications 1, but with a focus on communication and exhibition design in the context of museums.

Illustration 2
6cp; prerequisite(s): 88304 Illustration 1 or approved equivalent
Undergraduate
Continuation of 88304.

Photography 2
6cp; prerequisite(s): 88305 Photography 1 or approved equivalent
Undergraduate
Continuation of 88305.

Textile Design 2
6cp; prerequisite(s): 88306 Textile Design 1
Undergraduate
This subject is a progression from 88306 Textile Design 1. Students will continue to examine surface design concepts, techniques and processes with a focus on resist dying, fabric manipulation, fibres, fabrics and dying techniques. Continued exploration and research into traditional, cultural and contemporary textiles will allow students to continue to develop an awareness of the diversity of textile processes and practices.

Film and Video Design 2
6cp; prerequisite(s): 88308 Film and Video Design 1 or approved equivalent
Undergraduate
Continuation of 88308.
88409
Transportation Design 2
6cp; prerequisite(s): 88309 Transportation Design 1
Undergraduate
This subject further develops the student's understanding of the complexity of designing road vehicles with more detailed design projects emphasising the marketing/design relationship. Other areas of transportation are introduced, accompanied by relevant theory components. Specific design projects initiated by students may be included.

88410
Design and Sustainable Human Futures 2
6cp; prerequisite(s): 88310 Design and Sustainable Human Futures 1 or approved equivalent
Undergraduate
This subject will give hands-on experience to people wishing to practise ecodesign. The program develops the foundation of sustainable design practice laid down by 88310 Design and Sustainable Human Futures 1. In particular, the role of systems thinking in relation to key ecological processes is explored, and the opportunities for ecodesign intervention in real community activities are developed. Projects will range from a feasibility study through to a final evaluation from an ecological perspective. The creation and operation of relational working groups will be an important part of the program. Real projects and clients and site visits are included. Participants are expected to be pro-active and interactive.

88440
Cinema and Design 2
6cp; prerequisite(s): 88330 Cinema and Design 1 or approved equivalent
Undergraduate
The subject will study those films produced since 1960 which have had significant impact in terms of their design elements. These elements include mise-en-scène design (production design, lighting, costume, special effects), sound and image design, title design, narrative design, cinematic language (editing) design and design-by-auteur. The selection of these films, from different countries and different eras, will include those which have had either commercial success and/or creative impact. One or two guest lectures will be given by an industry professional e.g. a cinematographer, production designer, costume designer.

88502
Environmental Communications 3
6cp; prerequisite(s): 88402 Environmental Communications 2 or approved equivalent
Undergraduate
This subject further develops an understanding of environmental communications with increasing emphasis on industry practice.

88503
Film and Video Design 3
6cp; prerequisite(s): 88408 Film and Video Design 2 or approved equivalent
Undergraduate
Continuation of 88408.

88504
Illustration 3
6cp; prerequisite(s): 88404 Illustration 2 or approved equivalent
Undergraduate
Continuation of 88404.

88505
Photography 3
6cp; prerequisite(s): 88405 Photography 2 or approved equivalent
Undergraduate
Continuation of 88405.
88506  
Textile Design 3  
6cp; prerequisite(s): 88406 Textile Design 2  
Undergraduate  
This subject allows students to work with more  
complex treatments of fabric including  
chemical applications, construction and  
deconstruction of cloth. Investigation and  
research into contemporary and historical  
design practice will be applied into a studio  
Based project.

88509  
Transportation Design 3  
6cp; prerequisite(s): 88409 Transportation  
Design 2 or approved equivalent  
Undergraduate  
Continuation of 88409.

88510  
Design and Sustainable Human Futures 3  
6cp; prerequisite(s): 88410 Design and  
Sustainable Human Futures 2 or approved  
equivalent  
Undergraduate  
Continuation of 88410.

88511  
Furniture Design 3  
6cp; prerequisite(s): 88411 Furniture Design 2  
or approved equivalent  
Undergraduate  
Continuation of 88411.

88512  
Design for Theatre 3  
6cp; prerequisite(s): 88412 Design for Theatre  
2 or approved equivalent  
Undergraduate  
Continuation of 88412.

88602  
Environmental Communications 4  
6cp; prerequisite(s): 88502 Environmental  
Communications 3 or approved equivalent  
Undergraduate  
In this subject, students have the opportunity  
to initiate their own project in the environ­ 
mental communications field.

88603  
Film and Video Design 4  
6cp; prerequisite(s): 88503 Film and Video  
Design 3 or approved equivalent  
Undergraduate  
Continuation of 88503.

88604  
Illustration 4  
6cp; prerequisite(s): 88504 Illustration 3 or  
approved equivalent  
Undergraduate  
Continuation of 88504.

88605  
Photography 4  
6cp; prerequisite(s): 88505 Photography 3 or  
approved equivalent  
Undergraduate  
Continuation of 88505.

88606  
Textile Design 4  
6cp; prerequisite(s): 88506 Textile Design 3  
Undergraduate  
This subject takes a more theoretical approach  
to the exploration of textile and surface design.  
Students are encouraged to apply knowledge  
gained from previous levels into a self-directed  
conceptual design project for interior/indus­ 
trial application. Students are encouraged to  
source appropriate / suitable fabrics, research  
into the conceptual use of textiles in the built  
environment and present visual documen­ 
tation of selected textiles and surfaces  
associated with a specific project or site.

88609  
Transportation Design 4  
6cp; prerequisite(s): 88509 Transportation  
Design 3 or approved equivalent  
Undergraduate  
Continuation of 88509.

88610  
Design and Sustainable Human Futures 4  
6cp; prerequisite(s): 88510 Design and  
Sustainable Human Futures 3 or approved  
equivalent  
Undergraduate  
Continuation of 88510.
88611
Furniture Design 4
6cp; prerequisite(s): 88511 Furniture Design 3 or approved equivalent
Undergraduate
Continuation of 88511.

88612
Design for Theatre 4
6cp; prerequisite(s): 88512 Design for Theatre 3 or approved equivalent
Undergraduate
Continuation of 88512.

89012
Design Practice 2
4cp; prerequisite(s): 89914 Design Practice 1 or approved equivalent
Postgraduate
This subject continues on from 89914 Design Practice 1 and provides an understanding of the designer/client interface in environmental and industrial design. Students undertake two individual research and design projects.

89013
Design Case Studies 2
4cp; prerequisite(s): 89912 Design Case Studies 1 or approved equivalent
Postgraduate
A continuation of 89912 Design Case Studies I.

89912
Design Case Studies 1
4cp
Postgraduate
This subject covers the following topics: forms of design practice; the design processes used in the solution of a broad range of design problems; the values employed by designers in their work; and the means by which designs are evaluated. Areas addressed include town planning, landscape design, architecture, interior design, fashion design, textile design, industrial design, film and television production, graphic design, exhibition design. Lectures involve practising designers, who focus on their professional roles, responsibilities and methods.

89914
Design Practice 1
4cp
Postgraduate
This subject covers design methods and techniques of research, decision making and evaluation involved in the practice of design and the designer/client interface. Students work with a designer in the development of a design proposal in the area of exhibition or environmental design or the manufacturing or communication industry. Students undertake two individual research and design projects.

89917
Design Project (P/T)
12cp
Postgraduate
This subject is a program of individual supervised research or design. Assessment is made on submission of an original body of work which usually includes four elements: research, development, evaluation and report. Topics include the following: research, new product development, packaging, pricing, promotion, advertising, product image, test marketing, strategies and tactics for existing products, services and societal marketing, legislation, consumerism.

89918
Design Project (F/T)
24cp
Postgraduate
As for 89917 Design Project (P/T).

89950
Weisbaden
Undergraduate
This subject is used for concurrent studies overseas undertaken by Bachelor of Design students.

89951
University of Brighton
Undergraduate
This subject is used for concurrent studies overseas undertaken by Bachelor of Design students.

