

An Approach of Change Impact Analysis in Web Systems

Zafar Mehboob (B.S. (Comp. Sci.), M.S. (Soft. Eng.))

A Thesis Submitted for the Degree of

**MASTER OF SCIENCE IN COMPUTING SCIENCES
(RESEARCH)**

University of Technology Sydney
Faculty of Engineering & Information Technology

2013

Certificate of Original Authorship

I certify that the work in this thesis has not previously been submitted for a degree nor has it been submitted as part of requirements for a degree except as fully acknowledged within the text.

I also certify that the thesis has been written by me. Any help that I have received in my research work and the preparation of the thesis itself has been acknowledged. In addition, I certify that all information sources and literature used are indicated in the thesis.

Production Note:
Signature removed prior to publication.

 Signature of Student:

Date: 26-03-2013

Acknowledgement

This thesis was completed with the support and guidance of a great number of people whose contribution in various ways to the research and the making of the thesis deserved special mention.

I would like to express my sincere gratitude to Professor Didar Zowghi for her understanding, encouragement and personal guidance, provided me a good basis to conduct this research. I am grateful to Professor David Lowe for his detailed and constructive comments, and his valuable advice to improve the quality of this thesis.

I owe my gratitude to Professor Jaya Kandasamy and Dr. Paul Kennedy Paul for their support, guidance and constructive discussions to finish my research work.

I warmly thank to all the participants took active part in interview based study. I owe deep gratitude to Mr. Mohammad Aamir Khan who gave me the opportunity to conduct the case study in his organisation. I thank to Professor Marco Brambilla from Politecnico di Milano, Italy, for his valuable advice and friendly help in relation to exemplar system study. I am thankful to him for giving me insights into WebML modelling software and provide timely feedback on the WebML design Models. I am truly grateful to my father, mother, brothers and sister for their best wishes, prayers and support.

Lastly, and most importantly, I would like to dedicate this thesis to my father and my dearest mother who formed part of my vision and taught me to keep learning and taking on greater challenges. It would not have been possible to finish my research work without their understanding, patience, guidance, and continual support.

Preface

Some of the work described in this thesis has been published previously in several conference proceedings and international journals:

1. (Mehboob, Z. et al., 2007) describes preliminary research direction, based on the investigation from the state of the art, as discussed in Chapter 2
2. (Mehboob, Z. et al., 2008) describes research investigation toward change impact analysis in Web systems and research scope based on the investigation from the state of the art, as discussed in Chapter 2.
3. (Mehboob, Z. et al., 2009) describes a comparison study and the findings from the comparison of existing architecture level CIA approaches and their relevance in Web systems, discussed in Chapter 2.
4. (Mehboob, Z. & Zowghi, D. 2009) discusses the perspectives on Architecture level Change Impact Analysis in Web Systems Evolution, leads to the findings from the state of the practices in relation to change impact analysis approaches in Web systems projects, discussed in Chapter 4.
5. (Mehboob, Z. et al., 2011) presents a Process Model of Change Impact Analysis (PMCIA) for Web Systems Using Design Knowledge. This work is discussed in Chapter 5.
6. (Mehboob, Z., 2013) presents a comparison study for PMCIA with other similar approach proposed to perform CIA for Web systems.
7. (Mehboob, Z. & Khan, A. M., 2013) presents case study design in brief and investigation results in relation to validate PMCIA, discussed in Chapter 6 and 7.

Table of Content

Chapter 1: Introduction	14
1.1 Overview	14
1.2 Motivation	14
1.3 Problem Establishment	17
1.4 Research Objectives/Questions	25
1.5 Proposed Approach and Justification	26
1.7 Research Approach and Thesis Structure	29
Chapter 2: Literature Review	32
2.1 Introduction	32
2.2 Web Systems	34
2.3 Web Systems Characteristics	37
2.4 Evolution, Nature and Types of Change in Web Systems	43
2.4.1 System evolution	43
2.4.2 Nature of changes	44
2.4.3 Types of change	45
2.5 Web Systems Development	46
2.5.1 Web systems modelling languages	48
2.5.2 Architecture design of Web systems	49
2.5.3 Web systems and information architecture	51
2.5.4 Early identification of change impacts	52
2.6 Change Impact Analysis	54
2.6.1 Change management	54
2.6.2 Overview of change impact analysis	54
2.6.3 Basic change impact analysis mechanism	56
2.6.4 Change impact analysis at architecture level	59
2.7.1 Traceability analysis	61
2.7.2 Dependency analysis	62
2.7.3 Change impact analysis process	65
2.7.4 Change impact analysis tools	66
2.7.5 Existing Web systems CIA techniques	67
Chapter 3: Research Methodology	79
3.1 Introduction	79
3.2 Research Study	79
3.2.1 Purpose of research	81
3.2.2 Types of research questions	83
3.3 Research Design	86
3.3.1 Quantitative research	86
3.3.2 Qualitative research	86
3.3.3 Mixed approaches research	87
3.3.4 Triangulation	88
3.4 Mapping Research Objective, Questions and Strategies	89
3.5 Research Methods	90
3.6 Research Methods for Stage 1	91
3.6.1 Justification of methods selected	92
3.6.2 Data collection methods	92
3.6.3 Data analysis methods	92
3.7 Research Methods for Stage 2	93
3.7.1 Justification of methods selected	93

