ABSTRACT
Interest in architectural tourism that concentrates on adaptively reused heritage buildings is intensifying. But the corresponding documentation, presentation or interpretation of these sites has not kept stride with the digital revolution. This has been due to factors including deregulation of the industry, a deficit of clear sanctioned guidelines as to the documentation of heritage sites and the dominance of private property interests. Public narratives about these sites have been subsequently affected. This thesis investigates this situation, looking at the implications for public memories embedded in reused heritage and suggests ways to enhance access to related narratives. It does so via a specific treatment of built heritage – adaptive reuse and its connection to digital resources. I argue that employing social media is the most feasible, affordable and widely available of all formats that permits an online presence in virtually examining a repurposed structure.

An interest in architectural history is a key driver of architectural tourism but many of the relevant historical resources are often absent and not digitally or publically available. If there was better access to these resources this would certainly contribute to the process of remembrance around these buildings. Whilst archivists can play a major part, other professionals are also needed in this process to ensure the authenticity of materials in providing context or interpretation.

Architectural tourists seek out notable buildings to get in touch with history; this is the prime motivation behind the growth of heritage and architectural tourism. They follow up simulated travel by physically pursuing those sites that stimulate their interest. These two categories of travel are regarded as pillars of the tourist industry today, both in Australia and internationally.

This virtual province has been dominated by forms of media representation that can aid the tourist or casual observer in understanding various developmental phases of a site but would be greatly enhanced by well-sequenced, informed resources accessed free onsite. Online exposure is developing at an unquantifiable rate, with the Internet being the ubiquitous force that drives our everyday existence. Yet, so much of what may already exist digitally and be of interest to the architectural tourist, and others, often remains obscured or lost. There is a real need for archival retention of data as much as much as the buildings themselves, if we are to have balanced, publically accessible resources and comprehensive narratives about our built heritage.

ACKNOWLEDGEMENTS

This thesis has taken longer than I would have hoped, but in many ways the serendipitous nature of what presented itself along the way proved to be more useful and as a result I believe the outcome is a far more thoroughly informed document.

I wanted to thank those people in my life who showed understanding and encouragement along my four plus year journey.

First and foremost, Professor Paul Ashton, my primary supervisor for the majority of this period and Robert Crawford for instilling in me earlier the real need to verify every source and comprehend heritage processes in Australia. This in turn aided me in further career opportunities. I would also like to thank the Graduate School at UTS and Juleigh Slater, FASS Faculty Research Office.

Thanks must go to my family, especially Narelle and Peter for providing a haven of quiet to finalise this thesis. My youngest sister Adele, always supportive of me, no matter what the project. Thanks, too, to Fiona Binns for her professional proof reading, Jennifer Cornwall for her early support and my nephew Joshua for understanding why I might put myself through University at all.

I would also particularly thank my friend Claire Polling for listening and encouraging me, especially in these last few months when circumstances changed continuously and for introducing me to Sigur Ros, a band to listen to whilst writing and thinking in English, as their Icelandic lyrics were no distraction to my thought processes.

I realized that a lot of friends and colleagues would never understand why I was doing this but I do genuinely thank them and they include: Amanda Craze, Mark Wallington, my former colleagues at Willoughby Library, Anne Prichard and Michael Gatiff, Rochelle Kerr, Wendy Lynch, Brian McDonald and the staff at CCG, Karyn McLeod, Kimberly O’Sullivan-Steward, Steve Cassar and Carole Priday, Samantha Sinnayah, Susan Shaw, Michele Hamidi and my oldest friend in the world, Alex Balbi.