89952
Weisbaden
Undergraduate
This subject is used for concurrent studies overseas undertaken by Bachelor of Design students.
89952
St Martin's College of Design
Undergraduate
This subject is used for concurrent studies overseas undertaken by Bachelor of Design students.

99701
Jewellery 1
6cp
Undergraduate
This subject provides students with an understanding of the techniques and processes involved in the fundamental design of jewellery. Through projects, students will examine a number of techniques involved in jewellery construction and explore different media including some traditional processes as well as new and alternative ones. The course also includes visits to exhibitions and introduces students to attitudes concerning the practice and critical analysis of the subject. The subject is workshop based with some field visits.

99702
Jewellery 2
6cp; prerequisite(s): 99701 Jewellery 1
Undergraduate
Continuation of 99701.

99703
Jewellery 3
6cp; prerequisite(s): 99702 Jewellery 2
Undergraduate
Continuation of 99702.

99704
Jewellery 4
6cp; prerequisite(s): 99703 Jewellery 3
Undergraduate
Continuation of 99703.

SUBJECTS OFFERED BY OTHER FACULTIES

21715
Strategic Management
6cp; prerequisite(s): 22747 Accounting for Managerial Decisions; 25706 Economics for Management; 24734 Managerial Marketing; 25742 Financial Management
Postgraduate
This is an integrating subject concerned with top management strategy for, and management of, change in the economic and social environments of business. Case studies from real business situations are examined. Topics include strategy formulation, strategic planning, management audits, management of change, and social responsibility and corporate effectiveness.

21718
Organisation Analysis and Design
6cp
Postgraduate
Develops skills in organisational analysis. Develops diagnostic and prescriptive skills in regard to organisations. Focuses on the description and analysis of organisations as formal structures, political systems and cultural entities.

21720
Employment Relations
6cp
Postgraduate
This subject presents an introduction to the areas of industrial relations and human resource management. Topics covered include historical steps in the development of the human resource function and the forces that have shaped its development; major functions of employment relations managers; the relationship between the human resource and industrial relations functions in the modern organisation; the nature of industrial relations and the contribution to understanding made by several conflict theorists; the structure and functioning of formal industrial relations; the form and function of the employer and employee organisations, parties to employment relations; and the nature of efficiency restructuring and enterprise bargaining and their impact upon the management of employment relations.
21813
Managing People
6cp
Postgraduate
Uses a behavioural science theory and research perspective to diagnose organisational processes. Students learn to apply behavioural science ideas to analyse individual performance issues and organisational processes in the management of human performance at work; relate people management practices to developments in management thought and to changing values in the world of business and administration; critically evaluate the major theories and models that have been developed to explain individual, group and inter-group behaviour in work organisations; and appraise organisational communication practices in the context of organisational diversity.
Provides an introduction to the field of people management; basic individual psychology; motivation, job design and performance management; managing groups at work; self-managing work teams; intergroup behaviour and conflict in organisations; leadership; behavioural aspects of decision-making; and communication for people management.

22747
Accounting for Managerial Decisions
6cp
Postgraduate
Introduces students to the basics of financial and management accounting. Topics include the nature and purpose of accounting, accounting reports (balance sheets, profit and loss statements, cash flow statements) and analysing accounting; accounting reports and financial reports; the nature of management accounting and cost concepts; strategic planning and budgeting; cost accumulation systems (traditional costing systems and activity-based costing systems); and responsibility accounting (the management control structure, and analysing and reporting on performance).

24734
Managerial Marketing
6cp
Postgraduate
Recognises marketing as a key managerial decision-making area, in particular relating the organisation to its environment to bring about change. Drawing extensively on the literature in marketing and marketing management, the subject will adopt a range of teaching approaches to demonstrate the nature and complexity of managerial marketing decision making, and at the same time develop knowledge and skills for effectively managing the complexity of exchange processes.

25706
Economics for Management
6cp
Postgraduate
Provides an intensive introduction to the two major components of economic theory - microeconomics (which deals with the behaviour of individuals, firms and industries) and macroeconomics (which deals with the behaviour of the national and international economies). Provides a working knowledge of the economic environment for managers.

25742
Financial Management
6cp
Postgraduate
Provides the analytical framework for corporate financial decisions. Introduces students to financial theory and to the tools of financial decision making. Concerned primarily with investment project evaluation and determining the financing mix necessary to achieve the firm's financial objectives. Topics include the conceptual basis of financial decisions, accounting statements and cash flow, net present value, the valuation of debt and equity, capital budget issues, risk and return, the capital asset pricing model (CAPM), capital structure - determinants of the optimal balance of debt and equity, dividend policy, and leasing.

28701
Business and the Changing Environment
6cp
Postgraduate
An introductory subject for students who have not undertaken previous business studies, it should be undertaken in the first semester. Examines current and potential environmental changes which can influence the conduct of business, particularly in the Asia-Pacific region. Specifically addresses the major currents of change which are likely to affect the way businesses are managed in the future; business strategies for coping with these changes; the need for multidisciplinary skills
in problem solving; and for the creation of new possibilities and alternatives in business. The subject is presented over five full days, split into two modules of three and two days each. The first module is conducted before the commencement date of formal lectures in each semester.

59336
Politics and Planning
2cp
This unit provides students in planning disciplines with an introduction to the perspectives of political theory and the techniques of political analysis. Topics include theories of the state, the emergence of structures of decision making, urban managerialism, the politics of public participation, community politics and local government. Concepts of modernity and post-modernism are used to situate analysis of urban political action in socio-cultural contexts.

59338
Sociology and Planning
2cp
This unit provides students in planning disciplines with an introduction to the perspectives of the social sciences and the techniques of sociological investigation. Topics include the emergence of the modern city, the development of the spatial pattern, environmental perception, issues in housing, labour markets, tourism and migration, and current social and demographic trends.

INTERNATIONAL STUDIES SUBJECTS

50140
Comparative Social Change
8cp; for undergraduate students
Offered by the Faculty of Humanities and Social Sciences
The aim of this subject is to provide students with an understanding of the processes of modernisation and social change in a comparative context using case studies in countries of Western Europe, Latin America, and East and South-East Asia. The lectures will highlight a number of key issues, including whether the processes of social change are universal or specific; the consequences of modernisation in and for the economy, politics, society, culture and ideology of non-Western societies; and whether the established Eurocentric analytical models are still useful in understanding the modern world. It will be emphasised that differing interpretations of modernisation flow from various relations of power which lead to a multiplicity of views on its meanings and significance.

971111, 972111, 973111, 974111
Chinese Language and Culture subjects

Chinese Unit 1
8cp; 6hpw; prerequisite: nil
Chinese 1 aims at developing in students a survival communicative ability in basic social interactions. It teaches students Pinyin, the official transcription system, as a guide to the pronunciation of the Chinese language, and some basic structures and devices of the language. Students are expected to know about 300 Chinese characters by the end of this unit.

Chinese Unit 2
8cp; 6hpw; prerequisite: Chinese Unit 1
Chinese 2 continues to develop in students a survival communicative ability in basic social interactions. It also introduces some of the basic structures and devices of the language. Students are expected to know about 600–800 Chinese characters by the end of this unit.

Chinese Unit 3
8cp; 6hpw; prerequisite: Chinese Unit 2 or HSC 2/3-unit Chinese
Chinese 3 is the entry point for students who have completed HSC 2/3-unit Chinese and who first learnt Chinese at school in Australia.
Chinese 3 aims at further developing students' oral communicative competence in basic social interactions. More written texts will be gradually introduced to enhance the ability of students to use Chinese characters. The basic structures and devices of the language will be reinforced. Students are expected to know about 1,200 Chinese characters by the end of this unit.

**Chinese Unit 4**
8cp; 6hpw; prerequisite: Chinese Unit 3

Chinese 4 is the second unit for students who have completed HSC 2/3-unit Chinese.

