for the degree of Doctor of Philosophy
University of Technology Sydney
2014**

Certificate of Authorship / Originality

I certify that the work in this thesis has not been previously submitted for a degree nor has it been submitted as part of requirements for a degree except as fully acknowledged within the text.

I also certify that the thesis has been written by me. Any help that I have received in my research work and the preparation of the thesis itself has been acknowledged. In addition, I certify that all information sources and literature used are indicated in the thesis.

Acknowledgements

I would like to thank the many people who supported me on my doctoral journey.

Thanks first and foremost to my supervisor Dr Matthew Kearney, who gave me the space to work in my own way and own style, who was never too busy to provide feedback in a timely manner and who insisted I prepare conference papers based on my analysis. This was a masterful move, resulting in great leaps forward in short spaces of time. Thanks to UTS and Kitty Te Riele, whose superb first year doctoral program for FASS students provided immeasurable support. Unlike many students in other institutions I never felt alone and was provided with countless workshops and opportunities to hone my research skills.

I would also like to acknowledge the professional editing and formatting services provided by Suzanne Eggins from UTS who provided copyediting and proofreading services according to the guidelines laid out in the university-endorsed national ‘Guidelines for editing research theses’.

Two special people who have been with me along every step of this journey since our first day of the doctoral induction are Carmel Patterson and Susanne Franciso. From Skype calls every few weeks, to listening to one another’s presentations multiple times, to Devonshire teas in Canberra, it has been a great comfort having this small group to provide constant support—nothing compares to the understanding of someone going through the same thing. Thanks also to Bron, Sarah, Bronwyn, Kirrily, Amanda, Ingrid and

Sandra, fellow travellers on the doctoral path. And to Leah for a mammoth proofing effort in the final countdown.

Thanks to the schools who participated in phase 1, and in particular the case school, who so generously shared their story with me. The Principal of the case school and the changes he has implemented are truly inspiring, almost enough to make me want to return to teaching for the chance of working with him. Almost, but not quite.

Last but not least, thanks to Mark Petersen and Annette Salter. From endless proofing, to encouragement, to cups of tea, these two have been my constant cheer squad and had unwavering faith that I could complete this project. I could not have done it without you.

Abstract

The thesis explores how secondary schools can embrace a whole-school integrated approach to helping students develop self-regulated learning (SRL) skills. In addition to investigating how a sample of Australian secondary schools currently approach SRL skills development, the study also examines teachers', students' and parents' perceptions of who is responsible for SRL skills development and perceptions of the impact of technology on students' SRL skills.

Following an initial online survey of 54 Australian secondary schools in the Sydney region, the study used purposive sampling to select a best practice case school for detailed investigation. The case school demonstrated strong evidence of a systematic whole-school approach to developing students' SRL skills. To obtain multiple perceptions and to verify interpretations, case school data was collected through semi-structured interviews, questionnaires and document gathering. Qualitative analysis produced a rich, contextualised description of the case school, supported by insights from the quantitative data.

The study's findings highlight the need for schools to determine with stakeholders the roles parents, teachers and students can play in assisting students to develop SRL skills. The data indicates that to support all stakeholders in their roles, schools need to provide appropriate training. Findings also reveal that while students and parents were generally positive about the role of technology as a support for self-regulation, particularly as a research tool, technology can be a major distraction for many students. This finding suggests that educators need to provide students and parents with strategies to optimise the use of technology as a learning tool and minimise its potentially distracting influence on students' self-regulation. The research concludes by proposing guidelines that will assist schools, policy-makers and researchers to implement and further explore a whole-school approach to developing students as self-regulated learners. The study also suggests future directions for researchers.

Keywords: self-regulated learning, SRL, whole-school approach, technology