3.7.2	Data collection methods.....	94
3.7.3	Data analysis methods	94
3.8	Research Methods for Stage 3 (Development, Illustration and Valid)	99
3.8.1	Development of the process model of CIA	101
3.8.1.1	Justification of method selected.....	102
3.8.1.2	Data collection methods.....	103
3.8.1.3	Data analysis method	103
3.8.2	Illustration of the process model approach	104
3.8.2.1	Justification of methods selected	104
3.8.3	Validation of process model approach.....	107
3.8.3.1	Justification of methods selected	107
3.8.3.2	Data collection methods.....	108
3.8.3.3	Data analysis methods.....	109
3.9	Research Reliability and Validity	109
3.9.1	Reliability.....	109
3.9.2	Internal validity.....	110
3.9.3	External validity.....	111
3.10	Ethical Considerations	112
3.11	Chapter Summary	113
Chapter 4: Features of a Change Impact Analysis Approach for Web systems ..		115
4.1	Introduction	115
4.2	Interview Objectives	116
4.3	Research Questions	116
4.4	Interview Study Setting	117
4.4.1	Establishment of the participant criteria	118
4.4.2	Questionnaire development	119
4.4.3	Contacting potential participants	120
4.4.4	Pilot study and refinement	120
4.5	Data Analysis	121
4.6	Analysis Results	123
4.6.1	Features for CIA	124
4.6.2	Frequency distribution analysis of features for CIA.....	125
4.7	Classifications of Needs for Change Impact Analysis	128
4.7.1	Traceability and dependency analysis	130
4.7.2	Process level support	131
4.7.3	Effectiveness of analysis.....	133
4.7.4	Design information reuse.....	135
4.7.5	Understanding specific Web systems characteristics	136
4.8	Chapter Summary	137
Chapter 5: A Process Model of Change Impact Analysis		139
5.1	Introduction	139
5.2	Extensions of Existing CIA Approaches	140
5.3	Using Design Rules and Constraints for PMCIA	141
5.4	Data Model	143
5.4.1	Description of data model.....	147
5.5	Process Model	148
5.5.1	Initial inputs	153
5.5.2	Step#1: Examine initial effects of changes.....	155
5.5.3	Step#2: Examine the ripple effects of change	158
5.5.4	Step#3: Perform architectural changes	161

5.6	Mapping between Identified CIA features and PMCIA	162
5.7	Discussions	165
5.8	Chapter Summary.....	168
	Chapter 6: The Case Study Methodology.....	170
6.1	Introduction.....	170
6.2	Case study - A Research Methodology.....	171
6.3	Case Study Protocol	173
6.4	Case Study Design.....	175
6.4.1	Components of case study design.....	175
6.4.2	Case study site selection	178
6.5	Applying Case Study Design	180
6.5.1	Phase 1: Organisational context.....	181
6.5.2	Phase 2: Examining current CIA approaches (pre-study Analysis)	182
6.5.3	Phase 3: Instantiation of process model of CIA	182
6.5.4	Phase 4: Validation of process model of CIA.....	182
6.6	Data Collection	183
6.6.1	Interviews.....	184
6.6.2	Document inspections, direct observations and discussions /meetings	185
6.6.3	Project documents.....	185
6.6.4	Design decisions repository	186
6.6.5	Meeting observations.....	186
6.6.6	Archival records.....	187
6.7	Data Analysis.....	187
6.8	Reporting	189
6.9	Research Reliability, Validity, and Generalisability.....	189
6.9.1	Reliability.....	190
6.9.2	Construct validity.....	190
6.9.3	Internal validity.....	190
6.9.4	External validity (generalisability)	191
6.9.5	Ethical considerations	191

Abstract

There are currently a high number of Web systems being developed; therefore, any consideration towards improving Web systems development practices will be worthy of research effort. Web systems are intricately interwoven into business processes so as to be supported by those systems. In other words, there are a multitude of fine-grained interconnections between business processes and the supporting architecture. Keeping in view the fine-grained interconnections, any change made in business processes can typically lead to more pervasive changes at the architecture (as compared to traditional software systems). Consequently, there is a much more fine-grained evolution at the architecture level in order to address the intricately interwoven characteristic. Partly as a consequence of the intricately interwoven characteristic, the connection between business processes and the architecture solution are also much tighter than for traditional software systems. Given this tight-connection, any change in business processes often leads to fundamental changes at the supporting architecture. Additionally, while addressing changes in business processes, a single change in architecture may have substantial impacts on other parts of the architecture and result in the ripple effects of the change being made to architecture.

The intricately interwoven characteristics, underpinning fine-grained evolution and the tight connection between business processes and the architecture design tend to differentiate Web systems from traditional software systems. To support the evolution and tight connection between business processes and architecture design, it would be beneficial to identify what needs to be modified in architecture to address business processes changes. Failure in attempts to identify change impacts on the architecture resulting from business processes changes leads to the problem where implementation (detailed design) begins before the impacts (on architecture) are adequately identified. As a consequence, many of the change impacts caused by business processes changes may go undetected or are identified very late and often lead to unnecessary re-work during the later stages of system development. We will refer to the identification of change impact on architecture before detailed design actually begins as “*early identification of change impacts*” in Web systems.

As presented in this thesis, the investigation from current state of the practices form a set of high level features/needs that a change impact analysis approach should support for Web systems. Keeping in view both the industrial perspectives and the issue where implementation (detailed design) actually begins before the change impacts (on architecture) are adequately identified, we proposed a systematic, structured and rigorous approach termed as the process model of CIA (PMCIA). We have captured various elements and necessary components derived both from the state of the art and state of the practice for the development of the process model of CIA. We have validated it with an industrial case study. The case study findings indicate that with the use of process model of CIA, practitioners indeed get support for early identification of change impacts in Web systems project and acquire an increased understanding of employing design information during change impact analysis.