Chinese 4 aims at further developing students' communicative competence in basic social interactions. More written texts are introduced to enhance the ability of students to use Chinese characters. The basic structures and devices of the language are also reinforced. Students are expected to know about 1,600 Chinese characters by the end of this unit.

**Chinese Unit 5**
8cp; 6hpw; prerequisite: Chinese Unit 4

Chinese 5 is the third unit for students who first learnt Chinese at school in Australia and obtained HSC 2/3-unit Chinese.

Chinese 5 aims at further developing students' communicative competence in general social interactions. While reinforcing the macro-skills of reading, writing, listening and speaking, this unit will focus on practical writing skills. Students are expected to know about 2,000 Chinese characters by the end of this unit.

**Chinese Unit 6**
8cp; 6hpw; prerequisite: Chinese Unit 5

Chinese 6 is the fourth subject for students who have obtained HSC 2/3-unit Chinese with basic communicative skills and the ability to undertake In-country Study in China.

Chinese 6 aims at further developing students' communicative competence in general social interactions. While reinforcing basic structures and devices of the language, this unit will further develop students' writing skills. Students are expected to know about 2,500 Chinese characters by the end of this unit.

**Chinese Unit 7**
8cp; 4hpw; prerequisite: a working knowledge of Chinese characters as well as communicative competence in a Chinese language other than Modern Standard Chinese.

Chinese 7 is for students who have a working knowledge of Chinese characters as well as communicative competence in a Chinese language other than Modern Standard Chinese. This unit aims at developing communicative competence to meet students' needs in social and professional interactions where Modern Standard Chinese (also known as Mandarin, Putonghua or Guoyu) is used. Simplified characters, pronunciation, intonation and situational Chinese usages are the focus of class instruction.

**Chinese Unit 8**
8cp; 4hpw; prerequisite: Chinese Unit 7 or equivalent

This unit aims at developing a communicative competence at a more sophisticated level. Students are exposed to a range of Chinese texts in varied sociocultural contexts in order to master the use of Chinese for different purposes, and are provided with opportunities to further improve speaking and listening skills through discussions of the texts and making cross-cultural comparisons.

**Chinese Unit 9**
8cp; 4hpw; prerequisite: Chinese Unit 8 or equivalent

This unit aims at developing in students a high level of communicative competence required for understanding various electronic and published media articles, correspondence and texts related to contemporary society where Modern Standard Chinese (also known as Mandarin, Putonghua or Guoyu) is used. Students are exposed to a range of Chinese texts in order to master the use of Chinese for different purposes, and are provided with opportunities to maintain speaking and listening skills through discussion of the texts.

**Chinese Unit 10**
8cp; 4hpw; prerequisite: Chinese Unit 9 or equivalent

This unit aims at further developing in students a high level of communicative competence in reading and writing to meet students' needs in social and professional interactions. Modern Standard Chinese (also known as Mandarin, Putonghua or Guoyu) is used. Students are exposed to a range of diverse texts from modern Chinese literature, history, language and culture in order to master the use of written Chinese for different purposes, and are provided with further opportunities to maintain speaking and listening skills through discussion of the texts.
French Language and Culture subjects

French Unit 1

8cp; 1st semester, 6hpw; prerequisite: nil

French 1 is the first in a series of four units designed to provide students who have no prior knowledge of the French language with basic survival skills in language and culture and the ability to undertake In-country Study in France.

By the end of the unit, students would be expected to have achieved 'elementary proficiency' and be able to satisfy immediate communication needs required in basic social interaction, using expressions and phrases they have learnt. The program allows for the development of listening, speaking, reading and writing skills, and an understanding of the sociocultural contexts in which the language is used. In particular, students gain an awareness of the background of French-speaking countries. Students also develop strategies for predicting the meaning of new expressions and anticipating ways to express new meanings.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in various social and cultural contexts. Audiovisual equipment and computers will be used to facilitate learning.

French Unit 2

8cp; 2nd semester, 6hpw; prerequisite: French Unit 1 or equivalent

French 2 is the second in a series of four units designed to provide students who have no prior knowledge of the French language with basic survival skills in language and culture and the ability to undertake In-country Study in France.

By the end of the unit, students would be expected to have achieved 'minimum survival proficiency' in speaking, listening, reading and writing and be able to satisfy immediate communication needs and minimum courtesy requirements required in basic social interaction. Students will also develop an understanding of the sociocultural contexts in which the language is used and develop further communication strategies.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in a meaningful way in various social and cultural contexts. Audiovisual equipment and computers will be used to facilitate learning.

French Unit 3

8cp; 1st semester, 6hpw; prerequisite: French Unit 2, HSC French, or equivalent

French 3 is the third in a series of four units for students with no prior knowledge of the French language, or the first in a series of four units for students who have successfully completed HSC 2/3-unit French, or its equivalent. It provides students with basic survival skills in French language and culture, and the ability to undertake In-country Study in France.

By the end of the unit, students would be expected to have achieved communicative competence in speaking, listening, reading and writing skills to be able to satisfy all 'survival' needs and limited social needs. They would also be expected to have developed an awareness of the various social and cultural contexts in which the language is used. In this unit, students develop the ability to understand the general content of magazine and newspaper articles.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in various social and cultural contexts. Audiovisual equipment and computers will be used to facilitate learning.

French Unit 4

8cp; 2nd semester, 6hpw; prerequisite: French Unit 3 or equivalent

French 4 is the fourth in a series of four units for students with no prior knowledge of the French language, or the second in a series of four units for students who have successfully completed French 3, HSC 2/3-unit French, or its equivalent; and equips these students with basic survival skills in French language and culture and the ability to undertake In-country Study in France.

By the end of the unit, students would be expected to have begun to develop the communication skills required to satisfy limited routine social or work demands related to the situation covered. Students would also have developed an awareness of the various social and cultural contexts in which the language is used. Students learn to express opinions, discuss education, entertainment and travel, and develop the language skills and background knowledge required to find accommodation.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in various social
and cultural contexts. Audiovisual equipment and computers will be used to facilitate learning.

**French Unit 5**

*8cp; 1st semester, 6hpw; prerequisite: French Unit 4 or equivalent*

French 5 is the third in a series of four units designed to provide students who have successfully completed French 4, HSC 2/3-unit French, or its equivalent, with the ability to consolidate and extend their knowledge during a period of In-country Study in France.

By the end of the unit, students would be expected to have achieved the communicative competence required to satisfy routine social demands and limited work requirements in speaking, listening, reading and writing skills. They would also be expected to have developed an awareness of the various social and cultural contexts in which the language is used. Students learn to communicate in French and to compare lifestyles, university life and education and practice interview techniques in preparation for In-country Study.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in a meaningful way in various social and cultural contexts. There are discussions and debates on set topics. Audiovisual equipment and computers will be used to facilitate learning.

**French Unit 6**

*8cp; 2nd semester, 6hpw; prerequisite: French Unit 5 or equivalent*

French 6 is the fourth in a series of four units designed to provide students who have successfully completed French 5, or its equivalent with the ability to consolidate and extend their knowledge during a period of In-country Study in France.

By the end of the unit, students would be expected to have achieved the communicative competence required for limited formal and informal conversations on practical and social topics. Students would also be expected to be able to read and write with sufficient accuracy to meet a limited range of social needs and limited work needs. Language development focuses on topics such as economy, class and social stratification, gender roles, religion and beliefs, literature and the arts.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in a meaningful way in various social and cultural contexts. There are discussions and debates on set topics. Audiovisual equipment and computers will be used to facilitate learning.

**French Unit 7**

*8cp; 1st semester, 4hpw; prerequisite: French Unit 6*

French 7 is designed to provide students who have successfully completed French 6, or its equivalent with the ability to consolidate and extend their knowledge of French in preparation for a period of In-country Study in France.

By the end of the unit, students are expected to be able to communicate confidently in French in a wide variety of everyday situations, and to have comprehension skills which enable them to read a wide variety of authentic materials in French. Students are expected to extend their knowledge of present-day French society and culture and to have acquired the vocabulary and linguistic structures necessary to participate in formal and informal conversations with considerable accuracy.

The classroom approach provides students with opportunities to further develop their vocabulary, fluency and accuracy as they use French to respond to authentic texts and to discuss set topics. Students are required to read extensively in preparation for classroom presentations and discussions.

**French Unit 8**

*8cp; 2nd semester, 4hpw; prerequisite: French Unit 7*

French 8 is designed to provide students who have successfully completed French 7, or its equivalent with the ability to consolidate and extend their knowledge of French in preparation for a period of In-country Study in France.

By the end of the unit, students are expected to demonstrate the linguistic skills and cultural awareness required to engage appropriately in a range of formal and informal discussions in social, professional and educational contexts.

The classroom approach provides students with opportunities to further develop their vocabulary, fluency and accuracy as they use French to discuss set topics and to respond to authentic texts, television programs and films. Students are required to read extensively in preparation for classroom presentations and discussions.

German Language and Culture subjects

**German Unit 1**

*8cp; 1st semester, 6hpw; prerequisite: nil*

German 1 is the first in a series of four units designed to provide students who have no prior knowledge of the German language with basic survival skills in German language and culture and the ability to undertake In-country Study in Germany.

By the end of the unit, students would be expected to have achieved 'elementary proficiency' and be able to satisfy immediate communication needs required in basic social interaction, using expressions and phrases they have learnt. The program allows for the development of listening, speaking, reading and writing skills, and an understanding of the sociocultural contexts in which the language is used. Students gain, in particular, an awareness of the background of German-speaking countries. Students also develop strategies for predicting the meaning of new expressions and anticipating ways of expressing new meanings.

The approach adopted is communicative and provides students with many opportunities to interact and use the language in various social and cultural contexts. Audiovisual equipment and computers will be used to facilitate learning.

**German Unit 2**

*8cp; 2nd semester, 6hpw; prerequisite: German Unit 1 or equivalent*

German 2 is the second in a series of four units designed to provide students with no prior knowledge of the German language with basic survival skills in German language and culture and the ability to undertake In-country Study in Germany.

By the end of the unit, students would be expected to have achieved 'minimum survival proficiency' in speaking, listening, reading and writing and be able to satisfy immediate communication needs and minimum courtesy requirements required in basic social interaction. Students will also develop an understanding of the sociocultural contexts in which the language is used and further communication strategies.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in a meaningful way in various social and cultural contexts. Audiovisual equipment and computers may be used to facilitate learning.

**German Unit 3**

*8cp; 1st semester, 6hpw; prerequisite: German Unit 2, HSC German, or equivalent*

German 3 is the third in a series of four units for students with no prior knowledge of the German language, or the first in a series of four units for students who have successfully completed HSC 2/3-unit German, or its equivalent. It provides students with basic survival skills in German language and culture and the ability to undertake In-country Study in Germany.

By the end of the unit, students would be expected to have achieved the communicative competence in speaking, listening, reading and writing skills to be able to satisfy all 'survival' needs and limited social needs. They would also be expected to have developed an awareness of the various social and cultural contexts in which the language is used. In this unit, students also develop the ability to understand the general content of magazine and newspaper articles.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in various social and cultural contexts. Audiovisual equipment and computers will be used to facilitate learning.

**German Unit 4**

*8cp; 2nd semester, 6hpw; prerequisite: German Unit 3 or equivalent*

German 4 is the fourth in a series of four units for students with no prior knowledge of the German language, or the second in a series of four units for students who have successfully completed German 3, HSC 2/3-unit German, or its equivalent. It provides them with basic survival skills in German language and culture and the ability to undertake In-country Study in Germany.

By the end of the unit, students would be expected to have begun to develop the communication skills required to satisfy limited routine social and work demands related to the situation covered. Students would also have developed an awareness of the various social and cultural contexts in which the language is used. Students learn to express opinions, discuss education, entertainment and travel, and develop the language skills and background knowledge required to find accommodation.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in various social
and cultural contexts. Audiovisual equipment and computers will be used to facilitate learning.

**German Unit 5**

*8cp; 1st semester, 6hpw; prerequisite: German Unit 4 or equivalent*

German 5 is the third in a series of four units designed to provide students who have successfully completed German 4, HSC 2/3-unit German, or its equivalent, with the ability to consolidate and extend their knowledge during a period of In-country Study in Germany.

By the end of the unit, students would be expected to have achieved the communicative competence required to satisfy routine social demands and limited work requirements in speaking, listening, reading and writing skills. They would have developed an awareness of the various social and cultural contexts in which the language is used. Students learn to communicate in German when comparing lifestyles, university life and education and to practice interview techniques in preparation for In-country Study.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in a meaningful way in various social and cultural contexts. There are discussions and debates on set topics. Audiovisual equipment and computers will be used to facilitate learning.

**German Unit 6**

*8cp; 2nd semester, 6hpw; prerequisite: German Unit 5 or equivalent*

German 6 is the fourth in a series of four units designed to provide students who have successfully completed German 5, or its equivalent with the ability to consolidate and extend their knowledge during a period of In-country Study in Germany.

By the end of the unit, students would be expected to have achieved the communicative competence required to speak the language with reasonable accuracy, and to be able to participate readily in limited formal and informal conversations on practical and social topics. Students would also be expected to be able to read and write with sufficient accuracy to meet a limited range of social needs and limited work needs. Language focuses on topics such as the economy, class and social stratification, gender roles, religion and beliefs, and literature and the arts.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in a meaningful way in various social and cultural contexts. There are discussions and debates on set topics. Audiovisual equipment and computers will be used to facilitate learning.

**German Unit 7**

*4cp; 1st semester, 4hpw; prerequisite: German Unit 6*

German 7 is designed to provide students who have successfully completed German 6, or its equivalent with the ability to consolidate and extend their knowledge of the German language in preparation for a period of In-country Study in Germany.

By the end of the unit, students are expected to be able to communicate confidently and with a high level of accuracy in German in a wide range of formal and informal conversations, and to have comprehension skills which enable them to read a wide variety of authentic materials in German. They are expected to be able to read and write for academic and general purposes with sufficient accuracy to meet a wide range of social and academic needs.

The classroom approach provides students with opportunities to further develop their vocabulary, fluency and accuracy as they use German to respond to authentic texts and to discuss set topics. Students are required to read extensively in preparation for classroom presentations and discussions.

**German Unit 8**

*4cp; 2nd semester, 4hpw; prerequisite: German Unit 7*

German 8 is designed to provide students who have successfully completed German 7, or its equivalent with the ability to consolidate and extend their knowledge of German in preparation for a period of In-country Study in Germany.

By the end of the unit, students are expected to have achieved a high level of proficiency and speak the language with a high level of accuracy. They will be able to participate in a wide range of formal, informal and academic conversations on topics such as the economy, gender roles, social life, politics and current issues. They will also learn about academic writing and will develop academic skills such as note taking and essay writing in German. They will be expected to read and write
academic and general texts with a high degree of accuracy to meet a wide range of social and academic needs.

The classroom approach provides students with opportunities to further develop their vocabulary, fluency and accuracy as they use German to discuss set topics and to respond to authentic texts, television programs and films. Students are required to read extensively in preparation for classroom presentations and discussions.

971311, 972311, 973311, 974311

Indonesian Language and Culture

Indonesian is offered to UTS students through arrangements with other universities. Students are placed in classes appropriate to their level of competence. The aim of the Indonesian language program is to give students a good working knowledge of modern written and spoken Indonesian and to enable them to express themselves in the language correctly and with reasonable clarity.

971431, 972431, 973431, 974431

Italian Language and Culture subjects

Italian Unit 1

8cp; 1st semester, 6hpw; prerequisite: nil

Italian 1 is the first in a series of four units designed to provide students who have no prior knowledge of the Italian language with basic survival skills in Italian language and culture and the ability to undertake In-country Study in Italy.

By the end of the unit, students would be expected to have achieved ‘minimum creative proficiency’ and be able to satisfy immediate communication needs required in basic social interaction, using expressions and phrases they have learnt. The program allows for the development of listening, speaking, reading and writing skills, and an understanding of the sociocultural contexts in which the language is used. In particular, students gain an awareness of the background of Italian-speaking countries. Students also develop strategies for predicting the meaning of new expressions and anticipating ways of expressing new meanings.

The approach adopted is communicative and provides students with many opportunities to interact and use the language in various social and cultural contexts. Audiovisual equipment and computers will be used to facilitate learning.

Italian Unit 2

8cp; 2nd semester, 6hpw; prerequisite: Italian Unit 1 or equivalent

Italian 2 is the second in a series of four units designed to provide students who have no prior knowledge of the Italian language with basic survival skills in Italian language and culture and the ability to undertake In-country Study in Italy.

By the end of the unit, students would be expected to have achieved ‘basic transactional proficiency’ in speaking, listening, reading and writing, and be able to satisfy immediate communication needs and minimum courtesy requirements for basic social interaction. Students will also develop an understanding of the sociocultural contexts in which the language is used and further communication strategies.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in a meaningful way in various social and cultural contexts. Audiovisual equipment and computers will be used to facilitate learning.

Italian Unit 3

8cp; 1st semester, 6hpw; prerequisite: Italian Unit 2, HSC Italian, or equivalent

Italian 3 is the third in a series of four units for students with no prior knowledge of the Italian language, or the first in a series of four units for students who have successfully completed HSC 2/3-unit Italian, or its equivalent. It provides them with basic survival skills in Italian language and culture and the ability to undertake In-country Study in Italy.

By the end of the unit, students would be expected to have achieved the communicative competence in speaking, listening, reading and writing skills to be able to satisfy all ‘survival’ needs and limited social needs. They would also be expected to have developed an awareness of the various social and cultural contexts in which the language is used. In this unit, students also develop the ability to understand the general content of magazine and newspaper articles.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in various social and cultural contexts. Audiovisual equipment and computers will be used to facilitate learning.
Italian Unit 4
8cp; 2nd semester, 6hpw; prerequisite: Italian Unit 3 or equivalent

Italian 4 is the fourth in a series of four units for students with no prior knowledge of Italian language, or the second in a series of four units for students who have successfully completed Italian 3, HSC 2/3-unit Italian, or its equivalent. It provides them with basic survival skills in Italian language and culture and the ability to undertake In-country Study in Italy. By the end of the unit, students would be expected to have begun to develop the communication skills required to satisfy limited routine social and work demands related to the situation covered. Students would also have developed an awareness of the various social and cultural contexts in which the language is used. Students learn to express opinions, discuss education, entertainment and travel, and develop the language skills and background knowledge required e.g. to find accommodation.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in various social and cultural contexts. Audiovisual equipment and computers will be used to facilitate learning.

Italian Unit 5
8cp; 1st semester, 6hpw; prerequisite: Italian Unit 4 or equivalent

Italian 5 is the third in a series of four units designed to provide students who have successfully completed Italian 4, HSC 2/3-unit Italian, or its equivalent, with the ability to consolidate and extend their knowledge of the Italian language and culture during a period of In-country Study in Italy. By the end of the unit, students would be expected to have achieved the communicative competence required to speak the language with sufficient accuracy for limited informal conversations on practical and social topics. Students would also be expected to be able to read and write with sufficient accuracy to meet a limited range of social needs and limited work needs. Language focuses on topics such as the economy, class and social stratification, gender roles, religion and beliefs, literature and the arts.

The approach adopted is communicative and provides many opportunities for students to interact and use the language in a meaningful way in various social and cultural contexts. There are discussions and debates on set topics. Audiovisual equipment and computers will be used to facilitate learning.

Japanese Language and Culture subjects

Japanese Unit 1
8cp; 6hpw; prerequisite: nil

This is the first subject in the Japanese Language and Culture program. It is designed as the first step in providing students who have no prior knowledge of Japanese with the basic language survival skills and sociocultural awareness to enable them to undertake In-country Study in Japan. While focusing primarily on the development of speaking and listening skills, this subject also provides a working knowledge of the hiragana and katakana scripts and approximately 50 kanji. Sociocultural aspects are integrated into the program as they relate to the need for students to learn to use the language appropriately in various social and cultural contexts.
Japanese Unit 2
8cp; 6hpw; prerequisite: Japanese Unit 1

This is the second in a series of four units for students with no prior knowledge of the Japanese language. By the completion of this unit, the student should be able to demonstrate the language and sociocultural skills required to establish and maintain relationships in social or work-related spheres, and fulfil basic survival needs in a Japanese-speaking environment.

Emphasis is given to the development of speaking and listening skills, but students will also further develop their reading and writing skills. Besides kana, they will know approximately 150 kanji by the end of the unit. Socio-cultural aspects are integrated into the program as they relate to the need for students to learn to use the language appropriately in various social and cultural contexts.

Japanese Unit 3
8cp; 6hpw; prerequisite: Japanese Unit 2 or HSC Japanese

Japanese 3 is the third in a series of four units for students with no prior knowledge of the Japanese language, or the first in a series of four units for students who have successfully completed HSC-level Japanese. By the end of the unit, students are expected to have achieved ‘survival proficiency’ in the use of the language, and be able to satisfy survival needs and limited social demands relating to topics and situations covered.

At the end of the subject, students are expected to have developed their listening, speaking, reading and writing skills to a level where they can communicate in everyday situations, and are able to demonstrate an awareness of the social implications of language and behaviour.

It is expected that students will know approximately 250 kanji by the end of the unit.

Japanese Unit 4
8cp; 6hpw; prerequisite: Japanese Unit 3

Japanese 4 is the fourth in a series of four units for beginners. It is also the second in a series of four units for those who have successfully completed HSC-level Japanese, or its equivalent, and aim to further develop listening, speaking, reading, writing and cultural skills. By the end of the unit, students are expected to have achieved ‘limited social proficiency’, and be able to interact in limited social, study and work contexts with Japanese speakers in Japan or Australia. They will also have learnt approximately 350 kanji.

Japanese Unit 5
8cp; 6hpw; prerequisite: Japanese Unit 4

Japanese 5 is the third in a series of four units in the post-HSC series, and is for those who have successfully completed either Japanese 4, or its equivalent, and aim to further develop listening, speaking, reading, writing and cultural skills. By the end of the unit, students are expected to have achieved ‘limited social proficiency’, and be able to satisfy routine social and limited work demands. The emphasis is on the development of the language and of the cultural sensitivity required in both formal and informal situations. By the end of the subject, students are expected to be able to read and write approximately 470 kanji.

Japanese Unit 6
8cp; 6hpw; prerequisite: Japanese Unit 5

Japanese 6 is the final subject in a series of four units in the post-HSC series and is for those who have successfully completed either Japanese 5, or its equivalent. By the end of this subject, students are expected to have achieved ‘minimal vocational proficiency’, and be able to speak the language with sufficient structural accuracy and vocabulary to participate effectively in many formal and informal conversations on practical, social and limited vocational topics. The emphasis is on the development of the language and of the cultural sensitivity required in both formal and informal situations. By the end of the subject, students should be able to read simple prose and read and write approximately 590 kanji.

Malaysian Language and Culture
Malaysian is offered to UTS students through arrangements with other universities. Students are placed in classes appropriate to their level of competence. The aim of the Malaysian language program is to give students a good working knowledge of modern written and spoken Malaysian and to enable them to express themselves in the language correctly and with reasonable clarity.

Russian
Russian is offered to UTS students through an arrangement with other universities. Students are placed in classes appropriate to their level of competence. The aim of the Russian language program is to give students a good working knowledge of modern written and
spoken Russian and to enable them to express themselves in the language correctly and with reasonable clarity.

971501, 972501, 973501, 974501

Spanish Language and Culture subjects

Spanish Unit 1
8cp; 1st semester, 6hpw; prerequisite: nil

Spanish 1 is the first in a series of four units designed to provide students who have no prior knowledge of the Spanish language with basic survival skills in the language and culture, and the ability to undertake In-country Study in Latin America or Spain.

By the end of the subject, students would be expected to have achieved 'elementary proficiency' and be able to satisfy immediate communication needs required in basic social interaction, using expressions and phrases they have learnt. The program allows for the development of listening, speaking, reading and writing skills, and an understanding of the sociocultural contexts in which the language is used. Students gain, in particular, an awareness of the background of Hispanic countries. Students also develop strategies for predicting the meaning of new expressions and anticipating ways they might express new meanings.

Spanish 1 consists of 78 hours of classroom instruction. The approach adopted is communicative and provides many opportunities to interact and use the language in various social and cultural contexts. Audio-visual equipment and computers will be used to facilitate learning.

Spanish Unit 2
8cp; 2nd semester, 6hpw; prerequisite: Spanish Unit 1

Spanish 2 is the second in a series of four units designed to provide students who have no prior knowledge of the Spanish language with basic survival skills in the language and culture, and the ability to undertake In-country Study in Latin America or Spain.

By the end of the subject, students would be expected to have achieved 'minimum survival proficiency' in speaking, listening, reading and writing, and be able to satisfy immediate communication needs and minimum courtesy requirements in basic social interactions. Students will also develop an understanding of the sociocultural contexts in which the language is used and further communication strategies.

Spanish 2 consists of 78 hours of classroom instruction. The approach adopted is communicative and provides many opportunities for students to interact and use the language in various social and cultural contexts. Audio-visual equipment and computers will be used to facilitate learning.

Spanish Unit 3
8cp; 1st semester, 6hpw; prerequisite: Spanish Unit 2 or HSC Spanish

Spanish 3 is the third in a series of four units for students with no prior knowledge of the Spanish language, or the first in a series of four units for students who have successfully completed HSC-level Spanish, or its equivalent. It provides students with basic survival skills in the language and culture, and the ability to undertake In-country Study in Latin America or Spain.

By the end of the unit, students would be expected to have achieved a communicative competence in speaking, listening, reading and writing skills in order to be able to satisfy all 'survival' needs and limited social needs. They would also be expected to have developed an awareness of the various social and cultural contexts in which the language is used. In this unit, students also develop the ability to understand the general content of magazine and newspaper articles.

Spanish 3 consists of 78 hours of classroom instruction. The approach adopted is communicative and provides many opportunities for students to interact and use the language in various social and cultural contexts. Audio-visual equipment and computers will be used to facilitate learning.

Spanish Unit 4
8cp; 2nd semester, 6hpw; prerequisite: Spanish Unit 3

Spanish 4 is the fourth in a series of four units for students with no prior knowledge of the Spanish language, or the second in a series of four units for students who have successfully completed Spanish 3 and HSC-level Spanish, or its equivalent. It provides students with basic survival skills in the language and culture, and the ability to undertake In-country Study in Latin America or Spain.

By the end of the unit, students would be expected to have begun to develop the communication skills required to satisfy limited routine social and work demands. They would also be expected to have developed an awareness of the various social and
In this subject, students learn to express opinions, discuss education, entertainment and travel, and develop the language skills and background knowledge required e.g. to find accommodation.

Spanish 4 consist of 78 hours of classroom instruction. The approach adopted is communicative and provides many opportunities for students to interact and use the language in various social and cultural contexts. Audiovisual equipment and computers will be used to facilitate learning.

**Spanish Unit 5**  
8cp; 1st semester, 6hpw; prerequisite: Spanish Unit 4

Spanish 5 is the third in a series of four units designed to provide students who have successfully completed Spanish 4 and HSC-level Spanish, or its equivalent with the ability to consolidate and extend their knowledge during a period of In-country Study in Latin America or Spain.

By the end of the unit, students would be expected to have achieved communicative competence in speaking, listening, reading and writing, and to be able to satisfy routine social demands and limited work requirements. They would have developed an awareness of the various social and cultural contexts in which the language is used. Students learn to communicate in Spanish to compare lifestyles, university life and education, and practise interview techniques in preparation for In-country Study.

Spanish 5 consists of 78 hours of classroom instruction. The approach adopted is communicative and provides many opportunities for students to interact and use the language in various social and cultural contexts. There are discussions and debates on set topics. Audiovisual equipment and computers will be used to facilitate learning.

**Spanish Unit 6**  
8cp; 2nd semester, 6hpw; prerequisite: Spanish Unit 5

Spanish 6 is the fourth in a series of four units designed to provide students who have successfully completed Spanish 5 and HSC-level Spanish, or its equivalent with the ability to consolidate and extend their knowledge during a period of In-country Study in Latin America or Spain.

By the end of the unit, students would be expected to be able to speak the language with sufficient accuracy, and to participate in limited formal and informal conversations on practical and social topics. Students would also be expected to be able to read and write with sufficient accuracy to meet a limited range of social and work needs. Language focuses on topics such as the economy, class and social stratification, gender roles, religion and beliefs, literature and the arts.

Spanish 6 consists of 78 hours of classroom instruction. The approach adopted is communicative and provides many opportunities for students to interact and use the language in various social and cultural contexts. There are discussions and debates on set topics. Audiovisual equipment and computers will be used to facilitate learning.

**Spanish Unit 7**  
8cp; 1st semester, 6hpw; prerequisite: Spanish Unit 6

Spanish 7 is designed to provide students who have successfully completed Spanish 6, or its equivalent with the ability to consolidate and extend their knowledge during a period of In-country Study in Latin America or Spain.

By the end of the unit students would be expected to be able to communicate confidently in Spanish within a wide range of everyday situations, and to have further improved their comprehension skills by reading a wide variety of authentic materials in Spanish. Students would also be expected to have extended their knowledge of today’s world-wide Hispanic society and culture and to have acquired the vocabulary and structures necessary to be able to discuss and write about the cultural context of texts with considerable accuracy.

The approach provides students with opportunities to further develop their vocabulary, fluency and accuracy as they use the language to respond to authentic texts and to discuss set topics. Students are required to read extensively during self-study periods in preparation for classroom presentation and discussion.

**Spanish Unit 8**  
8cp; 2nd semester, 6hpw; prerequisite: Spanish Unit 7

Spanish 8 is designed to provide students who have successfully completed Spanish 7, or its equivalent, with a higher level of communicative and cultural competence and the ability to consolidate and extend their knowledge during a period of in-country Study in Latin America or Spain.
By the end of the unit, students would be expected to have further developed the linguistic and cultural awareness skills required to engage appropriately in a range of formal and informal discussions at a social and professional level on topics such as employment, job applications, academic presentations and university life, social welfare, human rights, leisure and sport, the media, family roles and relationships, etiquette, and immediate concerns such as arranging accommodation and banking.

The approach provides students with opportunities to further develop their vocabulary, fluency and accuracy in speaking and writing as they use the language in response to authentic texts such as newspaper, and magazine articles and television programs in Spanish. Students are required to read extensively during self-study periods in preparation for classroom presentations, debates and discussions.

971320, 972320, 973320, 974320

Thai

Thai is offered to UTS students through the language program offered jointly by the University of Sydney and Macquarie University. The program is designed to allow complete beginners in Thai to reach a survival level that will allow them to continue their studies in Thailand. If student numbers permit, classes will be available on UTS campuses.

976111

Contemporary China

8cp; 2nd semester, 4hpw

This subject examines the contours and dynamics of social, political and economic change in the People's Republic of China since the death of Mao Zedong and the start of the reform era. A central theme is the emerging relationship between state and society in a state socialist system in the process of change and reform. It is an introductory subject that requires no prior knowledge of the People's Republic of China or of any Chinese language.

976211

Contemporary Japan

8cp; 2nd semester, 4hpw

This subject provides an introduction to the dynamics of political, social and economic systems in modern Japan. Central themes are the causes and consequences of social change and continuity in the context of Japan's emergence as an economic superpower. In the process, it offers a general introduction to Japan's culture. This subject requires no prior knowledge of Japan or of Japanese.

976301

Contemporary South-East Asia

8cp; 2nd semester, 4hpw

This subject provides an introduction to the countries of Indonesia, Malaysia, Thailand and Vietnam. The themes of modernity and identity will be examined at a political-economic level and also at an individual level. Issues which will be explored include: migration patterns in the context of regional interrelationships; increasing urbanisation; legacies of colonialism; the commodification of culture and the growing impact of tourism; new creative forms in the visual, literary and performing arts; the beliefs about and behaviour of women in the region; and ways in which religion and social practice intersect.

976401

Contemporary Europe

8cp; 2nd semester, 4hpw

This subject is an introduction and an overview laying the groundwork for the study of contemporary Europe. It surveys present-day European Union institutions and sociopolitical developments and provides a comparative study of political and social developments in the countries of Western and Eastern Europe.
It aims to provide students with an understanding of the historical background of present-day Europe and enable them to identify major contemporary policy issues in this region of the world.

976501
Contemporary Latin America
8cp; 2nd semester, 4hpw
Latin America has been a crucible for social, political and economic change in the 19th and 20th centuries. Intense struggles for nationhood, democracy, economic modernisation and secularisation have all resonated in the countries of Latin America. During the middle of the 20th century, Latin America’s primary concerns were focused on national self-determination, inward industrialisation and populist authoritarian efforts to legitimise elite rule. In the late 20th century, the emphasis shifted towards economic growth, internationalisation, and pressures to improve the capacity and accountability of governments. The subject aims to provide students with the historical background, cultural awareness and analytic skills to interpret everyday social, political and economic reality during their period of In-country Study. The subject requires no prior knowledge of Latin America or of Spanish.

977xxx
In-country Study 1
24cp; prerequisite: completion of relevant subjects appropriate to the student’s International Studies major.
In-country Study subjects are only available to students doing the Bachelor of Arts in International Studies.

As part of the International Studies combined degrees, students spend two semesters of In-country Study at a university or institution of higher education overseas. The location is determined by the student’s International Studies major.

In the International Studies Program, students focus on one of the following countries or majors: Argentina, Chile, China, France, Germany, Indonesia, Italy, Japan, Malaysia, Mexico, Russia, Spain and Thailand. The availability of the Russian major is currently being reviewed. There is also a Heritage Major that permits students with previous exposure to a language and culture to continue their study in countries such as Greece, Hong Kong, Korea, Poland, Taiwan and Vietnam.

FACULTY BOARD

FACULTY BOARD IN DESIGN, ARCHITECTURE AND BUILDING

Membership as of 1 July 2000

Ex officio members
Dean of the Faculty
Professor P G Burgess (Chair)
Associate Dean,
Undergraduate Programs
Mr T Laurence
Associate Dean,
Research, Graduate and Industry Programs
Mr S Harfield
Faculty Manager
Mr A Heywood

Nominated members
University Librarian’s representative
Ms J Slater
Centre for Learning and Teaching
Ms A Reid
Faculty Board in Business
Mr D Davis
Faculty Board in Engineering
Mr T Anderson
Faculty Board in
Humanities and Social Sciences
Professor D Kahn

Registered staff members
Ms S Albert
Ms H Antoniades
Mr D Bajaj
Mr E Best
Ms S Best
Mr A Boddy
Mr C Bowman
Dr J Broadbent
Mr P Clarke
Ms A Clifton
Ms L Crawford
Ms A Darcy
Mr G de Valence
Ms G Ding
Ms H Gilbert
Ms J Gothe
Mr W Granwal
Mr R Hayes
Mr P Healy
Ms S Hewson
Mr M Hill
Ms V Horridge
Associate Professor A Karantonis
Mr J Kesteven
Mr V Kokotovich
Associate Professor C Langston
Ms C Lockhart
Ms S Looi
Mr T Loveday
Dr J Oluwoye
Ms K Orr
Dr J Phillips
Ms K Remington
Mr M Roxburgh
Dr G Searle
Mr N Shooter
Dr G Small
Mr P Smith
Mr D Springett
Ms L Thomas
Associate Professor D Tomkin
Mr J Twyford
Associate Professor P Van Sommers
Mr P Waxman
Mr G Wilkie
Associate Professor J Wilson

Elected student members
Mr M Bregazzo
Mr D Higgins
Ms L McGrath
Mr H Murray-Walker
Mr A Pilcer
Ms Z Sadokierski
STAFF LIST

Dean of Design, Architecture and Building
Professor P G Burgess, BArch (Hons) (N'cle), MS (Arch) (Columbia), MPhil (Lond), ARAIA

Associate Dean, Research, Graduate and Industry Programs
S Harfield, BArch (Hons), MArchSt (Adel), MSAHANZ, MCSA

Associate Dean, Undergraduate Programs
T Laurence, BSc (Arch), BArch (UNSW), FDIA

Dean's Unit
Executive Officer to the Dean
L Silbery, JP

Executive Assistant, Undergraduate Programs
D Yelavic

Faculty Office
Faculty Manager
A R Heywood, BADipEd (Macq), GradDipMgt (UWS), MBA (UTS)

Executive Assistant
H A Callanan

Financial Services Manager
S Looi, MNIA

Financial Assistant
A Darcy, JP, DipHRM (SIT), DipBus (OM) (SWIT)

Purchasing and Accounts Assistant
C K H Teo

Services Clerk
P T Lim

Student Administration Manager
S A Hewson

Assessment and Progression Officer
N Singh

Student Advisers
S Albert
A Shooter

Timetable and Facilities Coordinator
R P Wilson

External Relations Officer
C Tjin, BAppSc (Information Studies) (UTS)

Acting Manager, CPE@DAB & Administrative Officer, Research Graduate and Industry Programs
L Cousins, BSc (Hons) (UNSW), MBA (UTS)

Faculty technical resources

Laboratory Manager, Building
G J Moor, StructEngCert (STC)

Technical Officer, Textiles
P P Inwood, CertTypDipTextDes (Wgtin Poly), GradDipDesign (UTS)

Technical Officer, Fashion
M V Spear

Workshop Manager
S Lie, TradeCert Toolmaker, BDesign (Industrial Design) (Hons) (UTS)

Research Librarian, Interior Design
A Joffe, BA (Wits), GradDipLib (Wits)

Production Coordinator, Creative Imaging
K Madigan, BDesign (UTS)

Technical Officer, Photomedia
D Schama

Production Coordinator, Animation and Video
J Mavety

Building Services Officer
M Crocker

Editorial Assistant
S Murray, BA (Hons) (UQld), PhD (Lond)

Program assistants

Land Economics
A Newbold

Architecture
A Finneran

Industrial Design/Interior Design
A Watterson

Visual Communication/Fashion and Textiles
C Kirk

Project Management/Urban Estate Management
E Baker, BA (UNSW)

Construction Management/Building Surveying and Assessment
M Arigho

Postgraduate Design
J Isles

Planning/Construction Economics
L Young
Research staff

ARC SPIRIT Grant – Soft Systems for Soft Projects
K Costello, BA (Hons) (Syd), LLB (UTS)
ARC Collaborative Research Study – Project Management Competence
F Gaynor, BAppSC (Information Studies) (UTS)

Research Assistants, Project Management
A Cequerra
D Loveridge
J Pollack, BA, BSc (UNSW)

Directors of Programs

Architecture
A Boddy, BArch (Melb), MAappSc (Research) (QUT)

Building Surveying and Assessment
K Heathcote, BE (Hons), MEngSc, MCom (UNSW), GradDipEd (SCAE), MIEAust, MAIB

Construction Economics
R Best, BSc (Arch) (Syd), BAppSc (Hons) (UTS), AAIQS, MRICS

Construction Management
P H Clarke, BBuild (UNSW), GradDipEd (Tech) (SCAE), GradDipEdStuds (Computer Ed) (UTS)

Design Postgraduate
M J Hill, CertGroupwork (SAIT), GradDipMedia (AFTRS), MA (Research) (UTS), ASIFA, IASPM, AAA

Fashion and Textiles
V Horridge, MDes (RCA), FGI

Industrial Design
Associate Professor D Tomkin, DipDesign (RMIT), MDes (RCA)

Interdisciplinary Studies
C Lockhart, BA (Industrial Design) (SCA), Graduate Certificate in Higher Education (UTS), MDIA

Interior Design
T Loveday, BArch (SAIT)

Land Economics
G R Small, JP, BSurv, Mcom (UNSW), PhD (UTS)

Planning
G H Searle, BA (Hons) (Adel), PhD (Macq), MRAPI, MIAG

Project Management
L Crawford, BArch (Hons), MTCP (Syd), GradDipHRM (MCAE), FRAIA, FAIB, AVLE (Econ), MAIPM

Urban Estate Management
K Remington, BArch, GradDipEd (Melb), MSAIANZ, MIAB, RAIA, MAIPM

Visual Communication
J W Kesteven, BA (Hons) (UTS)

Architecture

Associate Professor
W Barnett, MPhil (Soton), DipArch (Dunelm), FRSA, FRIBA, FRAIA

Adjunct Professors
J J Greenland, BSc (App), MBDgSc, PhD (Syd)
C R Johnson, BArch (Syd), MBEnv (UTS), MArch (UNSW)

Senior Lecturers
S M Best, BA (Hons), PhD (Syd)
W Granwal, BE (Hons), ME (Auck), MIPENZ, FIEAust, RPEQ
D B Springett, BSc (Arch), BArch (UNSW), RAIA, AlArbA

Lecturers
P J Cantrill, BSc (Arch), BArch (Syd)
A Caro, BArch (NSWIT), MBEnv (UTS), RAIA
J Muir, BArch (UNSW)
J G Phillips, BA (Hons) (Syd), PhD (Lond)
P Thalis, BSc:Arch, BArch (Hons) (Syd), CEAA (Urban Architecture) (Paris–Belleville)
L Thomas, BArch (Bangalore), MArch (Research) (UNSW)

Associate Lecturer
K Orr, BArch (Hons) (UTS)

Honorary Associates
P Georgiades, BArch (Hons) (UTS), RAIA
P Georgiades, BArch (Hons) (UTS)

Building Studies

Professor of Building Studies
D Lenard, BAppSc (Hons), MAappSc (NSWIT), PhD (N’cle), FAIQS, FAIB

Associate Professors
A Karantonis, BEc (UNE), MCom (UNSW), FAII
C A Langston, BAppSc (Hons), MAappSc (NSWIT), PhD (UTS), FAIQS, MRICS, MAIB, MIFMA, MFMA

Adjunct Professors
D Ferry, PhD (S’ton, UK)
M Fiedler, MCom (Melb), PhD (Q’ld), Dip FP, FCPA, FCIS, FCIM, FAil, FSIA
A M Stretton, BE (Tas), MA (Oxf), AMIEAust
Honorary Associates
U De Silva, DipSIng, GradDip (Ed), FRICS, AIQS (Prob), AI Arb
J Threlfall, BA (Cantab), MIMC, CMC
K G Runeson, BA (Hons), MBuild (UNSW), PhD (QUT)
E J Tooher, BSc, BE (Civil) (Syd), MAIPM, MIE Aust
K Yao, MPM (UTS)

Reader in Transport Planning
J O Oluwoye, DipCart/RemSen (BriarCliff Coll, NY), BSc URPL (UWM), MCP (How), PhD (UNSW), MCIT, AITPM, MACSM, MNITP, MREAAA, MAPA, MWCTRS

Senior Lecturers
D Bajaj, BE (MIT), MConstMgt (UNSW), Grad IE Aust PEng, MAACE, MAIB
G de Valence, BEc (Hons) (Syd), MAIB
P L Healy, BE (NUI), DIC, MSc (Lond), MBA (UNSW), MIE Aust, MAIPM
B R Longfoot, BE, MEngSc (UNSW), ASTC, MIE Aust, MAIB
R Lovendeg, MAppSc (UTS), FAIB, AIMM, MAIB
N Shooter, BAppSc (NSWIT), AIMM, MAIB
P V Smith, BAppSc (Hons) (NSWIT), MAppSc (UTS), FAIQS ICECA, MRICS, MAIB, MFMA, MAACE
P Waxman, BA (Hons), DipEd (SUNY), DipEc (Stock), MBA (Wash), PhD (UTS), AIVLE, ASA
S T K West, BBuild, MAppSc (UNSW), GradDipAdultEd (SACE), MEIA, MAIB

Lecturers
H Antoniades, MRE (UNSW), Diploma in Accountancy (MCES)
P B Cashmore, BA, MUP (Melb), GradDipUrbanSociology (SIT), GradDipProp (RMIT)
G Ding, DipQS BSc (Belf), MSc (Salf), MRICS, AA IQS
H Gilbert, BEd (Syd), BAppSc, GAPI
M Gillen, BA (Hons) (Sheff), DipSurv (CEM), PhD (Trent), PG CUTF, ARICS
R Grosvenor, BAppSc (LE) (UTS), AAPI
J Twyford, DipLaw, AI Arb (Aust)

Design
Professor of Design Studies
G Caban, BA, MEd (Syd), DipEd (Syd Teach Coll), GradDipCommunication (NSWIT), MDIA (ED), AADM

Associate Professor
J Wilson, DipADPostgrad (Edin), Graduate Certificate in Higher Education (UTS), MHEd (UNSW)
C Nielsen, MA (Design) (SCA), LF DIA, AADM

Adjunct Professor
T Fry, BA (Hons), MA (Birm), PhD (Birm)

Senior Lecturers
J A Broadbent, BSc, PhD (R’dg), GradDipEnvStudies (Macq), AADM, MDIA
J Gothe, DipGraphicDesign (NAS), BA (Syd), ASTC
R V Hayes, BArch (Syd), MEnvStudies (Macq)
R Trembath, MDesign (UTS), MDIA, AADM
G Wilkie, GradDip T&C Planning (Syd), DipEd (Syd Teach Coll), ARAIA

Lecturers
C Bowman, BA (Hons)
(College of Liverpool Arts), MA (RCA)
C Elliott, BDesign (UTS), BEd
E N Hagen, MDes (RCA)
V Kokotovich, BSc (Purdue), MEd
(Maryland), MA (Purdue), IDSA
B Koopman, BArch (UTS)
D McManus, BA (Curtin)
L McWhinnie, BA (Hons) (Middx)
M Miller, DipAD (Hons) (B’ham), MDes (RCA)
J Raath, Graduate Certificate in Higher Education (UTS)
T Ross, BA (Hons), PhD (Syd)
G Rowe, BDesign (Interior Design) (Hons)
(UTS)
M Roxburgh, MA (UWS)
S Stewart, BArch (Hons) (Syd)
M Stiles, BSc (Arch), BArch (Syd)
K Sweetapple, BDesign (UTS)
D G Thompson, DipArt&Design (Preston Poly), CertEd (Dist) (Hatfield Poly), MCSD
M Titmarsh, BAVisArts (UNSW), LLB (Q’ld), MA (Syd)
N Williams, BDesign (UTS)

Associate Lecturer
A Clifton Cunningham, BDesign (UTS)
